Eugene Foster and Yangdong Pan, Advisors, PSU

ABSTRACT

For many communities, drinking water comes from surface water sources, or source water, such as rivers and creeks. Within the city of Grants Pass, Oregon, this is the case. The Rogue River, which spans 215 miles, beginning near Crater Lake and emptying into the ocean at Gold Beach, is Grants Pass' drinking water source. While the capacity of the Rogue River, in relation to drinking water, is rarely an issue for the City of Grants Pass' Public Works Department, the potential contaminant sources (PCS) from the urban, commercial, and industrial geographical areas of Grants Pass is a concern. In order to deploy treatment processes that are capable of targeting these PCS, it is important to have an idea of where and how these PCS are reaching the storm drains, creeks, and eventually the Rogue River. The purpose of this study was to identify area-specific risk components and how those components spatially aligned with PCS and their locations. Geographic Information System (GIS) analysis and a risk matrix were used to rank the PCS according to risk in relation to Grants Pass' source water intake. PCS ranked as high priority, or exuding the highest risk to drinking water quality, were followed up with on-the-ground surveys. After surveying the high priority PCS, best management practices (BMP) recommendations were made to the City of Grants Pass to better protect the drinking water quality. Branching off of this initial project work came similar studies in many other Rogue Basin communities. With this continued work, improvements were made to streamline the processes, such as recording survey observations. Overall, this project work has led to many discoveries regarding threats to drinking water quality and how to best respond to certain types of threats.

ACKNOWLEDGEMENTS

When one of my graduate advisors, Eugene Foster approached me with information about a group focused on drinking water quality in the Rogue Basin back in December 2017, I certainly was intrigued, but was unsure of what I could offer to the group. My interests were in stormwater quality and macroinvertebrate studies. How could this knowledge be of use within the drinking water realm? Despite my concerns, this was an opportunity I could not pass up. To earn my Master's degree through the completion of a project within my hometown of Grants Pass, Oregon, now that is a dream come true.

I quickly learned, after my first meeting with the newly-formed Rogue Drinking Water Partnership (RDWP), that stormwater and drinking water are absolutely related, especially when stormwater issues directly impact the amount of treatment required to supply clean drinking water to residents. Through the guidance of the Rogue River Watershed Council (RRWC), the City of Grants Pass, and the Medford Water Commission (MWC), a project focused on identifying and prioritizing urban and commercial stormwater concerns was not only created, but successfully completed.

The pilot project was so successful that, to my surprise, the RDWP advocated that the risk matrix, windshield survey, and best management practices (BMP) recommendation processes be applied within other Rogue Basin communities. Not only was I able to be a part of the process to help my hometown and the City of Grants Pass identify PCS, I was also involved in this process for the cities of Cave Junction, Eagle Point, Gold Hill, Rogue River, Shady Cove, and White City, as well as a private drinking water provider (DWP), Country View Mobile Home Estates in Trail.

As a graduate student, I feel fulfilled and content with the work that I have been able to accomplish, which I could not have done without guidance from my advisors, Eugene Foster and Yangdong Pan, John Speece of the RRWC, Jason Canady and Wade Elliott of the City of Grants Pass, Craig Harper of the MWC, Jacquie Fern of the Department of Environmental Quality (DEQ), Greg Stabach of the Rogue Valley Council of Governments (RVCOG), my stepfather, who drove me around for the windshield surveys, my mother-in-law and father for encouraging me, sometimes sternly, to finish my Master's degree, and Eric Siedlecki, my husband and biggest supporter, who provided quality screenshots to use as figures in this report and gave me the intellectual space that I needed on Sunday mornings. Thank you all so much for encouraging me to be the best that I can be!

1.0 INTRODUCTION

1.1 Overview: Source Water Protection

Amongst those in the profession of drinking water treatment, source water is surface and/or groundwater that serves as a source of drinking water. Drinking water providers, either public or private and in the form of water utilities, community governments, or a combination of both, utilize source water assessments (SWA) to help identify threats to drinking water quality. SWAs are provided by the Oregon Department of Environmental Quality (DEQ) and the Oregon Health Authority (OHA) for the state of Oregon, and include important information tailored to each drinking water provider, or public water supplier (PWS), and its drinking water protection area (DWPA), or source area. **Figure 1a.** shows the Rogue Basin boundary, many of the cities within the basin, the river and stream corridors, the 8-hour time-of-travel (TOT), or the distance that potential contaminant sources (PCS) can travel within 8 hours in relation to surface water intakes (indicated with green circles), and a submap with the location of Grants Pass in relation to Portland. The studies and reports included within the SWAs pertain to PCS from certain activities, such as concentrated animal feeding operations, logging and mining sites, and industrial processing, as well as automobile repair shops, fueling stations, high-density housing, shopping malls, heavily-used roads, and others, which appear more densely-populated within urban centers (such as in Grants Pass, **Figure 1b.**, with symbols described in **Figure 1c.**). These PCS and others have been identified as potential threats to drinking water treatment processes and the health and safety of residents within the DWPA, not to mention the impacts to aquatic and riparian organisms.

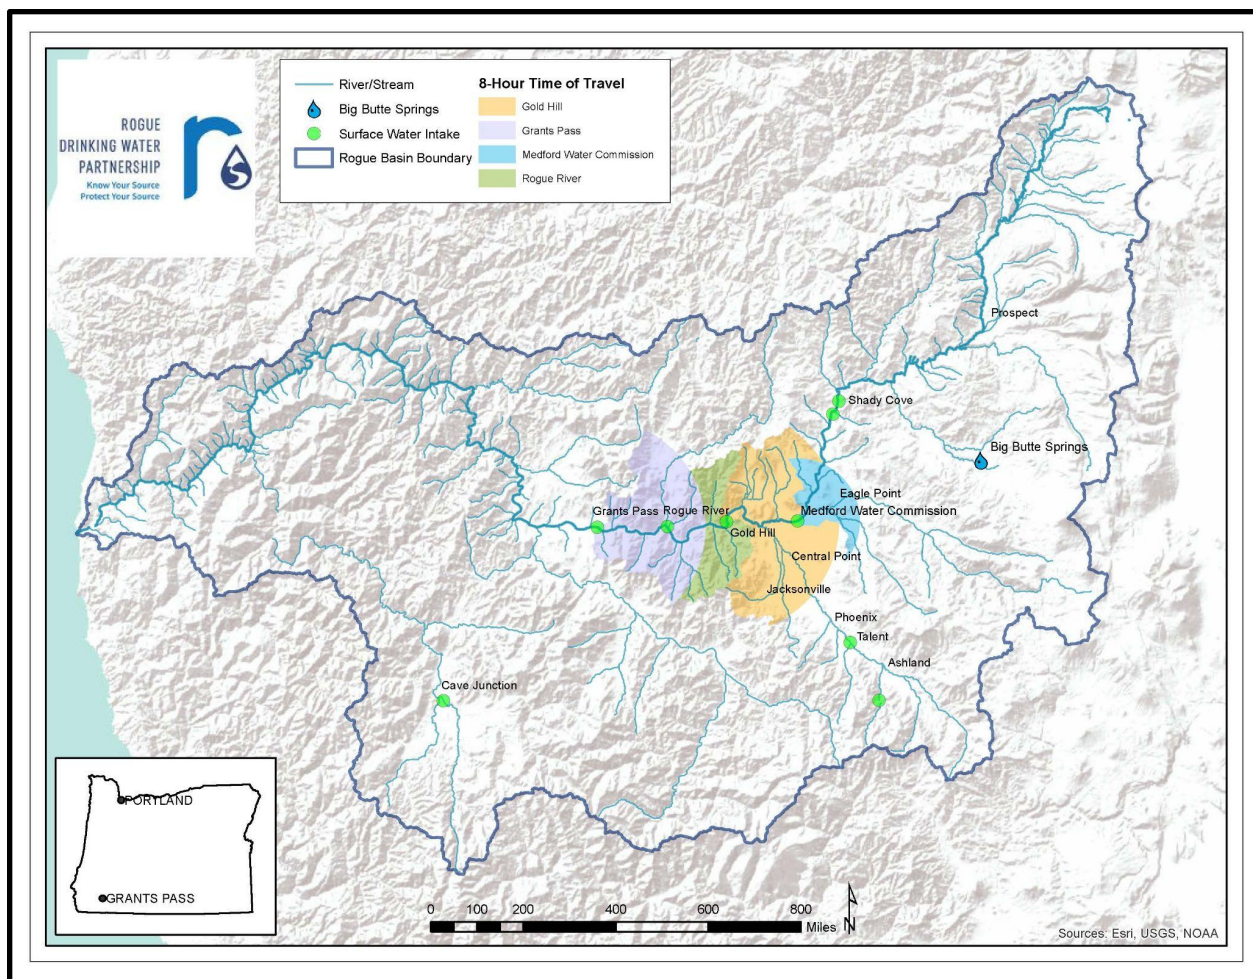

Figure 1a. Rogue Basin with Surface Water Intakes and 8-Hour TOT

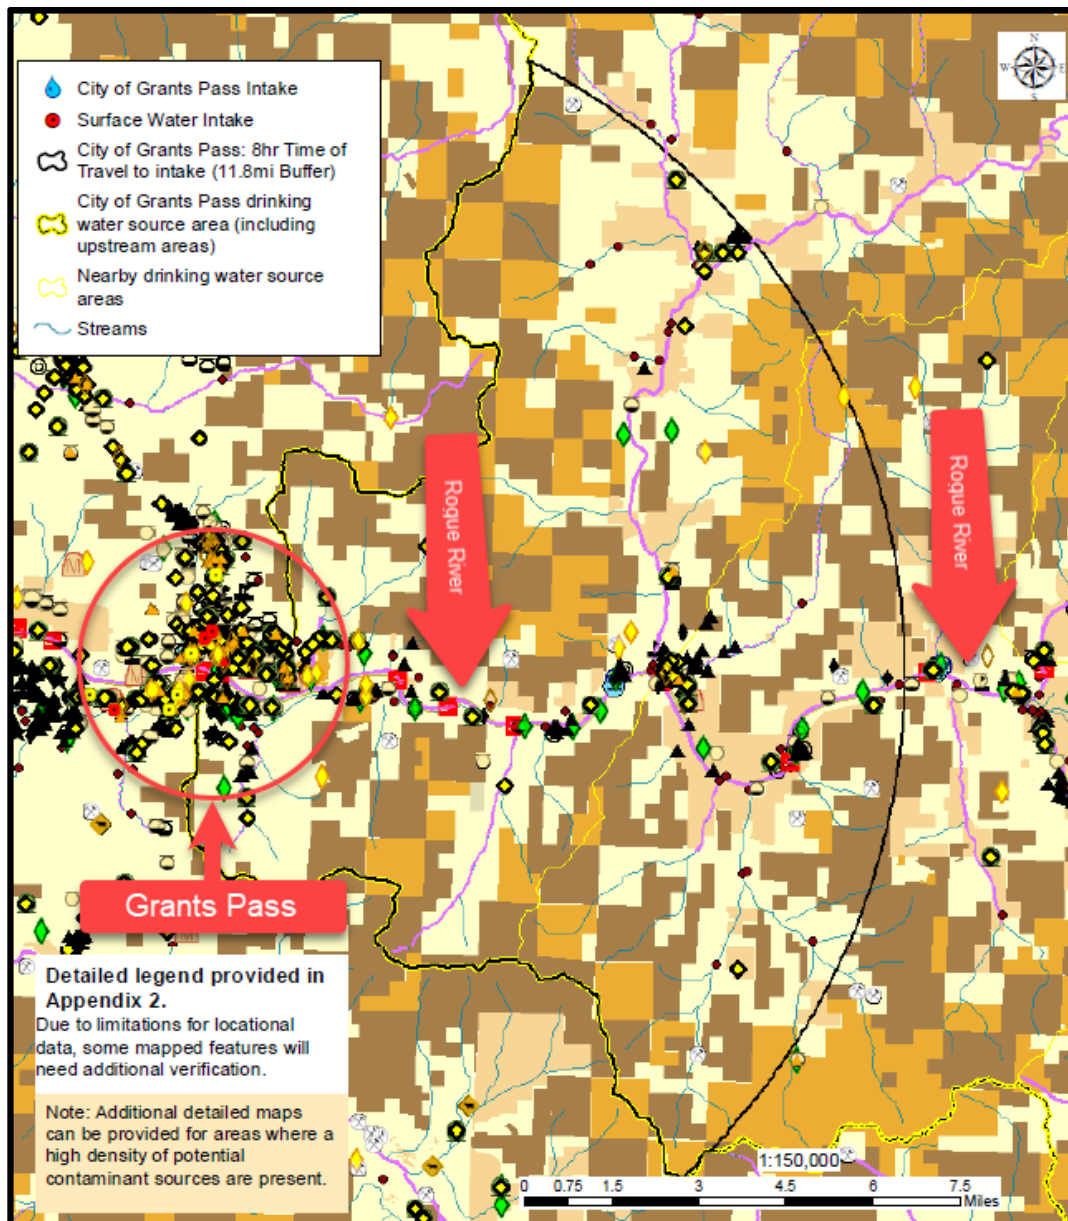

Figure 1b. City of Grants Pass Source Water Area, 8-Hour TOT, and PCS

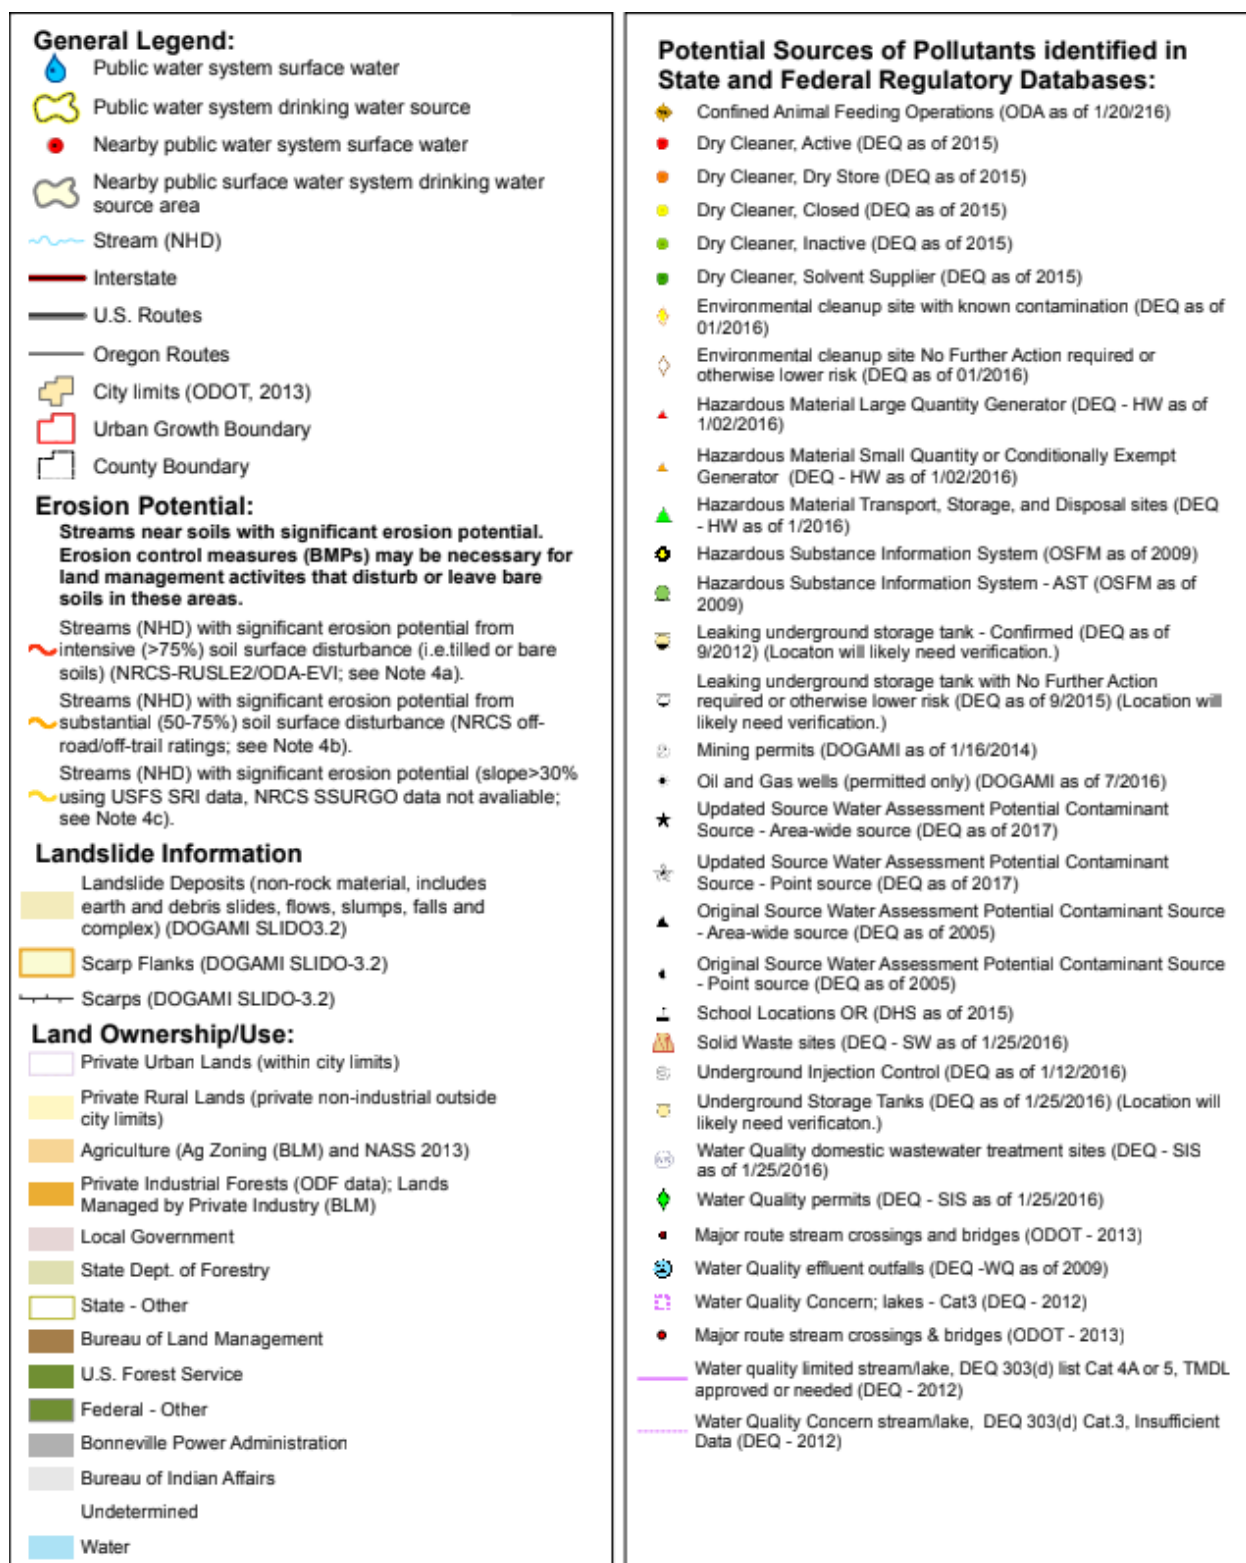

Figure 1c. Legend of Map Symbols from the Updated SWA

The updated SWA for the City of Grants Pass (March 2018; **Appendix A.**), begins with an opening letter from DEQ and OHA, followed by maps, and text, tables, and spreadsheets detailing the DWPA itself and PCS identified within the DWPA. Maps are included that display the following data: the delineated area of the entire Rogue Basin and the locations of surface water intakes (where the source water is collected for treatment), and erosion and soil surface disturbance potential, landslide hazards, landslide ownership and use related to anthropogenic sources and transportation corridors, all of which include the 8-hour TOT. The text, tables, and spreadsheets provide a DWPA summary (land use/ownership percentages, potential pollutants, water quality monitoring data, and treatment methods), additional resources for drinking water providers, and detailed information for each identified PCS.

The Clackamas River Water Providers (CRWP), which is a coalition of municipal water providers that source their drinking water from the Clackamas River, located just outside of the Portland metropolitan area, have utilized the information from their SWAs to develop a drinking water protection plan aimed at providing long-term source water protection strategies. The primary goals of this 2010 plan include identifying, preventing, minimizing, and mitigating the impacts of PCS and promoting public awareness and stewardship of a healthy Clackamas River watershed. Within their drinking water protection plan, the CRWP includes resources on BMPs that private citizens can adopt to help protect drinking water quality. These BMPs are relatively easy to put into practice and include keeping leaves, grass clippings, dirt, pet waste, and litter out of storm drains, planting ground cover, such as shrubs, on bare ground to hold soil in place and prevent erosion, and using non-toxic or less toxic pesticides and herbicides.

More recently, the City of Yachats, located on the central Oregon coast, presented a draft drinking water protection plan at a public meeting in April 2021. The draft plan includes

information from the SWAs for Yachats regarding risks to drinking water quality and PCS.

According to the meeting notes and presentation, the City of Yachats planned to submit a final drinking water protection plan to DEQ and OHA in June 2021.

The SWAs provide drinking water providers an opportunity to establish or build upon source water protection (SWP). Generally, SWP addresses the concerns associated with PCS by implementing behavioral and/or structural BMPs to protect drinking water quality. For example, the Eugene Water & Electric Board (EWEB) has implemented several BMPs to protect source water, such as continuous monitoring equipment and wetland enhancements to treat stormwater runoff. In relation to both SWP and the aftermath of the Holiday Farm Fire of September 2020, EWEB also rallied collaborative erosion control efforts by Pure Water Partners, a program that encourages stewardship of healthy riparian forest areas and provides incentives to landowners to protect and/or restore riparian forests, and landowners, including hydroseeding, check dams, wattles, silt fencing, jute mats, and mulching. These BMPs have proven to aid in SWP.

Efforts to implement SWP measures and BMPs were identified as highly important within Grants Pass. This was due to the upstream locations of several industrial PCS in relation to the surface water intake, which will be discussed in detail within later sections.

1.2 National Drinking Water Issues

According to the Natural Resources Defense Council (NRDC), more than 100 million Americans are being exposed to per- and polyfluoroalkyl substances (PFAS) in their drinking water. PFAS are a class of “forever” chemicals which have been found at levels above the U.S. Environmental Protection Agency’s (EPA) “health advisory” (2019). In order to better protect the health and safety of, first and foremost, our most vulnerable populations of people (i.e. pregnant and nursing mothers, infants, and children), major revisions to the EPA’s Safe Drinking

Water Act are required, with special attention to setting enforceable drinking water standards for PFAS.

Additionally, there are approximately 10.5 million lead service lines delivering drinking water into peoples' homes (2019). Lead contamination of drinking water has predominantly been displayed in Flint, Michigan. During the mid-20th century, Flint experienced great economic success, attributed to the automotive industry. However, the 1980s saw rising oil prices and an increase in imported cars. The economy in Flint began to plummet, as shown by 45% of its population living below the poverty line. Flint fell under state control once a \$25 million deficit was reached, and officials felt the pressure to cut costs to make up for the deficit.

In 2013, City of Flint officials decided to switch water providers from the Detroit Water and Sewerage Department, which utilizes Detroit River as its source, in favor of building a pipeline that would connect to the Karegnondi Water Authority and Lake Huron water, which would save the region \$200 million over 25 years (NPR, 2016). However, until the pipeline could be finished, the City of Flint decided to pipe treated Flint River water to its residents. Over the years, the Flint River has served as a waste disposal and raw sewage dumping site, and also receives agricultural and urban runoff and toxics leaching from landfills. As a highly corrosive drinking water source, lead began to leach away from the piping system and enter residents' homes.

Residents protested that the water was unsafe, which sparked Virginia Tech to conduct a study on the water. According to the study, nearly 17% of the samples collected by residents registered above the federal "action level" of 15 parts per billion (ppb) of lead, the level at which corrective action should be taken. Additionally, 40% of samples tested at 5 ppb of lead, which indicates a very serious problem (NRDC, 2018). Lead contamination is especially harmful to

infants and children, who were exposed for 18 months.

Lead exposure wasn't the only outcome of the switch in water sources. The third-largest outbreak of Legionnaires' disease, which is a severe form of pneumonia, in the U.S. also occurred. City workers found elevated levels of fecal coliform bacteria, and overcorrected that issue by using more chlorine as a disinfectant. However, too much chlorine led to elevated levels of total trihalomethanes, cancer-causing chemicals that are a byproduct of the chlorination of water.

After much court time, city and state officials were ordered to provide bottled water for its residents, as well as replace the lead and galvanized steel piping throughout Flint. As of October 2018, a little over 7,500 pipes have been upgraded, and lead levels within the water remain below the federal action level (NRDC, 2018). While this is good news, the pace at which pipes are being replaced is very slow, which has given the NRDC the opportunity to work with Flint residents to ensure a faster timeline in achieving safe, clean drinking water.

1.3 Local Drinking Water Concerns: Almeda and South Obenchain Fires

On September 8th, 2020, two fires were ignited within the Rogue Valley: the human-caused Almeda Fire, and the South Obenchain Wildfire. The Almeda Fire started in a dry brush field in Ashland along Almeda Drive behind the City of Ashland's Wastewater Treatment Plant, and the South Obenchain Wildfire broke out five miles east of Eagle Point. Due to high winds of more than 40 miles per hour, dry and hot weather conditions, and an abundance of fuel, specifically large colonies of Himalayan Blackberry, the Almeda Fire spread quickly within the Bear Creek Corridor, burning an estimated 3,000 acres and destroying approximately 2,800 structures. From the onset of the South Obenchain Wildfire until the end of September, 32,671 acres were burned.

Potential drinking water quality concerns related to these local fires are elevated levels of aluminum (Al), perfluorinated compounds (PFAS; used for fire suppression), total phosphorus (TP), total organic carbon (TOC), turbidity, and volatile and semi-volatile organic compounds (VOC and SVOC). In the absence of healthy root systems to keep soils in place, these contaminants wash into waterways adjacent to burn areas. It is likely that Al, phosphorus, and TOC are linked to turbidity, in that these materials are bonded and are adhered to soil particles. While natural sources and levels of Al, phosphorus, and TOC exist in soils, current water samples indicate concentrations that have the potential to lead to major losses of macroinvertebrates and fish, as well as harmful algal blooms. As far as human impacts are concerned, the presence of these contaminants requires drinking water treatment facilities to increase their use of coagulants, chlorine, and/or chloramine.

Additional constituents of concern that have been identified following other wildfires, such as the 2015 Butte and Valley Wildfires, the 2017 Tubbs Fire, and the 2018 Camp Fire in Central and Northern California, include: bacteria (*E. coli*), ammonium and nitrates, metals (antimony, arsenic, cadmium, copper, lead, nickel, mercury, and zinc), pesticides and herbicides, polycyclic aromatic hydrocarbons (PAH; dioxins and furans), asbestos, polychlorinated biphenyls (PCB), and disinfection by-products, which are formed when water treatments, like chlorination, react with dissolved organic matter (EOS, 2020). It is important to note that harmful pollutants can also arise within drinking water distribution networks, rather than the source water itself, following urban fire events. For example, following the Tubbs Fire and the Camp Fire, benzene, a known carcinogen, was found in the distribution network, caused by the burning of plastic pipes and other plastics used in urban areas (EOS, 2020).

Following these two fires, many organizations and groups within the Rogue Valley, such as the City of Grants Pass, Jackson County Parks, Jackson Soil and Water Conservation District (JSWCD), the Medford Water Commission (MWC), the Rogue River Watershed Council (RRWC), Rogue Riverkeeper, Rogue Valley Council of Governments (RVCOG), Rogue Valley Sewer Services (RVSS), and many others mobilized to protect water quality. To address erosion and sediment concerns, community volunteers and students were solicited to help these organizations spread seed mixes, including clover and barley, and straw within the riparian zones of the burn areas. Additionally, both in-stream and stormwater outfall water quality monitoring within the burn areas was carried out during rain events. As a result of the successful, collaborative work of these organizations, the Oregon Watershed Enhancement Board (OWEB) announced its support of a funding application to continue post-fire water quality monitoring within the burn scar of the Almeda Fire. With an increased capacity to monitor water quality within Bear Creek, which flows into the Rogue River, drinking water, especially for the communities of Gold Hill, Rogue River, and Grants Pass, may be better protected for its water users.

1.4 Statement of the Problem: City of Grants Pass

Since 1888, the primary drinking water source for residents within Grants Pass, Oregon has been surface water drawn from the Rogue River. The Rogue River also provides drinking water for other communities within the Rogue Valley, habitat for fish and wildlife, and recreational opportunities for thousands of people. The Rogue River spans 215 miles, beginning near Crater Lake and emptying into the ocean at Gold Beach. As such, the Rogue River traverses through varying landscapes, both “wild” (i.e. Western Cascades, Klamath Mountains, and the Kalmiopsis Wilderness) and “domesticated” (i.e. residential, urban, commercial, industrial, and

agricultural). In regard to the “wild” landscapes, Bureau of Land Management (BLM) forest lands, State forests, and other State lands account for 34% of the drinking water source area (DWSA). As far as the “domesticated” landscapes are concerned, private rural and private urban areas account for 41%, private industrial forests amount to 16%, and agricultural lands make up 9% of the DWSA. As the Rogue River travels downstream through forested lands, the water quality is most often described as pristine. Once the Rogue River begins to wind through farmlands, towns and cities, and commercial and industrial areas, the water quality is impacted by PCS and is no longer described as a pristine drinking water source.

For information related to climate, see **Table 1**. Climate, specifically precipitation events (rainfall and snowfall), can lead to a more rapid movement of PCS to storm drains, creeks, and the Rogue River.

Table 1. City of Grants Pass: Climate Information in Comparison to United States Average
Information from BestPlaces.net

Geographic Area	Grants Pass, Oregon	United States (Average)
Rainfall (inches/centimeters)	29.8/75.692	38.1/96.774
Snowfall (inches/centimeters)	2.6/6.604	27.8/70.612
Precipitation (days)	104.4	106.2
Sunny (days)	196	205
Average July High Temperature. (°F/C)	90.7/32.61111	85.8/29.88889
Average January Low Temperature (°F/C)	33.9/1.055556	21.7/-5.722222
Elevation (feet/meters)	942/287.122	2443/744.6264

Of concern within the urban, commercial, and industrial landscapes of Grants Pass are PCS. The major urban, commercial, and industrial centers of Grants Pass are located in the Fruitdale and Skunk Creek stormwater basins (along Highway 99 for Fruitdale Creek and south

of Highway 199 for Skunk Creek; **Figure 5.**). PCS found within these parts of the city include junk, scrap, and salvage yards, metal plating, finishing, and fabrication shops, wood, paper, and pulp processing facilities, and others capable of negatively impacting the City of Grants Pass' public drinking water system and drinking water quality. These impacts come in the form of increased maintenance and operations costs (i.e., clogged filters in need of frequent filter backwashes and/or replacement, expanded uses of chlorine and/or chloramine for treatment, and additional staff time allocated for these procedures), and a higher rate of dissatisfaction among customers associated with the elevated concentrations of disinfectants (i.e., taste and smell).

For example, the City of Grants Pass occasionally receives complaints during certain periods of the year when additional disinfectants need to be used to treat the drinking water (i.e., high turbidity during heavy rainfall events, irrigation season, drought and low water levels, etc.). Some PCS may even pass through filters untreated, posing immediate health threats through consumption of the drinking water. Pairing these issues with that of a water treatment plant “well past its designed life cycle... becoming increasingly difficult and expensive to maintain” (City of Grants Pass: Public Works, 2021), addressing concerns with PCS before they reach the plant is of utmost importance for the City of Grants Pass. To paint a clearer picture of the water treatment plant and its challenges, the City of Grants Pass continues to operate within a plant originally built in 1931. To meet the needs of the continuously-growing city, the plant was expanded in the 50s, 60s, and 80s. Infrastructure failure and subsequent repairs have plagued the plant over the decades. However, in 2017, the Grant Pass City Council identified the replacement of the plant as their number one priority, with construction expected to begin in 2023.

To address the specific issue surrounding PCS, RRWC partnered with the City of Grants Pass and MWC under the Rogue Drinking Water Partnership (RDWP) to expand source water

protection efforts to other PWS areas, as well as to grow the partnership, which will be discussed further in the following section.

1.5 Rogue Drinking Water Partnership

The Rogue Drinking Water Partnership (RDWP) is a collaborative partnership of municipal and private Rogue Basin drinking water providers (DWP) and other organizations, such as RRWC, that seeks to preserve, protect, and enhance drinking water quality from both surface and groundwater sources. The work of the RDWP, funded largely by Drinking Water Source Protection grants from OHA, looks to leverage the interests of many stakeholders to maximize the effectiveness of SWP and to support clean water throughout the Rogue Basin. Actions that prevent, minimize, and mitigate activities that may cause harmful impacts to drinking water quality include implementing BMPs, promoting public awareness and stewardship of drinking water sources, and developing resources and financial support to put in place an action plan, which is the current work of the RDWP. Presently, the RDWP meets quarterly to share project outcomes, improvements, and further actions that need to occur on the drinking water front. For additional information on the RDWP and its Memorandum of Agreement (MOA), refer to **Appendix B**.

Beginning in 2017, the RDWP initiated multiple efforts to protect drinking water quality and combat activities that may harm it, such as PCS associated with urban, commercial, and industrial stormwater, agricultural areas, and forested lands. First, the partnership requested SWAs from DEQ to help identify potential problem areas within the Rogue Basin. Starting in 2018, the RDWP received updated SWAs for the following Rogue Basin communities: the cities of Ashland, Cave Junction, Gold Hill, Grants Pass, and Rogue River, and the municipal and private DWPs, including Anglers Cove/Shady Cove Heights Water Company (Shady Cove,

Oregon), Country View Mobile Home Estates (Trail, Oregon), Hiland Water Company (Shady Cove, Oregon), and MWC (Medford, Oregon and neighboring communities). For its relevance to this report, refer to **Appendix A.** for the City of Grants Pass' updated SWA.

As one of the main applicants for the grants from OHA, the City of Grants Pass, with guidance from RRWC, was responsible for developing a pilot project to move the overall efforts of the RDWP forward. Due to my interests in urban, commercial, and industrial stormwater, paired with source water quality concerns related to Grants Pass' industrial area and its location directly upstream of the surface water intake, the following goals, objectives, and tasks and deliverables were developed for the surveys that began in December 2018.

1.6 Goals, Objectives, and Tasks and Deliverables

Goals

1. Identify and prioritize the risks of PCS within the urban, commercial, and industrial geographic areas of the DWPA for the City of Grants Pass.
2. Determine the site-specific BMPs that can be implemented to potentially reduce those risks, such as secondary containment, catch basin media inserts, emergency spillways, check dams, wattles, and silt fencing, among several others.

Objectives

1. Address and limit the impacts of chemicals and other pollutants on drinking water quality.
2. Establish protocols for identifying and ranking PCS to be used by municipalities, DWPs, and conservation organizations, utilizing readily-available resources.
3. Create a list of BMPs associated with specific PCS.

Tasks and Deliverables

1. Produce a ranking system using available data, Geographic Information System (GIS) analysis, local recommendations, and the updated SWAs to determine the risks (low, moderate, and high) of each PCS.
2. Establish a replicable field strategy for locating and surveying the impacts of urban and commercial PCS that threaten DWPs and treatment processes.

3. Create an interactive database of implementable BMPs addressing erosion and pollution prevention, and runoff and sediment controls, to protect drinking water quality.
4. Enhance the protocols (field strategy, ranking system, and BMP database) developed for the City of Grants Pass, and apply them within other Rogue Basin communities.

2.0 METHODS

2.1 Study Area

As mentioned in the overview, each DWP is responsible for maintaining the health and safety of its DWPA. For the City of Grants Pass, this area extends in a northeastern direction, or upstream, past both the city limits and the urban growth boundary (UGB; **Figure 2.**). In addition to this DWPA, the City of Grants Pass must also take into account the 8-hour TOT, or the distance that PCS can travel within 8 hours in relation to surface water intakes (**Figure 3.**) in order to respond quickly to spills and other emergencies related to drinking water quality.

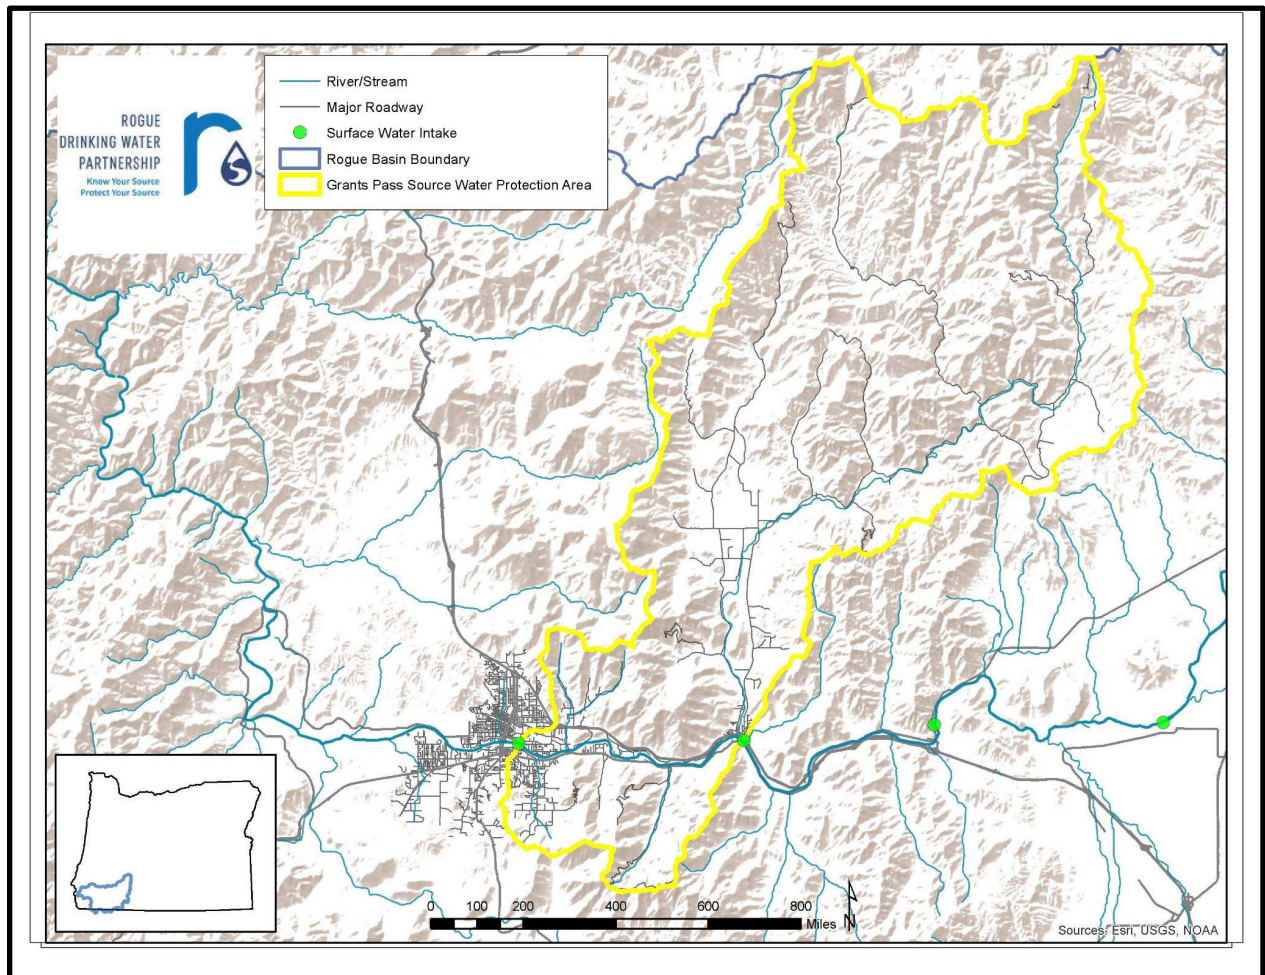

Figure 2. City of Grants Pass: DWPA

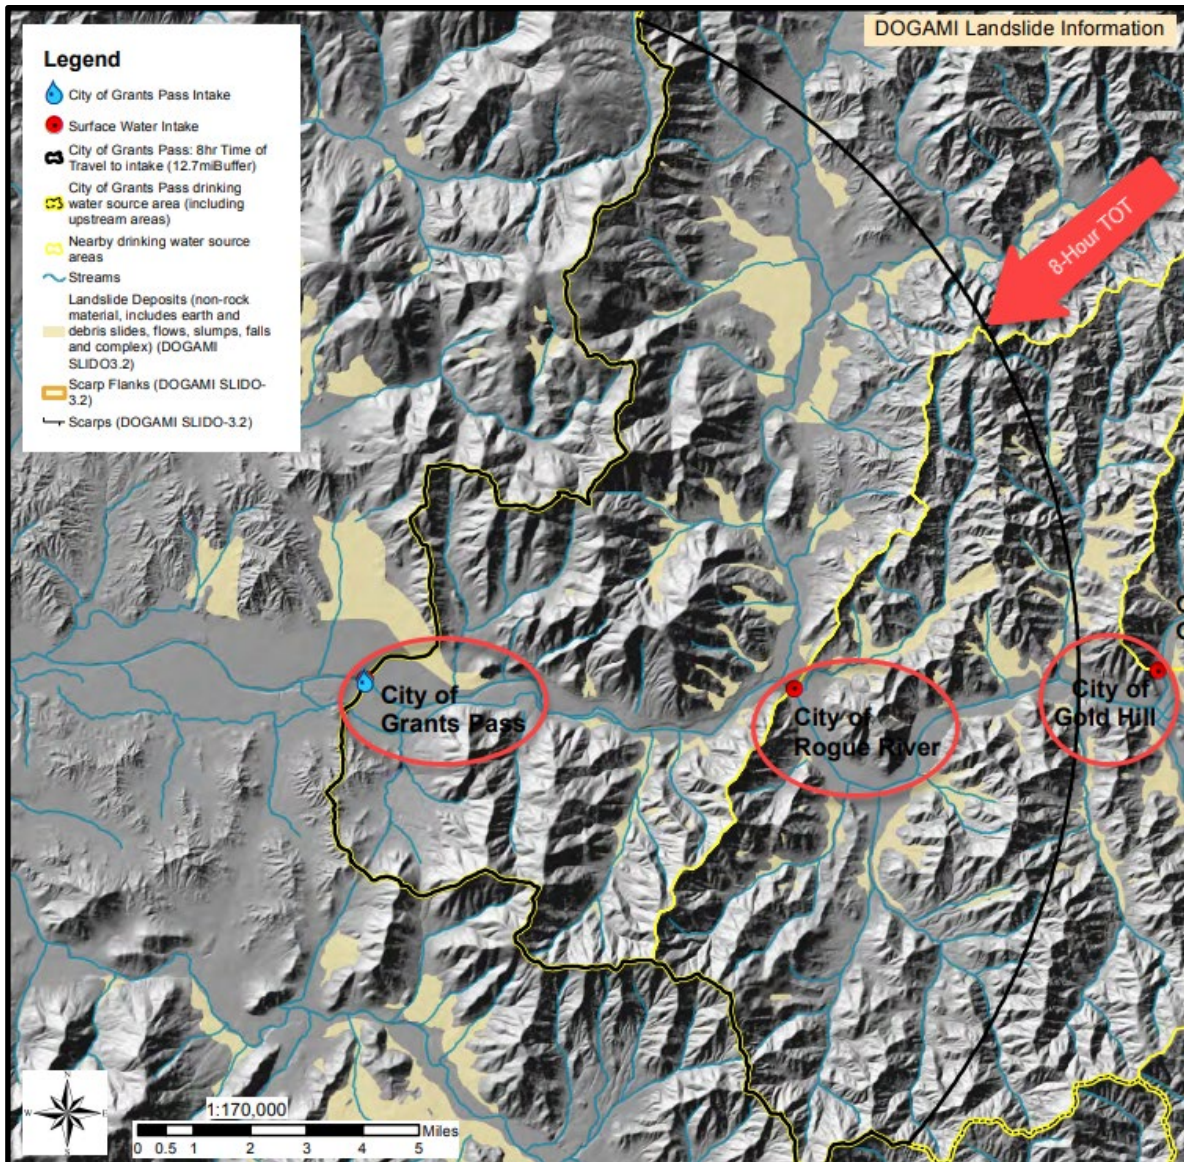

Figure 3. City of Grants Pass: 8-Hour TOT

With its stormwater utility in mind, which manages runoff to avoid flooding, water pollution, and streambank erosion, the City of Grants Pass has organized its stormwater infrastructure (i.e. systems of drains, pipes, culverts, ravines, and creeks) into stormwater basins. There are seven stormwater basins within or surrounding the UGB (shown as a red line; **Figure 4**). Runoff that enters a storm drain within the Gilbert Creek stormwater basin, for example, will empty into Gilbert Creek, and eventually the mainstem Rogue River.

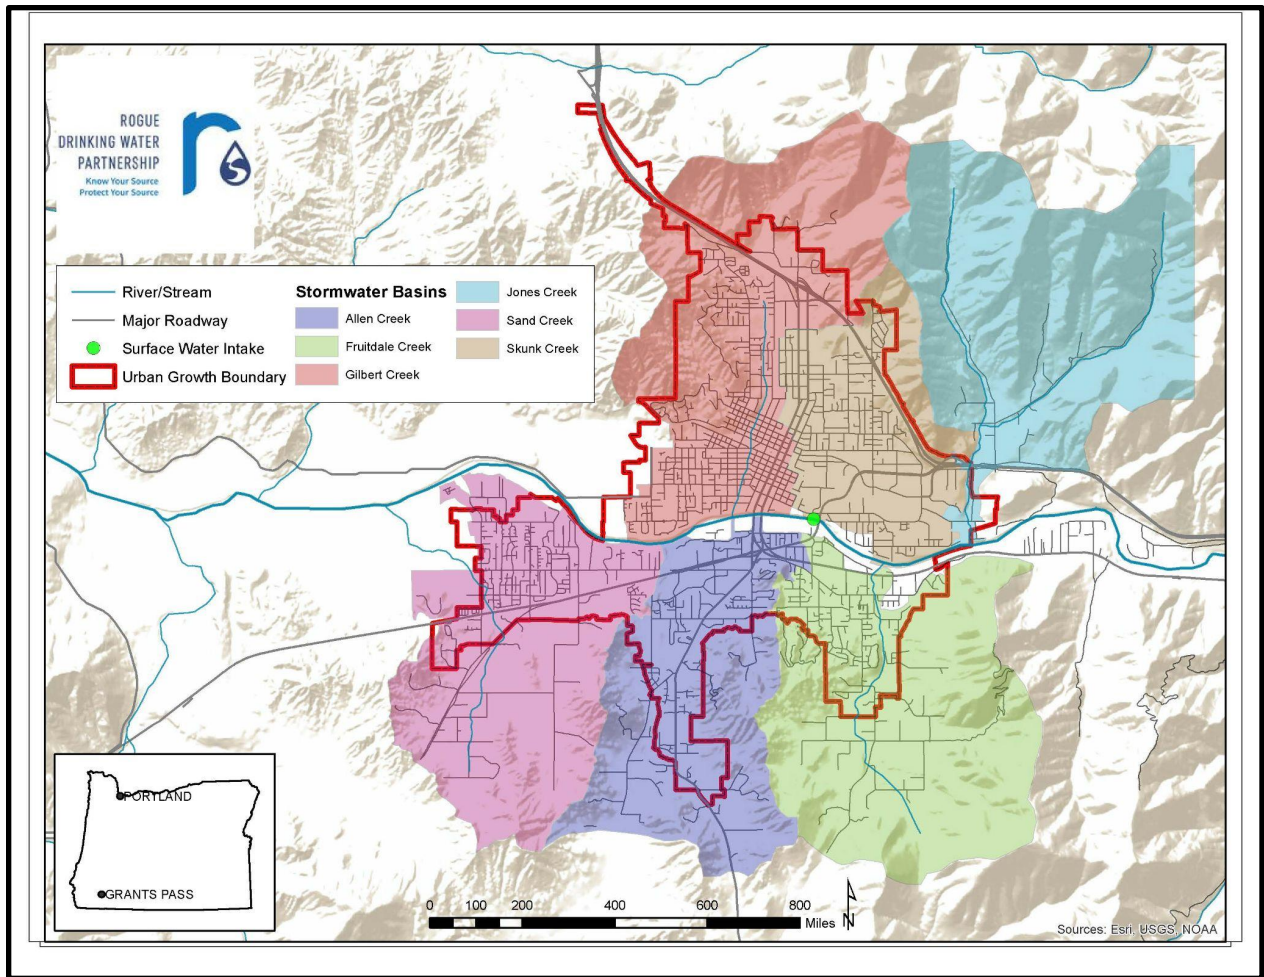

Figure 4. City of Grants Pass: Stormwater Basins and UGB

The Fruitdale, Jones, and Skunk Creek stormwater basins were prioritized for PCS identification, and encompassed the study area due to their proximity and locations directly upstream of the drinking water intake, which is shown as the green circle (**Figure 5.**). Within the study area, commercial and industrial PCS were identified and evaluated to determine the immediate risks to drinking water quality.

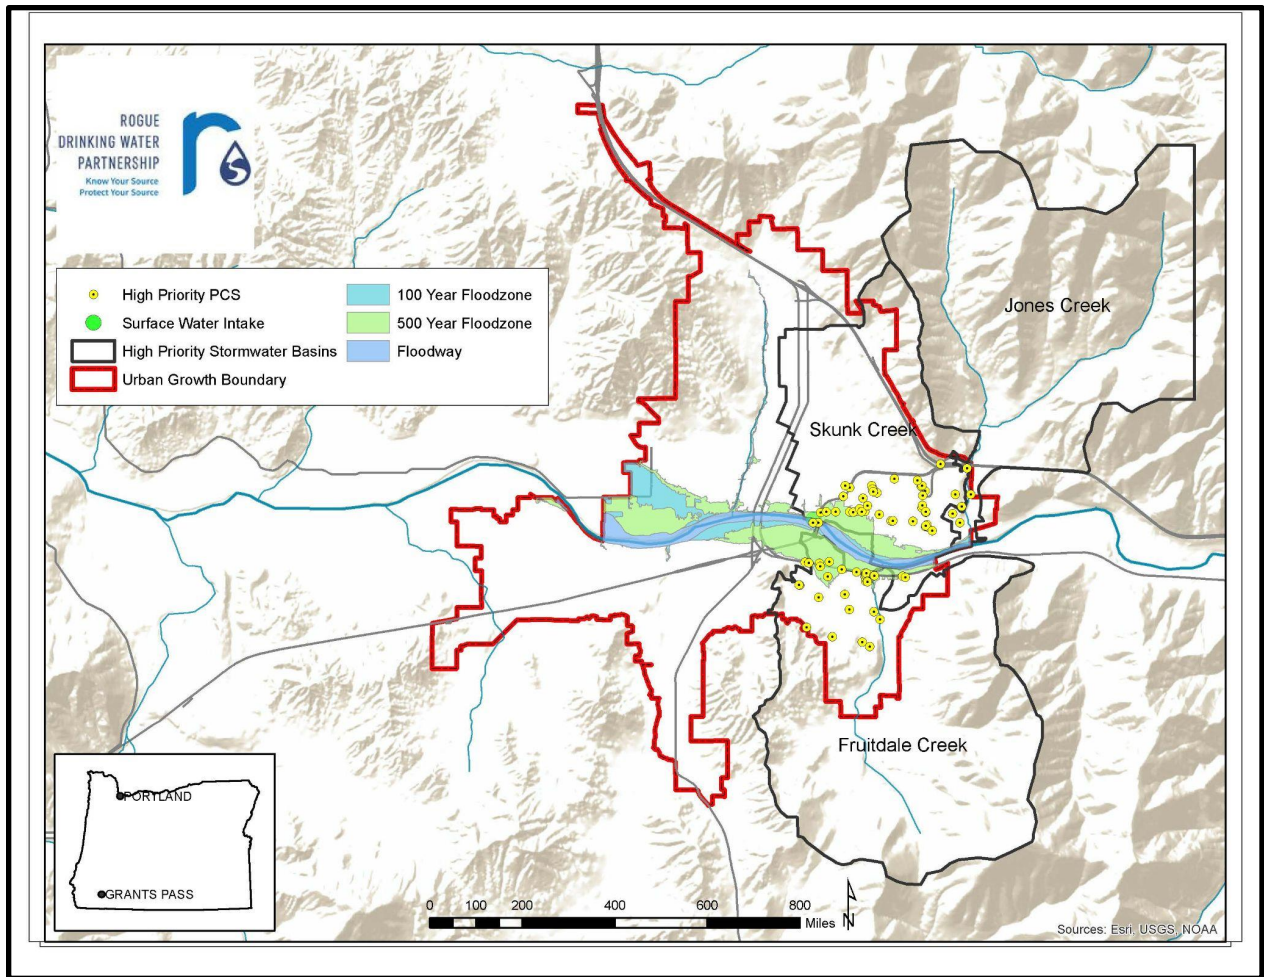

Figure 5. City of Grants Pass: High Priority Stormwater Basins and PCS

Expanding on the prioritization process, if a PCS (fuel, gasoline, or diesel from a major spill, for example) enters one of these three stormwater basins and the drinking water treatment plant is notified, plant operators and other responders may shut down the surface water intake and utilize emergency response strategies to protect the source water. Understanding the close proximity of the three creek inlets in relation to the intake, those responding to a spill or other pollutants must act in haste to avoid drawing in contaminated source water. As for creek inlets farther upstream and/or downstream of the intake, the threat is not as immediate, although response is still required to protect the source water. This is an emerging topic within the Rogue Valley and one that will be discussed later in this report.

The highest priority PCS (yellow circles) are all located in the Fruitdale, Jones, and Skunk Creek stormwater basins and within the UGB (red line; **Figure 5.**). These high priority PCS were determined through the development of a risk matrix containing multiple components and associated scoring, which will be discussed in detail within the following section.

2.2 Study Approach

The framework for this study was developed from both the available information in the SWAs and the updated source water assessments (USWA; January 2018) and recommendations from the City of Grants Pass. The framework aimed to identify the total number of PCS within Grants Pass through the creation of a risk scoring matrix. The risk matrix helped to identify highest priority urban and commercial PCS after being applied within a pre-screen and prioritization of sites using GIS. Following the results of the GIS analyses, windshield surveys to verify priority PCS occurrence and locations were conducted. Conducting windshield surveys, or visual surveys, is an easily utilized strategy. These surveys do not necessarily require the surveyor to leave the seat of their field vehicle to record information. Instead, the only information that is documented is what they can determine when viewing that area from inside the vehicle, or outside from a distance. Additionally, pollutant risks to PWS intake were calculated and BMPs and actions to address those risks were identified (to be discussed in detail within the following paragraphs). All of this information was communicated to the City of Grants Pass following the completion of this pilot project (**Figure 6.**).

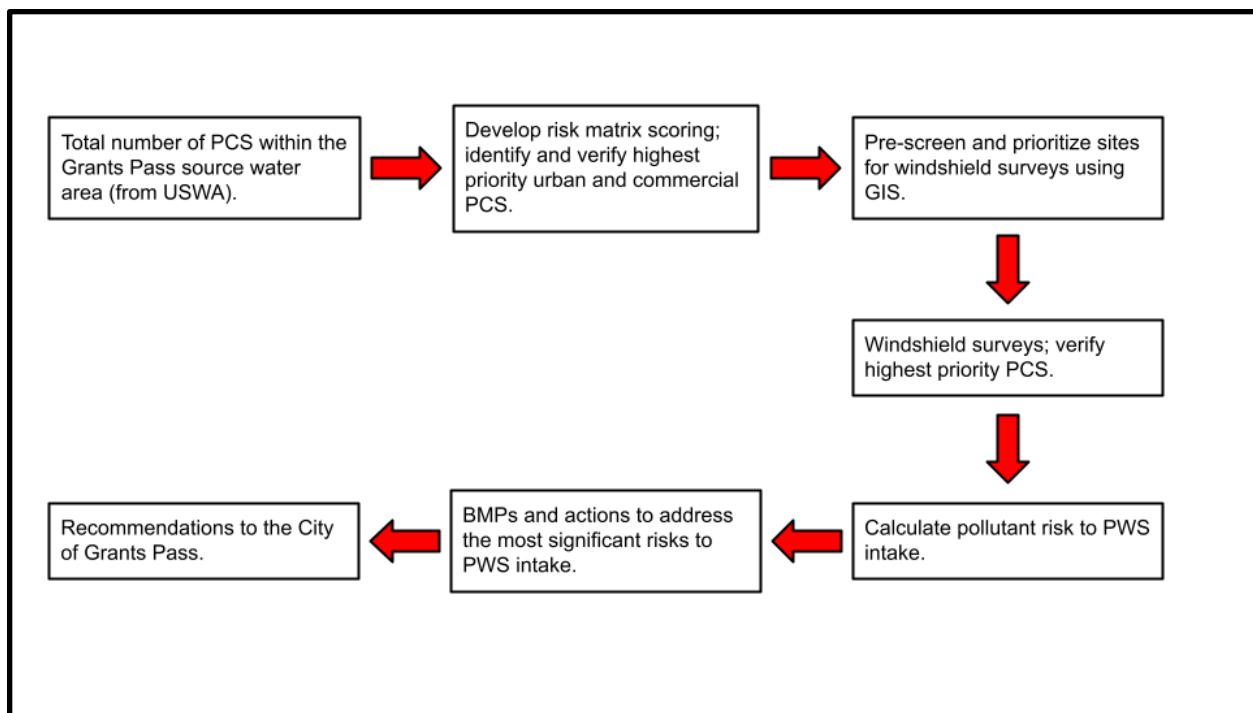

Figure 6. Flow Chart of Study Design

2.3 Total Number of PCS within the Source Water Area

Utilizing and narrowing down the information from the USWA and a supplementary Excel file with all PCS for several cities within Oregon provided by DEQ, it was determined that a total of 214 PCS can be found within Grants Pass. However, it is important to note that one location can be categorized as having multiple PCS. For example, Fruitdale Elementary School is categorized as 1. C20 - Parking Lots/Malls >50 Spaces, 2. M28 - Underground Storage Tank (UST) - Status Unknown, and, of course, 3. R15 - Schools. To simplify later procedures, each location was noted for having multiple PCS types and duplicate locations were deleted from the windshield survey list, which is discussed in detail in the Windshield Surveys section of this report.

2.4 Risk Matrix

As mentioned above, using both the available information in the USWA and recommendations from the City of Grants Pass, a risk matrix was developed for numeric ranking of priority PCS within the City of Grants Pass' source water area. The following sections share details related to the inspiration for and the development of the risk matrix.

In May of 2018, the RDWP invited Karl Morgenstern from EWEB to discuss risk assessment and contingency planning during a quarterly meeting. Morgenstern presented on EWEB's "scoring system for magnitude criteria" from a 1995 Environmental Risk Assessment of the McKenzie Watershed, which aimed at identifying risks to Eugene's sole source of drinking water. This scoring system provides a ranking, general description, and an example for each category from a series of five, as seen in **Table 2**. We used this scoring system as an example to develop a risk matrix to apply within Grants Pass. This risk matrix included components known to pose risks to drinking water quality, along with associated scoring, to help pinpoint high priority PCS.

Table 2. EWEB's Scoring System for Magnitude Criteria

SCORING SYSTEM FOR MAGNITUDE CRITERIA		
Ranking	General Description	Examples
1	Inactive sites or small volumes and/or low toxicities	Markets, motels, decommissioned service stations, masonry business
2	Small to moderate volumes and/or moderate toxicities	Schools, animal clinics, feed stores, welding, small auto repair, small manufacturing, logging and construction companies
3	Moderate to large volumes and/or toxicities	Auto repair, medium sized manufacturing, active service stations, powerhouses
4	Large volumes and/or moderate high toxicities	Storm sewer outfalls, cleaners, forestry activities
5	Large to very large volumes and/or high toxicities	Hazmat truck accidents, large manufacturing plants, fish hatcheries

Using data from the City Utility Systems and Area Hazards interactive maps from the City of Grants Pass, recommendations from the Public Works Department, and the updated SWA from DEQ, the following risk components were included in the risk matrix (**Appendix C.**) to identify the highest priority PCS to address:

1. Stormwater basin (City Utility Systems),
2. Proximity to waterway* (recommendations from the Public Works Department),
3. Surface water risk (updated SWA),
4. Flood hazard (Area Hazards), and
5. Jurisdiction (City Utility Systems).

*With the assumption that PCS located closer to waterways pose a higher risk than those located farther from waterways, "proximity to waterway" was included in the risk matrix.

Each risk component is associated with a set of scoring and descriptions (seen in **Appendix C.**). For example, **Table 3.** depicts the stormwater basin risk component. To receive a score of 0, the PCS must have been located within the Allen, Gilbert, or Sand Creek stormwater basins. PCS within the Allen, Gilbert, and Sand Creek stormwater basins are downstream of the drinking water intake and do not pose a threat to the City of Grants Pass' drinking water quality.

On the other hand, PCS within the Fruitdale and Skunk Creek stormwater basins are directly upstream of the drinking water intake, and therefore pose a greater risk (score of 4).

Table 3. Stormwater Basin Risk Component, Scoring, and Descriptions

1. Stormwater Basin:	
Score:	General Description:
0	Gilbert/Allen/Sand creeks are downstream of the drinking water intake
1	“Needs Basin ID” is upstream of the drinking water intake, but does not cover any urban or industrial areas
2	Jones Creek is farther upstream from the city center, but does cover industrial areas
3	Skunk/Fruitdale creeks cover the city center, industrial areas, and are both mostly upstream of the drinking water intake

Stormwater Basin Data from the Interactive Maps, City of Grants Pass.

Applying the five risk matrix components and associated scoring, as well as the PCS location data from the updated SWA to GIS, each PCS received a total score. The overall risk matrix scoring ranges for low (L), moderate (M), and high (H) risk PCS are 1-4, 5-8, and 9-13, respectively.

2.5 GIS Analysis

GIS analyses were used to pre-screen and prioritize sites for the windshield surveys. Available data and the appropriate GIS analysis was used to reduce the PCS count to complete the surveys in the timeframe for this project. To complete the analyses, data, including the USWA Excel file with PCS information and GIS layers, was downloaded and added to ArcMap:

- Stormwater basin layer from the City of Grants Pass,
- Ditches and waterlines layer,
- USWA Excel file with PCS information, including surface water (SW) risk ratings (H, M, and L),
- Federal Emergency Management Agency (FEMA) floodplain layer (including the categories “floodway,” “100-year flood,” “500-year flood,” and beyond), and
- UGB layer.

An “area of interest” polygon was created using the Editor tool. This area of interest captured both the city limits and the UGB for Grants Pass. Data was clipped to this area and scores/rankings were added for each of the data files for use in the prioritization.

For example, a high (H) risk PCS within 0 – 500’ of a waterway, in the 100-year flood zone, and inside of the UGB would have scores 2, 3, 2, and 2, respectively. Associated scores were manually added to the attribute table, which was then exported to Excel to calculate total scores. The example PCS above receives a score of 9, which categorizes it as a high risk PCS. All high risk PCS sites were visited in Grants Pass, unless they were located outside of the UGB. Full instructions for applying the risk matrices to GIS are available in **Appendix D**.

2.6 Windshield Surveys

The windshield surveys were conducted to verify, in the field, the highest priority PCS. Windshield survey site visits were identified based on the scoring results of the PCS using the risk matrix. As mentioned in the previous section, PCS that received an overall score of between 9 and 13, except those that landed outside of the UGB of Grants Pass, were surveyed. For example, a location with a score of 9, but lying outside of the UGB, was not surveyed. This decision was made based on the City of Grants Pass’ position to offer BMP suggestions to property owners and/or businesses, as well as their authority to issue violation notices in the case of illicit discharges or improper behaviors in relation to PCS following several warnings.

With the paired down list of PCS locations (highest priority PCS within the UGB), these locations were then listed in a geographical order or route that created a logical starting point and ending point (**Appendix E.**). This document guided the windshield surveys and allowed for note-taking (e.g. business is closed, subdivision is developed/no longer requires attention, etc.). In addition to this document, a 5-page inspection worksheet (**Figure 7.**), adapted from a collaborative RVSS and MWC document, was filled out for each location. The full inspection worksheet is available to view in **Appendix F.**

Figure 7. First Two Pages of the Inspection Worksheet

Site information collected included the name, address, and phone number of the business, date and time of inspection, name of inspector, stormwater basin (Fruitdale Creek, Jones Creek, or Skunk Creek), and activity at the site. Questions pertaining to visual sheen, ground disturbance, oil, gas, and chemical storage, erosion prevention and sediment control, stormwater BMPs, and others were asked throughout the worksheet regarding the appearance at each of the sites. Information obtained through completing the worksheets was transferred to a windshield

survey database (Excel spreadsheet) for ease of viewing, sorting, and filtering the data. Overall, reviewing the inspection worksheet data and the pictures that were captured at each location using a digital single-lens reflex (DSLR) camera (examples below in **Figures 8a., 8b., 8c., and 8d.**), paired with the information included in the BMP Database (to be discussed in the following section), allowed for the recommendation of site-specific BMPs to protect drinking water quality.

Figure 8a. Closed Business

2.7 Public Water Supply Intake Risk

To best protect source water, PWS are usually most concerned with PCS that are categorized as posing the highest risk to surface water, which is information found within the USWA. **Table 4.** lists some of the more common PCS types found within Grants Pass that pose

the most concern in relation to surface water quality, and usually require immediate BMP implementation to protect source water.

Table 4. PCS Types in Grants Pass with a High SW Risk

PCS Code	PCS Type	Surface Water Risk
C07	Chemical/Petroleum Processing	H
C14	Junk/Scrap/Salvage Yards	H

C20	Parking Lots/Malls >50 Spaces	H
C26	Wood/Pulp/Paper Processing and Mills	H
M06	Auto - Gas Stations - Historic	H
M32	Construction/Demolition Area	H

2.8 BMP Database

Description

A BMP Database was created to assist DWPs and others with determining site-specific BMPs (**Appendix G.**). The BMP Database includes a variety of management strategies (e.g., proper fluids handling) and/or products (e.g., hydrodynamic separators) that can be implemented to protect drinking water quality. The BMP Database is organized in three tabs within an Excel spreadsheet:

1. BMP Inventory,
 2. Assigned BMP, and
 3. Master Lists.
- Within the BMP Inventory tab, the user will find designated BMP codes, names, descriptions, types, and sources for each BMP. The codes are only applicable within the BMP Database and do not have any secondary meaning. BMPs are categorized under the following types: erosion prevention, pollution prevention, runoff controls, and sediment controls. Sources, such as the Association of Clean Water Administrators (ACWA), are included to allow the user to investigate BMPs further.

- The Assigned BMP tab includes PCS codes, “Activity at Site” descriptions, the surface water risk rating (low, L; moderate, M; high, H), and designated BMP codes and names. Each PCS code and “Activity at Site” may have multiple BMP options. For example, Wells – Abandoned (M61) is associated with multiple potential BMPs to implement, such as: Equipment Maintenance (BMP34), Secondary Containment (BMP49), and Site Stabilization (BMP52). DWPs and other organizations may choose to implement just one of the BMPs or all three, depending on the costs linked to each of the BMPs.
- Lastly, the Master Lists tab includes all of the “Activity at Site” descriptions for PCS found within the City of Grants Pass, according to the SWA. Also, the BMP types are listed here to allow for a drop-down option under “Type” in the BMP Inventory tab.

Application

In order to use the BMP Database, DWPs and other organizations will need to have the PCS codes for their locations of interest, or the USWA Excel file with PCS information (**Appendix H.**) that was utilized for GIS mapping and analyses. This spreadsheet includes PCS information for several cities within Oregon. To determine the PCS codes associated with a particular location:

- Hold down Ctrl + F and enter the business name and/or address. Depending on the location, there may be multiple entries with the same information, but each entry may have a different PCS code.
- Record the relevant PCS codes, close the Excel spreadsheet, and open the BMP Database.
- Once the BMP Database is open, navigate to the Assigned BMP tab and either scroll down to find the PCS code associated with the location of interest, or hold down Ctrl + F to search for the PCS code. Depending on the PCS code, there may be several potential BMPs to implement at that particular location. Additional information for the BMPs can be found on the BMP Inventory tab. DWPs and other organizations may choose to investigate BMPs further by entering the BMP source in a search engine.

3.0 RESULTS

3.1 Applying the Risk Matrix to GIS

The risk matrix components (stormwater basin, proximity to waterway, surface water risk, flood hazard, and jurisdiction) and scoring (**Appendix C.**) were analyzed in ArcMap to prioritize and target the highest priority PCS among the 214 total PCS recorded within the SWA for Grants Pass (**Figure 5.**). Detailed procedures for the application of the risk matrix and PCS information to GIS are provided in **Appendix D.** The attribute table from this initial narrowing down of the PCS was exported to an Excel spreadsheet and then examined for duplicate PCS, of which there were several. Duplicate entries from multiple SWAs (from 2005, 2008, 2013, 2015, 2016, 2017, and 2018) were combined and PCS known to no longer exist, based on information from Google Maps and local knowledge, were removed.

Further narrowing down of the PCS list using GIS analyses brought the total number of locations to survey to nearly 50 PCS. Within the final list of 50 PCS sites, 22 were categorized by PCS code and those that posed the highest risk for surface water include, but are not limited to, the following:

- C04 - Auto/Repair Shops (4/22 PCS, ~18%; gasoline, oil, coolant, and other automotive chemicals),
- C07 - Chemical/Petroleum Processing/Storage (10/22 PCS, ~45%; variety of chemicals),
- C14 - Junk/Scrap/Salvage Yards (1/22 PCS, ~5%; gasoline, oil, coolant, and other automotive chemicals),
- C15 - Machine Shops (1/22 PCS, ~5%; variety of chemicals),
- C20 - Parking Lots/Malls >50 Spaces (1/22 PCS, ~5%; stormwater),
- C26 - Wood/Pulp/Paper Processing and Mills (2/22 PCS, ~9%; variety of chemicals), and
- M26 - Underground Storage Tank (UST) - Confirmed Leaking but listed NFA (3/22 PCS, ~14%; heating oil, gasoline, and other types of stored chemicals).

The final list included 39 high priority PCS, 22 of which were categorized by PCS code, to survey within Grants Pass (a subset of high priority PCS and scores are included in **Table 5.**,

Figure 5. shows the locations of the high priority PCS, and a complete list of the PCS surveyed is available in **Appendix E.**).

Table 5. Subset of High Priority PCS Sites Surveyed

Common Name	Address	Basin	Prox2Water	SW Risk	Flood Hz	Jurisd	Total

3.2 Windshield Survey Findings

After recording the inspection worksheet findings into the windshield survey database (a subset shown in **Table 6.** and the complete database in **Appendix I.**) and revisiting the survey data and photos, it was determined that 22 of the 39 high priority PCS within Grants Pass required follow-up in the form of BMP implementation, whether behavioral or structural.

Table 6. Subset of Entries and Survey Responses Included in the Windshield Survey Database

Facility Name	BMPs	Functioning?	Stormwater Controls Observed	Photo #
Automania Car Sales (Moved)	No	N/A	N/A	4488

Heating Oil Tank	N/A	N/A	N/A	N/A

3.3 Using the BMP Database

Utilizing information from the USWA Excel file (**Appendix H.**), specifically PCS codes associated with “Activity at Site” descriptors, each PCS was assigned site-specific BMPs with the goal of protecting drinking water quality. For example, Brakes Plus (**Figures 9a.** and **9b.**), an auto repair shop in the Fruitdale Creek stormwater basin, was assigned several BMPs. These BMPs are prescribed for PCS codes C04 (Auto - Repair Shops) and C07 (Chemical/Petroleum Processing/Storage) and include, but are not limited to, the following runoff controls and pollution prevention practices seen in **Table 7.** and **Table 8.**

Table 7. BMPs Associated with PCS Code C04

PCS Code	Activity at Site	SW Risk	BMP Code	BMP Name
C04	Auto - Repair Shops	M	BMP30	Spill and Leak Prevention
C04	Auto - Repair Shops	M	BMP31	Spill Clean-Up
C04	Auto - Repair Shops	M	BMP32	Proper Fluids Handling
C04	Auto - Repair Shops	M	BMP33	Drain, Cover, and Contain Oily Parts Stored Outside
C04	Auto - Repair Shops	M	BMP34	Equipment Maintenance
C04	Auto - Repair Shops	M	BMP36	Housekeeping
C04	Auto - Repair Shops	M	BMP38	Vehicle Owner Education
C04	Auto - Repair Shops	M	BMP39	Proper Grease and Oil Disposal
C04	Auto - Repair Shops	M	BMP40	Dumpster Maintenance
C04	Auto - Repair Shops	M	BMP49	Secondary Containment
C04	Auto - Repair Shops	M	BMP51	Materials Safety Data Sheets (MSDS) On-Hand
C04	Auto - Repair Shops	M	BMP13	Emergency Spillway
C04	Auto - Repair Shops	M	BMP20	Bio-Retention Practices
C04	Auto - Repair Shops	M	BMP22	Hydrodynamic Separators
C04	Auto - Repair Shops	M	BMP23	Catch Basin Media Inserts

Table 8. BMPs Associated with PCS Code C07

PCS Code	Activity at Site	SW Risk	BMP Code	BMP Name
C07	Chemical/Petroleum Processing/Storage	H	BMP12	Stockpile and Materials Management
C07	Chemical/Petroleum Processing/Storage	H	BMP13	Emergency Spillway
C07	Chemical/Petroleum Processing/Storage	H	BMP22	Hydrodynamic Separators
C07	Chemical/Petroleum Processing/Storage	H	BMP23	Catch Basin Media Inserts
C07	Chemical/Petroleum Processing/Storage	H	BMP30	Spill and Leak Prevention
C07	Chemical/Petroleum Processing/Storage	H	BMP31	Spill Clean-Up
C07	Chemical/Petroleum Processing/Storage	H	BMP32	Proper Fluids Handling
C07	Chemical/Petroleum Processing/Storage	H	BMP34	Equipment Maintenance
C07	Chemical/Petroleum Processing/Storage	H	BMP36	Housekeeping
C07	Chemical/Petroleum Processing/Storage	H	BMP37	Proper Wash Water Disposal
C07	Chemical/Petroleum Processing/Storage	H	BMP40	Dumpster Maintenance
C07	Chemical/Petroleum Processing/Storage	H	BMP41	Minimize Chlorinated Cleaners and Solvents
C07	Chemical/Petroleum Processing/Storage	H	BMP49	Secondary Containment
C07	Chemical/Petroleum Processing/Storage	H	BMP50	Proper Hazardous Waste Disposal
C07	Chemical/Petroleum Processing/Storage	H	BMP51	Materials Safety Data Sheets (MSDS) On-Hand

These BMPs were assigned based on observations of an overabundance of materials on-site (specifically tires), oil sheens from leaking vehicles and/or storage containers, and an overfilled dumpster with trash overflowing onto the site. In addition to Brakes Plus, the

remainder of the 21 high priority PCS sites were also assigned site-specific BMPs, and these BMP recommendations were forwarded to the City of Grants Pass' Public Works Department.

Figures 9a. and 9b. Brakes Plus

3.4 Communication of Results to the City of Grants Pass

Results of the project were shared with the City of Grants Pass. The risk matrix, the inspection worksheet, the results of the surveys, methodology for the surveys, and two maps showing both the elements of the risk matrix and the high priority PCS in Grants Pass were shared. These results were presented at an RDWP meeting. Lastly, the BMP Database and “how-to” guide were shared with the City of Grants Pass. Overall, as a result of these deliverables, the impacts of chemicals and other pollutants on drinking water quality can be addressed and limited, resulting in the initial SWP efforts that the City of Grants Pass had hoped to achieve.

4.0 DISCUSSION

In an ideal situation, all 22 of the high priority PCS sites would be addressed by follow-up surveys and, potentially, discussions between business and property owners and the City of Grants Pass. However, considering the amount of time required and the expense of visiting these 22 PCS sites, in addition to daily departmental tasks, it is likely that Public Works employees reviewed the windshield survey database (**Appendix I.**) and narrowed down the list of sites to include only those that they felt most concerned with and needed to follow up on. Further, Public Works is also well-aware of many of these PCS sites, some of which have a history of causing concern related to source water. Having these 22 PCS sites flagged is the first step in long-term monitoring to ensure that source water for residents within Grants Pass can be protected.

As expected, these 22 high priority sites house chemicals on-site, both known and unknown, provide storage of items with the potential of leakage, such as USTs, and can contribute large quantities of stormwater runoff during high rain events. Understanding where these PCS are located in relation to the drinking water intake, surveying the sites, and determining site-specific BMPs to protect the drinking water were all tasks accomplished within Grants Pass. As with EWEB's environmental risk assessment of the McKenzie Watershed and actions to take to protect that drinking water source, the City of Grants Pass now has a solid foundation for protecting the drinking water source for its residents. The momentum initiated by EWEB and continued by the City of Grants Pass has resulted in further work within the Rogue Basin.

While this process for identifying and responding to high priority PCS is replicable, there are limitations that may exclude DWPs, municipalities, and conservation organizations from using it. For example, in order to apply the risk matrix to GIS, the user will need to have access

to and knowledge of ArcMap or a similar GIS program. Unfortunately, licenses for ArcGIS begin at \$800/year for the Desktop Basic program, and although many organizations can afford that expense, some smaller, private DWPs may not be able to justify the cost. Not only can the cost be a barrier, but the DWP will also need to know how to use the many tools within GIS programming. With online resources, training, courses, and peer-to-peer instruction, these programs can be learned. However, in order to have an in-depth understanding of the programs, much time will need to be allocated to this learning.

In addition to time allocated for learning GIS programs, depending on the size of the DWPA, a large amount of time may be required to complete the windshield surveys. This time includes compiling the list of PCS sites, placing them in geographical order, visiting each PCS and completing an inspection worksheet, and recording the survey data into the windshield survey database. For DWPs with a small staff, this amount of time may impact their routine tasks that need to be accomplished, and these DWPs may instead choose to contract out this type of work.

Lastly, although the current BMP Database includes over 50 recommended BMPs categorized as erosion prevention, pollution prevention, runoff controls, and/or sediment controls, there are likely many more BMPs that have not yet been identified and listed within the database. In the following section, resolutions to these limitations that were implemented within the Rogue Basin will be discussed, as well as other future plans.

While not all of the above limitations can be easily resolved, the incompleteness of the current BMP Database can be addressed through an adaptation into an open-source document. By simply moving away from a traditional Excel spreadsheet to a format as simple as a Google Sheets document shared between DWPs, municipalities, and conservation organizations, the

BMP Database can be added to, edited, and shared with others as a living document, or one that is constantly being updated and improved upon.

Upon finding the December 2018 pilot project within the City of Grants Pass to be successful, the RDWP felt that applying this process within other Rogue Basin communities would be significantly helpful in identifying high priority PCS. Beginning in the summer of 2019, the following communities were surveyed:

- Shady Cove, Anglers Cove/Hiland Water Company/Shady Cove Heights Water Company - July 26th, 2019,
- City of Rogue River - August 1st, 2019,
- City of Gold Hill - August 7th, 2019,
- Trail, Country View Mobile Home Estates - August 15th, 2019,
- City of Cave Junction - August 21st, 2019,
- Eagle Point, MWC - January 14th and 15th, 2020, and
- White City, MWC - late February to late March, 2020.

Further, to simplify the survey process, the hard-copy inspection worksheet was scrapped and instead modified for the ArcGIS Survey 1-2-3 application. Rather than completing these surveys with paper and pencil, the Survey 1-2-3 application allowed for real-time data to be entered into an online form using a smartphone. Once the data is uploaded, it is compiled into an online database that shows the results for each question or prompt from all of the surveys. Utilizing this tool eliminated the need to scan physical paper copy inspection worksheets and record the data into the inspection worksheet database, which saves a great amount of time. Additionally, each survey entry is georeferenced and shows up as a point in an ArcGIS data layer. Overall, moving from paper copies to the Survey 1-2-3 application proved to save time and add a new technological element to the project.

Not only have many high priority PCS been identified within many of the Rogue Basin communities using a more technologically-advanced process, but other opportunities have surfaced from this initial work. Currently, reporting for a National Water Quality Initiative

(NWQI) program funded by the Natural Resources Conservation Service (NRCS) targeting Upper and Middle Rogue subwatersheds is underway. This NWQI reporting will provide the NRCS and other conservation organizations a basis for approaching private, agricultural landowners with solutions and, potentially, funding for implementing BMPs to protect water quality.

Other projects that are underway include a spill response planning effort, a multi-jurisdictional post-fire monitoring project, and one that has grown from the initial PCS survey work completed within Eagle Point and White City, a Source Water Patrol project by RVCOG and funded by the MWC. Full details for this project are still being determined, but the overall goals are to conduct visual surveys of high priority PCS within the White City industrial area. Upon finding seemingly undesirable water quality conditions adjacent to these PCS, MWC has requested the use of Survey 1-2-3 to record and data, and if deemed necessary, collect water samples for chemical analyses.

In the following section, drinking water quality studies as a surrogate for stormwater quality and other environmental studies, as well as recommendations for continued work within the Rogue Basin, will be discussed.

5.0 CONCLUSIONS AND RECOMMENDATIONS

As the drinking water source for residents of Grants Pass and other communities downstream, the Rogue River requires heightened attention in regard to PCS. Through the guidance of the RDWP, the risk matrix, windshield survey, and BMP recommendation process will likely continue to evolve and be applied within additional communities, perhaps even outside of the Rogue Basin, to protect drinking water.

However, to make the best use of these processes, I will share a few recommendations:

- Keep the risk matrix as concise as possible and do not include risk components that will add too much complexity during the transition to ArcGIS. For example, most of the risk matrices following the pilot project only included these risk components: surface water risk, proximity to waterway, flood hazard, and jurisdiction. The only risk matrix that included additional factors was the one created for White City, and these additions were specifically requested by the MWC,
- If the DWPs, municipalities, and conservation organizations are able to obtain an Environmental Systems Research Institute (ESRI) license, utilizing ArcGIS Online and Survey 1-2-3 will speed up the windshield survey process,
- Examine the BMP Database and add information that is currently missing, and
- Document the process, record changes, and share outcomes with others.

Grants Pass, OR 97526

Re: Updated Source Water Assessment for PWS # 4100342

Dear Mr. Canady and Mr. Kuhnert,

On behalf of the Oregon Health Authority (OHA), the Oregon Department of Environmental Quality (DEQ) is pleased to provide your community with important information in this Updated Source Water Assessment. The updated assessment is intended to provide information and resources to assist you and your community to **implement local drinking water protection efforts**. Since the first source water assessments were completed in 2005, state agencies have significantly expanded analytical capabilities, including more detailed data for analyzing natural characteristics and potential pollutant sources. DEQ is currently completing the updated assessments for surface water systems and OHA is updating the groundwater system assessments.

As you know, assuring safe drinking water depends on public water suppliers implementing multiple successful practices. **First, protect the drinking water source.** Second, practice effective water treatment. Third, conduct regular monitoring for contaminants to assure safety. Fourth, protect the distribution system piping and finished water storage from recontamination. Finally, practice competent water system operation, maintenance, and construction. These practices are collectively called “multiple barrier public health protection”. **Source water protection is an important first step because starting with the best possible quality source water helps assure that water treatment can be effective at all times.**

Source water protection is accomplished by effective state public health programs, environmental protection, land use policies, pro-active land stewardship, and by implementation of local drinking water protection efforts. The susceptibility of the public drinking water system source depends on both the natural conditions in the watershed as well as the anthropogenic activities in the watershed.

This letter, with attached figures and technical information, constitutes your **Updated Source Water Assessment**. It supplements your original Source Water Assessment (link here: <http://www.deq.state.or.us/wq/dwp/swrpts.asp>). One of the most important assets a public water system can have is accurate source water area mapping and visual resources to share with the community citizens and officials. The figures include a new regional map view of your watershed, topographic or aerial photograph basemap with the source area delineated, and maps with natural characteristics, anthropogenic land uses, potential sources of pollutants, 8-hour time-of-travel zone for the surface water intake, and historic landslides. Information on anthropogenic land uses in a drinking

water source area is important for evaluating potential pollutant sources and working with stakeholders upstream. Tables are provided that include a summary of the types of potential pollutant sources present in your drinking water source area.

There are also a variety of resources included in this document to assist you with drinking water source protection efforts. **Appendix #1** provides a summary of how to use the information provided in the assessment to move forward to develop and implement source water protection. **Appendix #3** lists websites and resources available to public water systems and community members seeking technical assistance for work on watershed protection. **Appendix #4** provides brief descriptions and contact information for grants and loans to fund both drinking water infrastructure and source protection projects. **Appendix #5** contains details on potential sources of pollution identified in readily accessible state and federal databases and GIS layers.

For watersheds with more than one intake such as the Rogue Subbasin, all protection areas for intakes upstream of the water system's intake are included in their drinking water source area. Activities and impacts in upstream drinking water protection area also have the potential to impact downstream water users. We encourage public water suppliers to work with other water providers within the vicinity or subbasin as they develop protection strategies. State agency resources are also available to help you with mapping and information needs. Larger sizes of the source area maps and more details of landslide potential and other natural characteristics are available for you upon request (contact Julie Harvey at 503-229-5664). A Surface Water Resource Guide with more extensive information to assist public water systems in protecting their source waters is available at <http://www.oregon.gov/deq/wq/programs/Pages/dwp.aspx>. Please check it out and let us know if you would like assistance with implementation.

For direct assistance and/or additional information regarding watershed protection, call Sheree Stewart at DEQ (503-229-5413). For more information on drinking water policies and procedures, call Casey Lyon at OHA (541-726-2587).

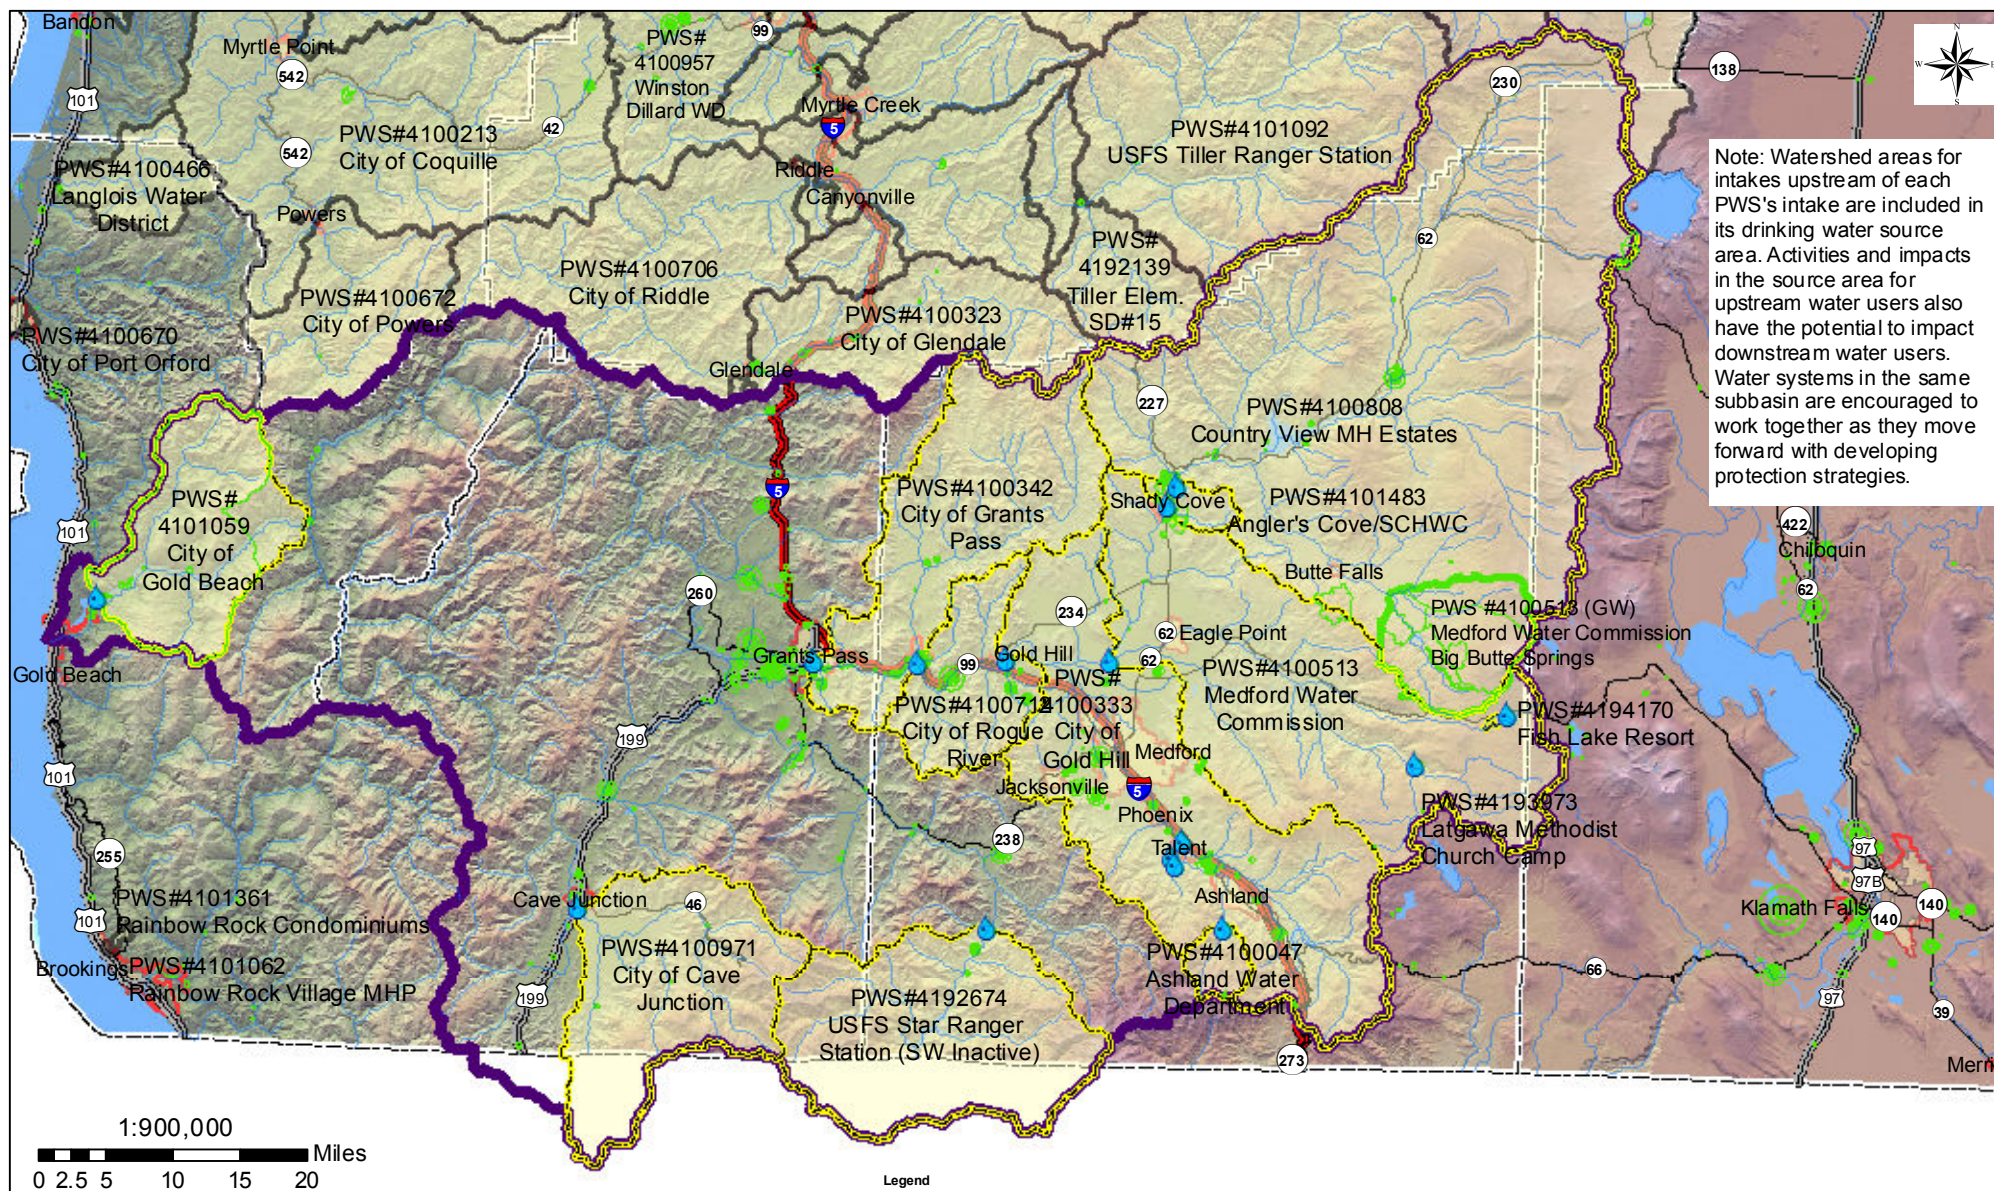

Sincerely,

A handwritten signature in black ink, appearing to read 'Sheree Stewart', with a stylized, flowing script.

Sheree Stewart, Drinking Water Protection Coordinator
Environmental Solutions Division

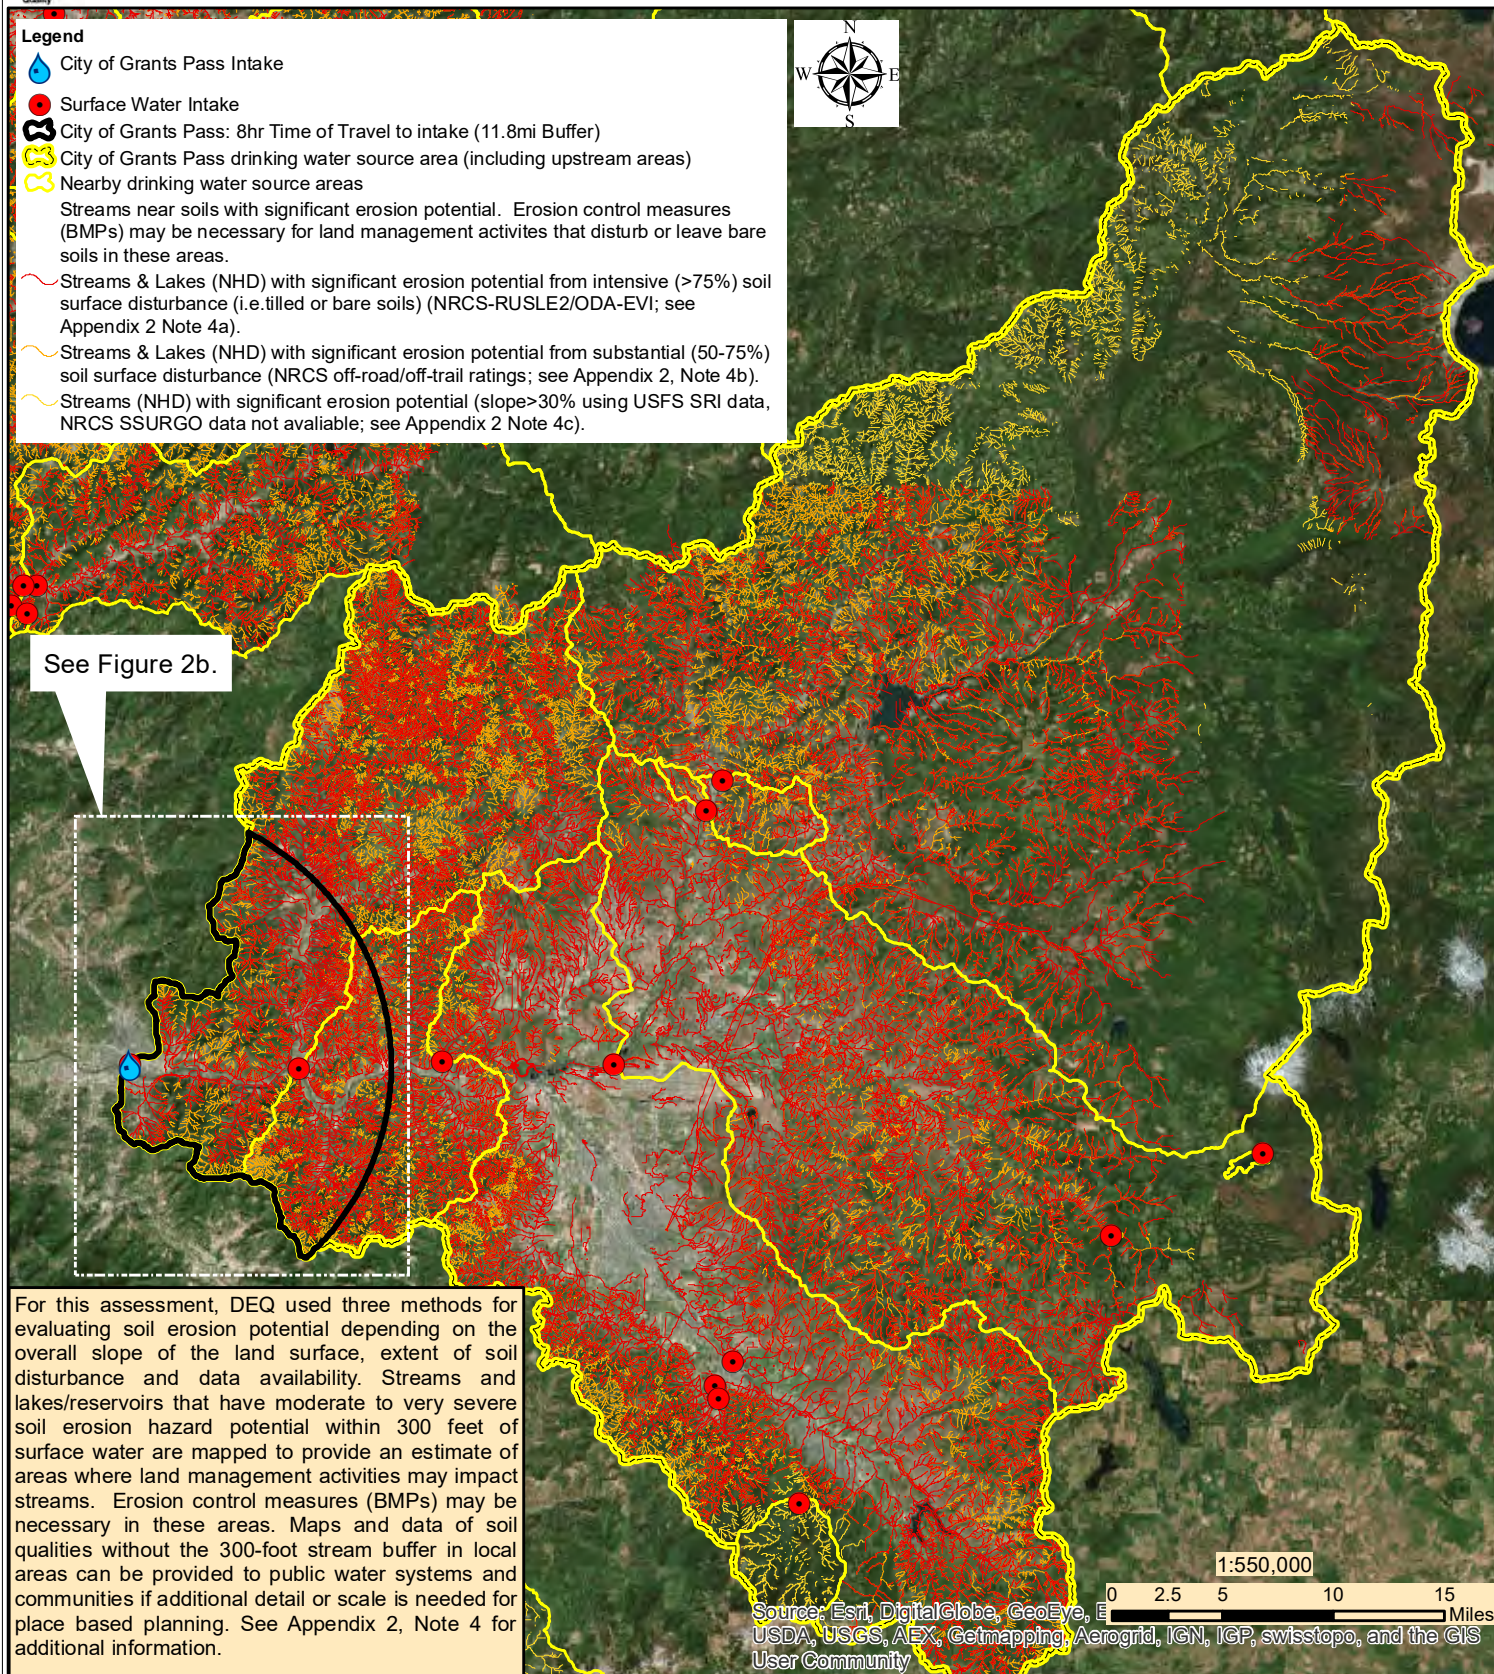

Cc: Casey Lyon, Technical Services Manager, Oregon Health Authority

Figure 3a. City of Grants Pass (PWS #00342)

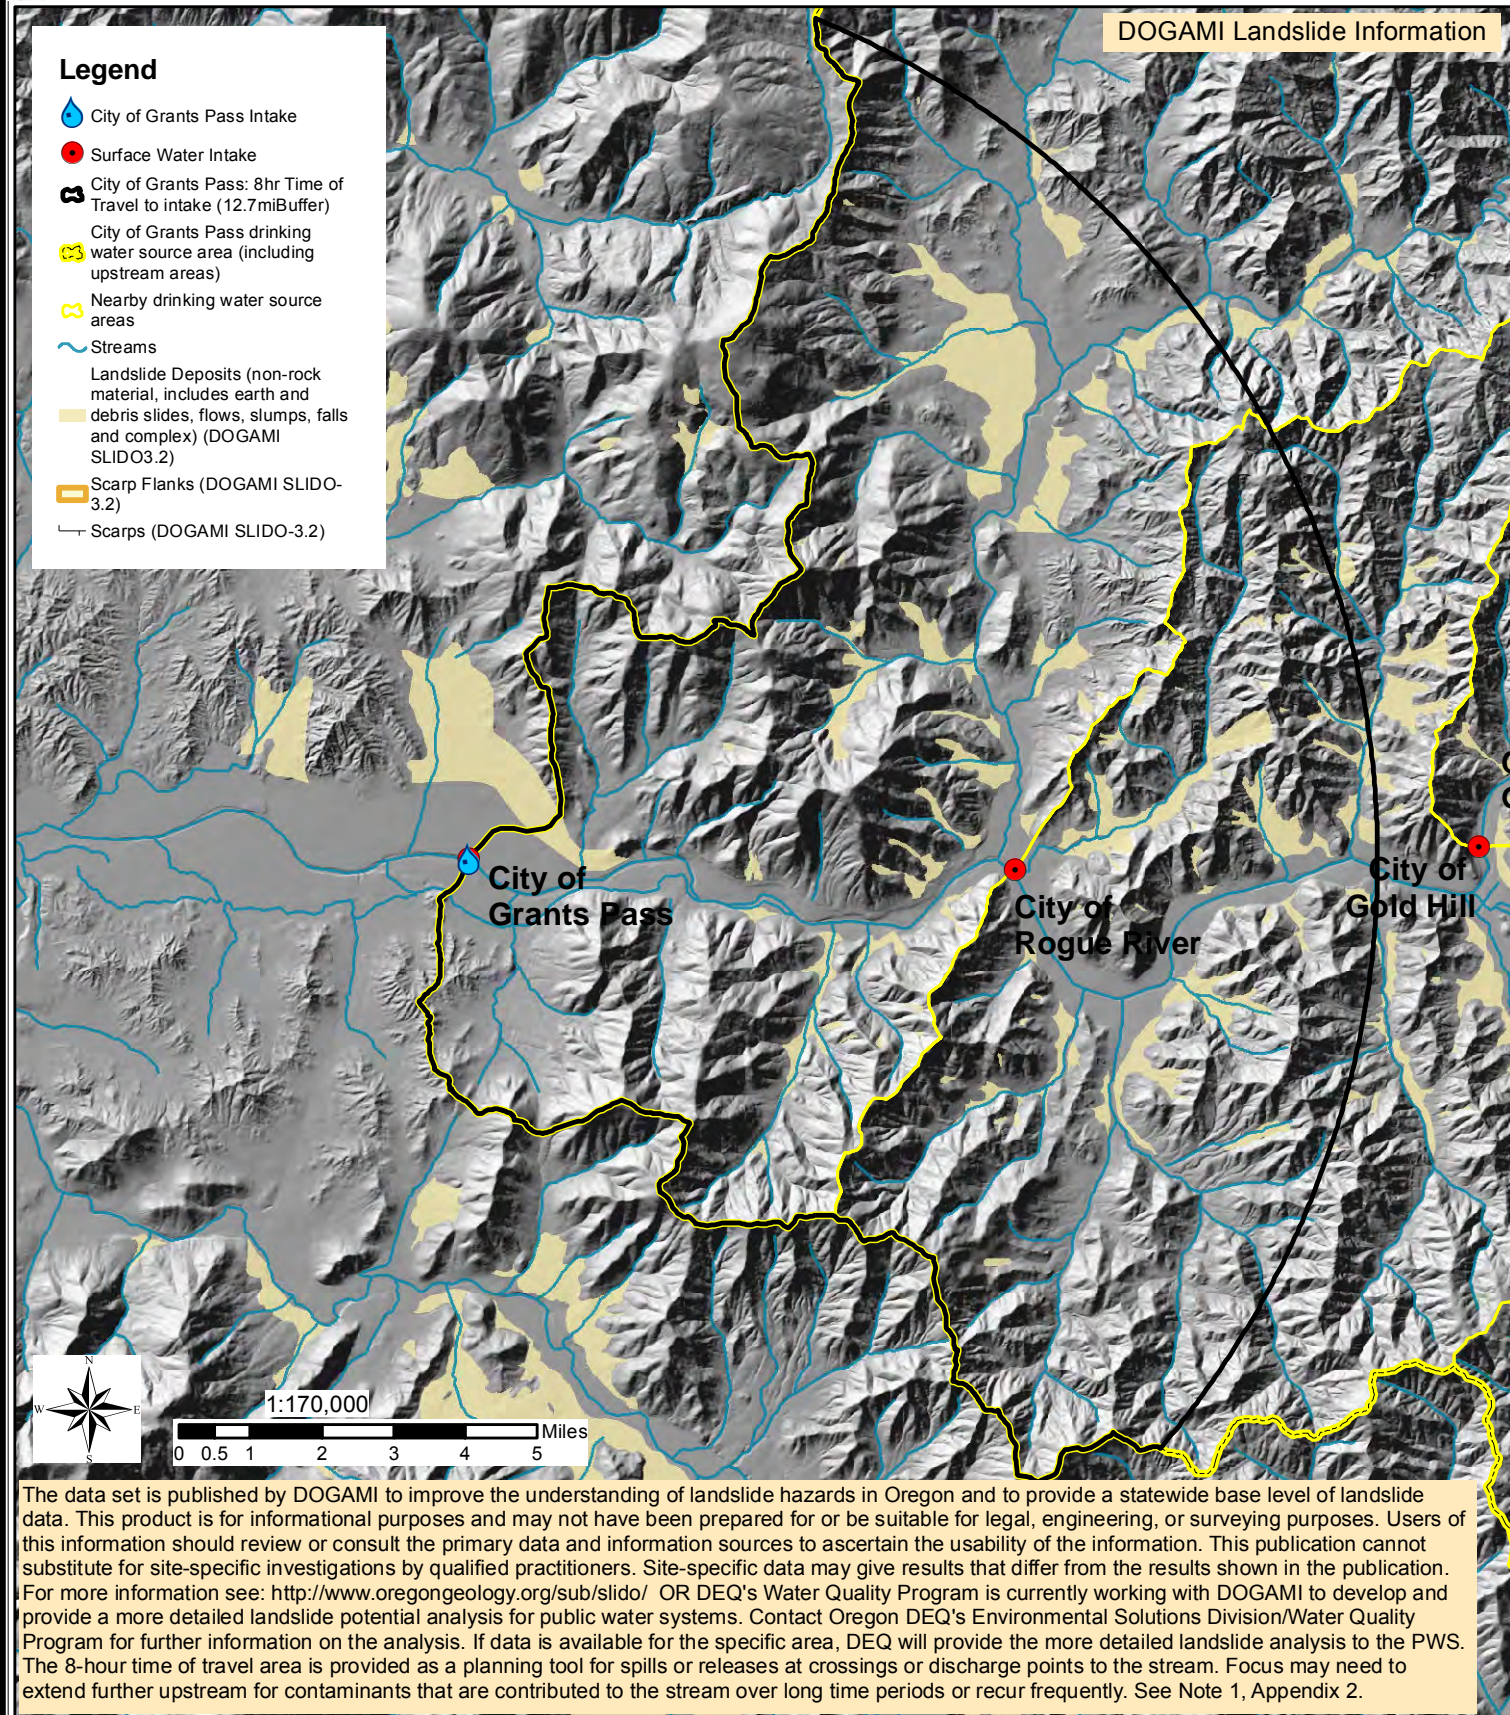

Drinking Water Source Area Landslide Hazards Map

 (See Appendix 2 for Key to map details and metadata)

The data set is published by DOGAMI to improve the understanding of landslide hazards in Oregon and to provide a statewide base level of landslide data. This product is for informational purposes and may not have been prepared for or be suitable for legal, engineering, or surveying purposes. Users of this information should review or consult the primary data and information sources to ascertain the usability of the information. This publication cannot substitute for site-specific investigations by qualified practitioners. Site-specific data may give results that differ from the results shown in the publication. For more information see: <http://www.oregongeology.org/sub/slido/> OR DEQ's Water Quality Program is currently working with DOGAMI to develop and provide a more detailed landslide potential analysis for public water systems. Contact Oregon DEQ's Environmental Solutions Division/Water Quality Program for further information on the analysis. If data is available for the specific area, DEQ will provide the more detailed landslide analysis to the PWS.

	USFS			709.24	29%	
	Other Federal Lands			111.25	5%	
	Tribal					
Other						
Potential Pollutants (see Table 2 for potential pollutants based on regulatory database search and Figures for approximate locations)						Notes Erosion control measures ("best management practices") may be necessary for land management activities that disturb or leave bare soils in these areas. Maps and data of soil qualities without the 300-foot stream buffer in local areas can be provided to public water systems and communities if additional detail or scale is needed for place-based planning. See Note 4 in Appendix 2. More details on shallow landslide susceptibility may be available. Contact DEQ Drinking Water Protection for additional information. Includes earth and debris slides, flows, slumps, falls and complex landslide types. Does not include rock material landslide deposits.
	Stream Miles in Erodible Soils ⁽⁴⁾	1,102		11,229		
	High Soil Erosion Potential Percent ⁽⁴⁾ (% stream mi w/ high erosion located w/in 300' of the stream)	98%		85%		
	Shallow Landslide Potential	see note		see note		
	Landslide Deposits ⁽⁵⁾ (DOGAMI - SLIDO 3.2)	areas throughout watershed - see note		areas throughout watershed - see note		

Water Quality Monitoring Data and Treatment Method	Source Name	Rogue River (surface water)
	Treatment Process	Rapid sand
	<u>Safe Drinking Water Information System Results</u> ⁽⁶⁾	<u>MCL Violations and Significant Detections</u> <u>(2005-2017)</u> ⁽⁶⁾
	Regulated volatile organic chemicals, synthetic organic chemicals and inorganic compounds	none
	Disinfection byproducts (Total Trihalomethanes (TTHM), Haloacetic acids (five) (HAA5), bromate, and chlorite)	Alerts for Bromodichloromethans (1) Chloroform (1), TTHM (15) and HAA5 (11). No Violations
	Bacteria (Ecoli and TCR=Total Coliform Rule)	Alerts for Total Coliform (4). No Violations
DEQ/OHA Source Water Monitoring project test data ⁽⁷⁾ ND = All parameters not detected NA = source water not analyzed		<p>The following pesticides and typical wastewater constituents were detected at low levels in drinking water source monitoring in the Rogue River at the Grants Pass intake location: DEET, Diuron, Sulfamethoxazole, Cholesterol, Coprostanol, beta-Sitosterol, Stigmastanol, Bis(2-ethylhexyl)phthalate (2010). These constituents were detected at low concentrations that are well below EPA maximum contaminant levels (MCLs) for drinking water or health based screening levels (where established). The presence indicates a source and a pathway and results can be used by public water systems to prioritize protection activities.</p> <p>Note that DEET, Atrazine, Diuron, Carbaryl, Fluometron, Sulfamethoxazole, Butylbenzylphthalate, Carbamazepine, Diphenhydramine, Cholesterol, Coprostanol, Bis(2-ethylhexyl)phthalate and Aluminum (>SMCL) (2008) were also detected at low levels in samples from the Rogue River at the City of Gold Hill drinking water source intake (upstream of Grants Pass).</p>
Additional raw water quality monitoring data for the drinking water source may be available from other sources including USGS, DEQ's LASAR database, individual water providers, local partners (i.e. soil and water conservation districts or watershed councils) or local volunteer monitoring.		

Table 2: Summary of Potential Sources of Pollution identified in the 8-hour time-of-travel as identified in readily accessible state and federal databases and GIS layers Updated Source Water Assessment

see Appendix 2 for Key to Tables for Notes and Descriptions of Acronyms

See Appendix 5 for detailed list of potential sources

PWS Name: City of Grants Pass

PWS Number: 00342

- This summary only includes potential sources of pollution within the estimated 8-hour time of travel area which is provided as a planning tool since eight hours should provide adequate response time to protect the integrity of the public water system intake after a spill or release at any crossing or discharge point to the stream. It is recommended the water system and community considers increased protection within this 8-hour travel time from the intake for spills and other acute risks. Focus may need to extend further upstream for contaminants that are contributed to the stream over long time periods or recur frequently.
- This information supplements the Original Source Water Assessment Inventory dated between 2000 and 2005 and should be used in conjunction with the original inventory to provide a more detailed analysis of potential sources of pollution.
- Note that due to state database limitations, some sites will require further research to verify presence and location.

Developing Strategies For Drinking Water Protection

Many¹ public water systems in Oregon will receive an Updated Source Water Assessment (USWA) developed by the Oregon Department of Environmental Quality (DEQ) and the Oregon Health Authority (OHA) drinking water protection team by 2017. USWAs provide the water systems and communities more detailed information on the watershed or recharge area that supplies their well, spring or intake (the “drinking water source area”). Public water systems and local communities can use the information in the assessments to voluntarily develop and implement drinking water protection strategies.

Requirements for water quality monitoring of public water systems in Oregon provide some degree of assurance of safe drinking water; however, all systems are vulnerable to potential contamination. **One of the best ways to ensure safe drinking water and minimize future treatment costs is to develop local strategies designed to protect against potential contamination.** Not only will this add a margin of safety; it will also raise local community awareness of drinking water contamination risks and provide information about how communities and local landowners can help protect their drinking water sources.

Using Place-Based Planning to Develop Protection Strategies

The drinking water source area for most communities lies partially, if not entirely, outside of their jurisdiction and may include several different governing agencies as well as a diverse mix of landowners, businesses and residents. When developing protection

strategies, DEQ and OHA highly recommend that the water system and community involve potentially affected stakeholders early in the process to foster stakeholder awareness and trust in the resulting strategies.

Oregon adopted an “Integrated Water Resources Strategy (IWRs)” in 2012 that provides recommendations for how to do a place-based and integrated approach to water resources planning. This approach helps communities achieve the level of coordination and collaboration to successfully address local water quality and water quantity challenges, such as developing and implementing strategies to protect their drinking water sources. The IWRs Place-Based Planning guidelines describe elements to consider for building a collaborative process, characterizing water-related issues, quantifying existing and future water needs, developing a suite of solutions, and adopting and implementing the plan. More information about the process can be found in this Water Resources Department document: http://www.oregon.gov/owrd/LAW/docs/IWRS/2015_February_Draft_Place_Based_Guidelines.pdf

Strategies to Achieve Risk Reduction

The primary goal of the drinking water protection strategies should be to reduce or minimize the risks of pollution in the source water. It is highly improbable that one can *eliminate* risks in any area, but by applying one or more protection strategies, a community will be able to reduce the likelihood of pollutants affecting the water supply in the future. Potential strategies include both general management practices such as conservation or efficiency measures that will apply to the entire drinking water protection area and management practices that can be applied most appropriately by land-use category (commercial/industrial, agricultural/rural, forestry,

¹ All community water systems using surface water will receive a USWA. Because of the number of water systems using groundwater in Oregon, the Oregon Health Authority has prioritized completing assessments for new Community and Non-Transient Non-Community water systems and systems that have added a new water source since their original source water assessment was completed.

residential/municipal, and miscellaneous). common management options as an example
 The following list provides some of the most to public water suppliers and communities:

Example Strategies for Drinking Water Protection	
Non-Regulatory Options	
Notify and Educate the Public:	Contact property owners within the protection area so they are aware of the need for protection measures. Let them know this is voluntary. Focus educational efforts on basic information about the source water and the relationship between surface activities and the water quality; familiarity with the location of the protected area; basic information on sources of contamination; and effective strategies for safe management of all potential contaminants. Public education/notification can be accomplished using local news outlets, letters to residents, letters to land owners/operators, and bill stuffers/customer mailings. Information signs could be placed adjacent to roadways entering the protection area. Include on the sign the name of the water system/jurisdiction and a phone number where callers can obtain more information or report releases.
Use Technical Assistance Resources:	Work with local or state providers of technical assistance (e.g., DEQ's regional offices, Soil and Water Conservation Districts, OSU Extension) to encourage the use of best management practices for pollution prevention and waste reduction. Apply for grants or funding to provide financial incentives such as pollution prevention tax credits, low-interest loans or direct subsidies/cost sharing. Provide recognition for environmental friendly businesses and operations (e.g., green awards, plaques/door signs).
Sponsor Hazardous Waste/Unused Chemical Collection:	Establishing a permanent location or holding one-day events to collect hazardous wastes from community residents (including households and small businesses) is an effective way to reduce risks posed by storing hazardous wastes or other chemicals within the protection area. Hold an amnesty (free-disposal) event for unused business or agricultural chemicals stored in the protection area. Set up a local materials exchange program (or publicize existing programs).
Develop Spill Response Plans:	Encourage and assist your local fire department and transportation department with spill response planning. Jurisdictions within protection areas could develop specific spill response procedures to allow quicker response and notifications should a hazardous material spill or release occur. These can be integrated into your county's Emergency Management Plan. Contact the Oregon Department of Transportation (ODOT) for state highways.
Acquire Land or Rights to Development:	Community ownership of as much as possible of the critical land areas within the protection area and managed for water quality protection provides some of the best assurance of long-term protection of the public water supply. Protection could be provided by ownership accomplished through methods such as capital or bond fund programs, or through easements and deed restrictions. Private non-profit land conservation organizations or local land trusts in your area can assist you in acquiring land within your protection area by conveyance to a trust, seeking donations, or direct land purchases for conservation.
Local Regulatory Options	
Existing Regulations and Permits:	Take advantage of opportunities to provide public comment and input when existing regulatory programs are reviewing permits or programs which affect the siting, design, construction, operation or closure of facilities within your protection area. Ensure you are included on regulatory agency contact lists so that you receive announcements for public involvement opportunities. Consider participating in advisory group meetings for specific topics of interest. Ensure that the regulatory programs are aware of your protection area and request that compliance inspections or technical assistance is prioritized in critical areas.
Land Use Controls (Zoning/Health Ordinances):	There are many different types of zoning tools. Your community can identify the protection area with an overlay map and enact specific requirements for land uses and development within these boundaries in order to protect public health. Ordinances applying to sites that pose a risk to water quality within the overlay area may include prohibition of various land uses (such as landfills or underground fuel storage tanks); subdivision controls (such as limiting density or requiring larger lot sizes); special permitting or siting requirements (i.e. placing limitations on the use of toxic and hazardous materials, pesticides, salts); and performance standards (i.e. requiring secondary containment for petroleum or chemical storage over a certain volume).

How do communities use the Updated Source Water Assessments?

The Updated Source Water Assessment (USWA) provides the information for developing local protection strategies. The USWAs include details characterizing the source area and potential source water risks. It also provides key information that will allow the community to focus limited resources on higher-risk areas within the watershed or recharge zones for wells. The USWA information should be supplemented with local knowledge of the water system and community. The water system and community can refine the delineation of sensitive areas and identification of potential contamination sources through further research, local input and coordination with state agencies.

The USWA source area characterization should be reviewed to clarify the presence, location, operational practices, and actual risks of the identified facilities and land-use activities. Additional potential contaminant sources or sensitive areas may also be added based on local knowledge or additional research. Potential sources with low or no risk (such as landowners who have already incorporated best management practices into their operations to protect your source of drinking water) can be screened out or selected for low priority outreach or technical assistance. Local and state resources can then be directed to the highest priority potential problems in the drinking water source area.

Another way to use the information in the USWA is in developing the water system's contingency plan. Contingency planning focuses on potential threats to the drinking water supply (such as mechanical problems, chemical detections in the source water, chemical spills in the source area, or natural disasters) and the development of procedures to be followed should these events occur. Guidance for preparing a contingency plan and examples are available from OHA. Many contingency plan elements may have already been completed by public water systems as

part of their required Emergency Response Plan. Additional elements can be added as drinking water source protection strategies are developed.

Public water systems may also find it necessary, as a result of either existing or projected increased demand, to explore the development of additional sources for drinking water. Drinking water source protection provides a mechanism that can be used to help select the best site and identify areas that should be protected now so they will provide quality drinking water in the future. Additionally, development of a new groundwater source in the vicinity of existing sources may modify the movement of groundwater in the subsurface, perhaps changing the shape and orientation of existing drinking water source areas. Evaluation of the significance of those changes should be addressed in the protection planning process to ensure that the management strategy in place will continue to protect the community's drinking water supply.

Need assistance?

Drinking water source protection is already at work in Oregon. A number of Oregon communities are currently developing and implementing strategies to protect their drinking water source areas. Successful drinking water protection plans developed in Oregon are available to communities as templates or examples. Staff members at OHA and DEQ are available to provide assistance, and extensive written materials are available to local community groups or consultants to assist in developing drinking water protection plans or strategies.

Detailed information about developing drinking water source protection strategies can be found on DEQ's Drinking Water Protection Program website. The website also includes Updated Source Water Assessment methods and results, sample Drinking Water Protection Plans, information for

schools, and links to many other useful sites: <http://www.oregon.gov/deq/wq/programs/Pages/DWP.aspx>

The OHA – Drinking Water Program website includes system characteristics, monitoring data, contacts for all public water systems in Oregon, drinking water standards, fact sheets on contaminants, information on the Safe Drinking Water Revolving Loan Fund, Consumer Confidence Reports, and more:

<http://www.healthoregon.org/dwp>

Water systems or community members interested in the potential of developing drinking water protection strategies should contact the respective DEQ and OHA coordinators. Those systems using surface water sources should initially contact Sheree Stewart, Drinking Water

Protection Program Coordinator, DEQ, Portland, (503) 229-5413. Groundwater-based water systems should initially contact Tom Pattee, Groundwater Coordinator, OHA, Springfield, (541) 726-2587 x24. As the state moves further into the protection phase of the Oregon program, DEQ and OHA will be able to direct individual requests for assistance to specific staff trained and experienced in that area, both within the state agencies and in other partner organizations.

Alternative formats

Documents can be provided upon request in an alternate format for individuals with disabilities or in a language other than English for people with limited English skills. To request a document in another format or language, call DEQ in Portland at 503-229-5696, or toll-free in Oregon at 1-800-452-4011, ext. 5696; or email deqinfo@deq.state.or.us.

Key to Figures and Tables including Notes and Symbols Updated Source Water Assessments

General Legend:

-  Public water system surface water
-  Public water system drinking water source
-  Nearby public water system surface water
-  Nearby public surface water system drinking water source area
-  Stream (NHD)
-  Interstate
-  U.S. Routes
-  Oregon Routes
-  City limits (ODOT, 2013)
-  Urban Growth Boundary
-  County Boundary

Erosion Potential:

Streams near soils with significant erosion potential. Erosion control measures (BMPs) may be necessary for land management activities that disturb or leave bare soils in these areas.

Streams (NHD) with significant erosion potential from intensive (>75%) soil surface disturbance (i.e. tilled or bare soils) (NRCS-RUSLE2/ODA-EVI; see Note 4a).

Streams (NHD) with significant erosion potential from substantial (50-75%) soil surface disturbance (NRCS off-road/off-trail ratings; see Note 4b).

Streams (NHD) with significant erosion potential (slope>30% using USFS SRI data, NRCS SSURGO data not available; see Note 4c).

Landslide Information

-  Water quality limited stream/lake, DEQ 303(d) list Cat 4A or 5, TMDL approved or needed (DEQ - 2012)
-  Water Quality Concern stream/lake, DEQ 303(d) Cat.3, Insufficient Data (DEQ - 2012)

Key to Figures and Tables including Notes and Symbols Updated Source Water Assessments

Notes

(1) DWSA - drinking water source area - delineated as the 5th-field watershed upstream of the intake. Oregon's surface water source areas are delineated intake to intake. For watersheds with more than one intake, the DWSA is the watershed segment from the PWSs intake to the next intake upstream. All protection areas upstream of a specific water system's intake are included in the drinking water source area for that water system and PWSs are encouraged to work with other water providers and other entities within the Subbasin as they evaluate potential sources and move forward with developing protection strategies.

Time of travel to the intake (8-hour TOT estimate): For surface water systems that encompass an area greater than 100 square miles DEQ has also estimated the area within an 8-hour time of travel from the intake. The 8-hour time of travel distance was estimated using Extended Unit Runoff Method (EROM) for the intake's stream segment in the National Hydrography Dataset (NHDPlus V2). Input data for EROM includes runoff, temperature, precipitation and the model is calibrated using stream gage flow records. For estimating the 8-hour time of travel distance, DEQ used the NHDPlus-V2 mean annual flow estimate (V0001E) attribute which provides a calculated stream velocity in the reach at mean flow. For purposes of this assessment, the 8-hour time of travel is calculated only for the intake's reach segment and is shown as a radial ring originating at the intake which conservative estimate of the upstream 8-hr time of travel distance. The 8-hour time of travel area is provided as a planning tool for the public water system and community since eight hours should provide adequate response time to protect the integrity of the public water system intake after a spill or release at any crossing or discharge point to the stream. Although potential risks to the water supply can exist throughout the watershed, the area within an 8-hour time of travel from the intake is the area where contamination poses the greatest threat to the drinking water supply. It is recommended the water system and community considers increased protection within this 8-hour travel time from the intake for spills and other acute risks. Focus may need to extend further upstream for contaminants that are contributed to the stream over long time periods or recur frequently.

(2) There are independent public water systems that purchase water from the water systems listed and distribute it within their service areas. The total population served listed includes these "wholesale" customers and the total number of PWSs using the source water is also provided.

(3) Land Ownership/Use

The dataset is a combination of multiple datasets and was developed by DEQ in 02/2015 and updated 03/2017. The primary dataset is from Bureau of Land Management BLM (OWNERSHIP_POLY.shp dated 06/20/2013) obtained from BLM at: <http://www.blm.gov/or/gis/data-details.php?id=425>. Publication date: 20130718. The dataset has been modified by grouping land owner categories in order to simplify data display on the map and using geospatial techniques to add additional data to capture the following land uses:

- agricultural land using a combination of the National Agricultural Statistics Service (NASS) data from Natural Resource Conservation Service (2007 "cdl_awifs_r_or_2007.tif") and agricultural land zoning from OR Dept. of Land Conservation and Development (note that public water systems may obtain more detailed information on potential crop types using the US Department of Agriculture National Agricultural Statistics Service "CropScape-cropland data layer." Available at <https://nassgeodata.gmu.edu/CropScape/>),
- private industrial forests using Oregon Dept. of Forestry's (ODF) Private_Industrial_2006_ORLambert.shp" last updated in 2013,
- local government land combined from BLM ownership, tax lot ownership information from local county tax lot data and "OR Map" on-line application: <http://www.ormap.net/>,
- private urban lands based on private lands located within 2016 city limits, and
- all other categories (BLM, USFS, State, etc) from BLM 06202013 data. Note that Private urban lands may include residential, municipal, commercial, and industrial land uses. Private non-urban lands typically include rural residential land but may also include commercial and industrial land uses.

Because of the nature of combining multiple datasets, minor discrepancies will be seen in some maps especially at larger scales. Public water systems and communities could use tax lot data available from the counties or other datasets to further refine the analysis if higher accuracy is needed.

(4) High Soil Erosion Potential

For this updated source water assessment, DEQ used three different soil evaluation methods for estimating soil erosion potential depending on the overall slope of the land surface and data availability. These datasets are as follows:

(4a) For areas with > 75% soil disturbance (such as tilled or bare soils) AND lower slopes (generally $\leq 30\%$, i.e. valleys and agricultural lands): Potential erosion rates are predicted using USDA Natural Resource Conservation Service (NRCS) Revised Universal Soil Loss Equation -2 (RUSLE2), under conditions of exposed soil lacking both plant roots and conservation practices to reduce or control erosion. The Oregon Dept. of Agriculture's Erosion Vulnerability Index (EVI) utilizes the same approach and erosion rate classifications used are from ODA's EVI documentation. The NRCS-RUSLE2/ODA-EVI method utilizes the whole soil erodibility (K_w), rainfall erosivity (R), and length and gradient of slope (LS) factors from NRCS's RUSLE with the soil cover (C) and conservation practice (P) factors set at a value of 1. Setting soil cover and conservation practice factors to "1" illustrates a worst-case scenario where soil is uncovered and exposed directly to precipitation forces and where no conservation practices are in place. Therefore, this index reflects erosion risk from severe agricultural disturbance without mitigating measures in place. It does not evaluate delivery to surface waters. In the Updated Source Water Assessments, DEQ mapped locations where RUSLE2 values are >5 (indicating moderate to very high erosion vulnerability), slopes are low enough for intensive agriculture ($\leq 30\%$), AND within 300 feet of surface water to estimate where delivery to water is possible. Maps and data of soil qualities without the 300-foot stream buffer in local areas can be provided to public water systems and communities if additional detail or scale is needed for place-based planning.

(4b) For management activities such as silviculture, grazing, mining, urban development, fire, firebreaks, etc. with < 75% soil surface disturbance – the risk of soil loss after disturbance activities that expose the soil surface is based on the "off-road/off-trail erosion hazard rating" developed by the USDA NRCS as shown in the Web Soil Survey online viewer (<https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx>). Surface erosion hazard potential for non-Forest Service lands with soil disturbance is determined by combining the effects of slope and the whole soil erodibility factor (" K_w -factor") using 1:24,000 Soil Survey Geographic Database (SSURGO) data. The K_w -factor estimates the susceptibility of soil particles to detachment and movement by water including the effects of rainfall, surface runoff, and infiltration. *Soils with erosion hazard ratings of Moderate, Severe, and Very Severe are more sensitive to extensive ground disturbance such as uncontrolled grazing, forestry, heavy equipment use, fire control, mining, and urban development.* In the Updated Source Water Assessments, DEQ mapped locations where erosion hazard is moderate or higher AND that are within 300 feet of surface water to estimate where delivery to water is possible. Maps and data of soil qualities without the 300-foot stream buffer in local areas can be provided to public water systems and communities if additional detail or scale is needed for place based planning.

According to NRCS, the ratings are:

Slight—Erosion is unlikely under ordinary climatic conditions.

Moderate—Some erosion is likely; control measures may be needed.

Severe—Erosion is very likely; control measures for vegetation re-establishment on bare areas and structural measures are advised.

Very Severe—Significant erosion is expected; loss of soil productivity and off-site damages are likely; control measures are costly and generally impractical.

Note that the off-road/off-trail erosion hazard rating assumes up to 75% of the soil surface is bare. Gully erosion, plowing or other disturbances that "disturb up to nearly 100 percent of the area and change the character of the soil", and Histosol soils containing primarily organic materials are not adequately characterized by this method and effects will be underestimated. Erosion hazard from roads and trails can also be accessed using the USDA NRCS Web Soil Survey online viewer (<https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx>). Areas with $>75\%$ disturbance and lower slopes are addressed using the NRCS-RUSLE2/ODA-EVI method – see info in 4a).

Key to Figures and Tables including Notes and Symbols Updated Source Water Assessments

(4c) Where NRCS SSURGO data is not available (typically National Forest lands), Soil Resource Inventory (SRI) information from the US Forest Service was used to determine erosion potential. Erosion potential for soils represented in the SRI data is based on available representative data attributes such as sedimentation yield potential, sediment, or surface soil erosion potential. Specific information on the factors used for each National Forest to evaluate sensitivity is available from DEQ upon request. In the Updated Source Water Assessments, DEQ mapped locations where soils with erosion risk is within 300 feet of surface water to estimate where delivery to water is possible.

(5) Landslide Information

OR Department of Geology and Mineral Industries (DOGAMI) Statewide Landslide Information Database of Oregon Release 3.2 (SLIDO-3.2). Includes earth and debris slides, flows, slumps, falls and complex landslide types. Does not include rock material landslide deposits. The landslide data set is published to improve the understanding of landslide hazards in Oregon and to provide a statewide base level of landslide data. This product is for informational purposes and may not have been prepared for or be suitable for legal, engineering, or surveying purposes. Users of this information should review or consult the primary data and information sources to ascertain the usability of the information. This publication cannot substitute for site-specific investigations by qualified practitioners. Site-specific data may give results that differ from the results shown in the publication. For more information see: <http://www.oregongeology.org/sub/slido/>
OR DEQ's Water Quality Program is currently working with DOGAMI to develop and provide a more detailed landslide potential analysis for public water systems. Contact Oregon DEQ's Water Quality Program for further information on the analysis. If data is available for the specific area, DEQ will provide the more detailed landslide analysis to the public water system.

(6) Safe Drinking Water Information System (SDWIS) data is obtained from Oregon Health Authority's Data Online available at <https://yourwater.oregon.gov/>.

- "Significant detections" indicate water quality tests with analytical results greater than the detection limit (for volatile and synthetic organic compounds (VOCs and SOCs)) or one-half of the maximum allowable contaminant level (for inorganic compounds (IOCs), arsenic and nitrate). Significant detections are not water quality violations but may require follow-up actions by the OHA Drinking Water Program. Significant detections are available as "alerts" in OHAs Data Online.
- Maximum Contaminant Level (MCL) Violations indicate samples that exceed the MCL and may be based on an average of samples or violation of a treatment technique (i.e. lead and copper rule). Maximum Contaminant levels and action levels for chemicals are available OAR 333-061-0030. Does not include violations for late/non-reporting or treatment/distribution system deficiencies.
- A full list of tested and regulated volatile organic chemicals, synthetic organic chemicals and inorganic compounds and disinfection byproducts is provided in OAR 333-061-0030 and OAR 333-061-0036. Only regulated chemicals are reported in SDWIS. It is important to note that public water system compliance data is collected after drinking water treatment, typically at the entry point to the distribution system.

(7) DEQ/OHA source water monitoring project samples were collected between 2008 and 2012 and analyzed for several hundred compounds, including Oregon-specific herbicides, insecticides, pharmaceuticals, volatile organic compounds (including cleaners), fire retardants, polycyclic aromatic hydrocarbons (organic compounds produced as byproducts of fuel burning) and plasticizers. Only the contaminants that were detected are listed. The concentrations of compounds listed were detected at very low levels well below existing standards and guidelines and are well within acceptable limits. The primary objective of this ongoing monitoring program is to identify priorities for drinking water protection through water quality data. Water quality samples are taken from raw source waters, not treated drinking water. A comprehensive list of analytical methods, compounds, and detection limits is available in each Analytical Report (search DEQ database or by request) and information is summarized at <http://www.oregon.gov/deq/wq/programs/Pages/DWPAssessments.aspx>

Key to Figures and Tables including Notes and Symbols Updated Source Water Assessments

Inventory of Potential Sources of Pollution (Table 2 and Figures)

This information is intended to supplement the original Source Water Assessment completed for the water system between 2000 and 2005 by DEQ and Oregon Health Authority. This update should be used in conjunction with the original inventory. DEQ can provide more information on potential impact, risk and status as the public water system moves into developing protection strategies.

The inventory of potential sources of pollution is based on the readily-available state and federal regulatory databases listed below and general categories of land use/ownership. The primary intent is to identify and locate significant potential sources of contaminants of concern. Areas with agricultural, septic systems, or managed forests are generally not identified in the regulated databases but are presented in the figures as a factor of land ownership/use.

It is important to remember that the sites and areas identified are only potential sources of contamination to the drinking water. Water quality impacts are not likely to occur when contaminants are used and managed properly and land use activities occur in such a way as to minimize erosion and contaminant releases.

It is highly recommended that the community “enhance” or refine the delineation of the sensitive areas and the identification of the potential contamination sources through further research and local input. If there were no potential sources of contamination identified during the review of regulatory databases or community’s enhanced inventory, the water system and community should consider the potential for future development to impact the source water.

Table 2 Header	Description
Database Identifier (DB_ID)	Database Type and site name for identified potential pollutant
Site Identifier (Site ID)	Program specific identifier. This is the number or name used to look the site up in the programs regulatory database.
Status	Select information on the site that helps to evaluate potential risk to water quality
Common Name, Address, City	Common Name, Address and City as listed in the regulatory database. Note that some sites may have addresses associated with responsible party, not the physical location of the site.
County	County site is located in
Retrieval Date (Ret_Date)	Date the information was retrieved from the individual programs regulatory database
Data Source	Source for geographic information system (GIS) data
State and Federal Regulatory Database Information	
CAFO 	Oregon Department of Agriculture's Confined Animal Feeding Operation database of livestock owners. Includes permitted, non-permitted, and applications. Status indicates facility designation and animal type. Permits typically address conditions for animal waste management. More information at http://www.oregon.gov/ODA/programs/NaturalResources/Pages/CAFO.aspx
DOGAMI 	Oregon Department of Geology and Mineral Industries list of mining sites. Status includes permit status and primary material extracted.

<p>ECSI</p> <p></p>	<p>DEQ Environmental Cleanup Site Information database. Includes the U.S. EPA National Priorities List (NPL) and the U.S. EPA Comprehensive Environmental Response, Compensation and Liability Information System (CERCLA) list. Includes sites where further assessment or action is needed. More information available at http://www.oregon.gov/DEQ/Hazards-and-Cleanup/env-cleanup/Pages/ecsi.aspx</p>
<p>ECSI-NFA</p> <p></p>	<p>DEQ Environmental Cleanup Site Information database site where no further action (NFA) is required. Public water system may consider verifying with DEQ that standards used during site investigation were protective of drinking water.</p>
<p>HW</p> <p>  LQG  SQG or CEG </p>	<p>DEQ Hazardous Waste generators that submit an annual report to DEQ. This list includes active facilities in HazWaste.NET (http://www.oregon.gov/DEQ/Hazards-and-Cleanup/hw/Pages/HW-Reporting.aspx). Status includes information on generator size including LQG (Large Quantity Generator), SQG (Small Quantity Generator), CEG (Conditionally Exempt Generator), and Unknown (may be used oil or universal waste activities or old generators that require further assessment).</p>
<p>HW/TSD</p> <p></p>	<p>DEQ Hazardous Waste Program registered sites that treat, store or dispose of hazardous waste. Includes both active and inactive sites in the process of closing or in post-closure care that are registered in HazWaste.NET (http://www.oregon.gov/DEQ/Hazards-and-Cleanup/hw/Pages/HW-Reporting.aspx).</p>

Key to Figures and Tables including Notes and Symbols Updated Source Water Assessments

LUST		DEQ leaking underground storage tank (LUST) list - includes sites that have reported releases from petroleum-containing underground storage tanks, including residential heating oil tanks, regulated tanks at gas stations and other commercial facilities, and non-regulated tanks.
LUST-NFA		DEQ leaking underground storage tank (LUST) list where no further action (NFA) is required or cleanup is completed. PWS may consider verifying with DEQ that standards used during site investigation were protective of drinking water.
Oil & Gas Wells		Oil and Gas wells from OR Department of Geology and Mineral Industries. Only includes wells with a status of "permitted".
OSMB		Oregon State Marine Board's Boating Access Sites.
School		School as identified by Department of Human Services. Further evaluation may be needed to identify if school has onsite/septic system, pesticide use, chemistry lab, vehicle maintenance, or other potential contaminant sources.
SFM-HSIS AST		Aboveground storage tank(s) as identified in the State Fire Marshall Hazardous Material Information System (HMIS) site list. Aboveground tanks storing gas products were not included since gaseous compounds rarely pose a threat to surface water or groundwater. Additional information on material stored and tank size is available upon request.
SFM (HSIS)		State Fire Marshall Hazardous Material Information System (HMIS) site list. Status indicates number of different chemicals stored on site. A full list of chemicals with information on storage type and a range of amounts is available on request. Information on materials in a gas-form was not included in the chemical counts since gaseous compounds rarely pose a threat to surface water or groundwater.
Stream Crossing/Bridge		Oregon Department of Transportation structure in the "Bridge" layer for interstates, highways, or Oregon Routes. Does not include crossings over ODOT 2012 Roads layer. Includes some culverts. Name indicates water body (or other structure) crossed and the highway/route name.
SW		DEQ Active Solid Waste Disposal Permits list. Status includes permit type and activity (active, terminated, closure, pending). Solid waste disposal site permits are issued for the following facility types: landfill, solid waste treatment, transfer station/material recovery, composting, incineration, conversion technology, and energy recovery.
UIC – Stormwater		DEQ Underground Injection Control (UIC) list of facilities with registered underground injection control systems that manage Stormwater. Status includes type and number of UIC wells registered.
UIC – Non-Stormwater		DEQ Underground Injection Control (UIC) facilities with registered underground injection control systems that do not manage stormwater. Status includes type and number of UIC wells registered.
UST		DEQ registered underground storage tank (UST) list with details on number of tanks upgraded to current standards, decommissioned and with unknown status that require further assessment.
WQ SIS		DEQ Site Information System (SIS) which includes Water Pollution Control Facility (WPCF) permits where discharge to surface water is not allowed and National Pollutant Discharge Elimination System (NPDES) permits for "point source" discharges into surface water. Includes both individual permits (site specific) and general permits covering a category of similar discharges.
WQ SIS-WWTP		Subset of water quality Site Information System (SIS) for domestic wastewater treatment plants that discharge to surface water
WQ SIS Outfalls		Water quality effluent outfalls - location of permitted outfall to water body. May vary from facility address or permitted activity location.

Key to Figures and Tables including Notes and Symbols Updated Source Water Assessments

WQL Streams/ Lakes TMDL approved or needed ——— Insufficient data - - - - -	Streams and lakes identified by DEQ under Section 303(d) of the Clean Water Act as Water Quality Limited and either having (Category 4A) or needing (Category 5) a Total Maximum Daily Load pollutant load limit. Streams and lakes with insufficient data (Category 3) to make a determination are also shown. Based on Oregon's 2012 Integrated Report and 303(d) list. Contact DEQ basin coordinator for more information (http://www.oregon.gov/deq/FilterDocs/basincoordinators.pdf)
Transportation Sources	
Interstate/Highway Interstate ——— U.S. Roads ——— Oregon Routes ———	Oregon Department of Transportation interstate, highway, road or route identified in the Integrated Transportation Information System database.
Roads ———	Oregon Department of Transportation 2012 Roads layer - note roads are usually mapped by section so there will be many duplications of road names.
Railways —+	Railways
Stream Crossing/Bridge ●	Oregon Department of Transportation structure in the "Bridge" layer for interstates, highways, or Oregon Routes. Does not include crossings over ODOT 2012 Roads layer. Includes some culverts. Name indicates water body (or other structure) crossed and the highway/route name.

Appendix #4

Funds and Resources for Drinking Water Source Protection

This document provides brief descriptions and contact information for resources available to public water systems, including grants and loans to fund drinking water infrastructure and source protection projects. DEQ's list of ["Technical Information and Factsheets for Water Quality Protection"](#) provides other websites and resources available to public water systems and community members seeking to work on watershed protection.

Note: The Internet links listed in this document were included as a convenience for the users of this document. All URL Addresses were functional at the time this publication was last updated (January 2018).

Oregon Health Authority (OHA)

Drinking Water Services

Phone: 971-673-0405

Website: www.healthoregon.org/dwp

The Oregon Health Authority (OHA) is the primacy agency for the implementation of the federal Safe Drinking Water Act (SWDA) in Oregon. ORS 338.277 authorizes the OHA to administer the federal Safe Drinking Water Act in Oregon as the Primacy Agency in agreement with the federal government. ORS 448.131 further authorizes the adoption of standards necessary to protect public health through insuring safe drinking water within a water system. Standards in OAR 333-061 outlines requirements for systems to meet MCLs, submit to periodic inspections, and meet enforcement requirements as administered by OHA. As the primacy agency, OHA also approves drinking water treatment plans and sets construction standards, operator certification standards, and enforces rules to ensure safe drinking water. The OHA website has extensive information on drinking water treatment requirements: <http://healthoregon.org/dwp>

In order to assist systems in complying with standards, OHA also provides technical assistance and oversight of grants and loans from the Safe Drinking Water Act for public water system operation and improvements. *For those Safe Drinking Water Act loans and grant funds, the Oregon Health Authority partners with Oregon Infrastructure Finance Authority to provide the financial services (see below).*

Business Oregon - Infrastructure Finance Authority (IFA)

Infrastructure Finance Authority (IFA)

Municipal Infrastructure Funding

Phone: (503) 986-0123

Website: www.orinfrastructure.org

IFA is a division of Business Oregon that provides funding for municipally owned infrastructure projects. IFA manages federal infrastructure funds for agencies such as Oregon Health Authority and Housing and Urban Development. IFA is not a regulatory agency but collaborates and supports our state and federal partners with financing programs and technical assistance.

By: Sheree Stewart

Internet URLs functional as of 1/3/2018. Document is also available at:

<http://www.oregon.gov/deq/wq/programs/Pages/DWP-Funding.aspx>

The list of available funding programs for drinking water infrastructure and source protection is:

- Safe Drinking Water Revolving Loan Fund (SDWRLF)
- Drinking Water Source Protection Fund (DWSP)
- Water/Wastewater Financing Program (WWFP)
- Special Public Works Fund (SPWF)
- Community Development Block Grant Program (CDBG)
- Port Revolving Loan Fund (PRLF)

Safe Drinking Water Revolving Loan Fund (SDWRLF)

This loan program funds drinking water system improvements needed to maintain compliance with the Federal Safe Drinking Water Act. The Safe Drinking Water Fund is funded by annual grants from the U.S. Environmental Protection Agency (EPA) and matched with funds from the state Water/Wastewater Financing Program. The program is managed by the Oregon Health Authority (OHA), Drinking Water Services. The loans are managed by the Oregon Infrastructure Finance Authority (IFA).

The Safe Drinking Water Revolving Loan Fund (SDWRLF) is designed for water source, treatment, distribution, storage and related infrastructure projects. Funding is available for all sizes of water systems, although 15 percent of the funds are reserved for systems serving a population of fewer than 10,000. Eligible applicants can be owners of water systems that provide service to at least 25 year-round residents or systems that have 15 or more connections (or a nonprofit with 25 or more regular users). Owners can be a nonprofit, private party or municipality, but systems cannot be federally owned or operated.

To be eligible for funding, a project must solve an existing or potential health hazard or noncompliance issue under federal/state water quality standards. The following are the main types of eligible activities:

- Engineering, design, upgrade, construction or installation of system improvements and equipment for water intake, filtration, treatment, storage, transmission
- Acquisitions of property or easements
- Planning, surveys, legal/technical support and environmental review
- Investments to enhance the physical security of drinking water systems, as well as water sources

SDWRLF loan amount: The program provides up to \$6 million per project (more with additional approval) with the possibility of subsidized interest rate and principal forgiveness for a Disadvantaged Community. The standard loan term is 20 years or the useful life of project assets, whichever is less, and may be extended up to 30 years under SDWRLF for a Disadvantaged Community. Interest rates are 80 percent of state/local bond index rate.

To apply, the municipality should first submit a Letter of Interest to Oregon Health Authority where it will be rated and ranked. Call Oregon OHA Drinking Water Services at 971-673-0422 or go to the OHA website: www.healthoregon.org/srf

Projects placed on the Project Priority List will be invited to apply through IFA for funding. Contact your IFA Regional Coordinator for assistance and more information. Call IFA at 503-986-0123 or <http://www.orinfrastructure.org/>

Drinking Water Source Protection Fund (DWSP)

From the Safe Drinking Water Act, loans and grants are also available for drinking water protection projects: low interest *loans up to a maximum of \$100,000 per project*, and *grant funds up to \$30,000 per water system*. Eligible systems include any public and privately-owned Community and Nonprofit Non-Community water systems with a completed Source Water Assessment are able to demonstrate a direct link between the proposed project and maintaining or improving drinking water quality. Eligible activities include those that lead to risk reduction within the delineated source water area or would contribute to a reduction in contaminant concentration within the drinking water source. Projects can take either a local or regional approach. Local projects are defined as activities that concentrate on a public water system's source area(s). Regional projects are defined as activities that involve multiple communities and/or water systems attempting to address a common source water issue or group of issues.

The categories for eligible projects for DW Source Protection funding include the following:

Refined Delineation OHA and DEQ have completed delineations for most drinking water source areas (DWSA) for the community and non-community public water systems. DWSAs include aquifer recharge areas for groundwater sources and watershed areas for surface sources. DW Source Protection funding can be used to complete, update, or refine DWSA delineations using new or additional site-specific information as part of a more comprehensive protection strategy.

Updated Assessment

Inventory – Projects that improve upon existing potential contaminant source inventories available from the DEQ database, Geographic Information System, and Assessment Reports prepared by OHA/DEQ. A project could involve expanding or updating the inventory of land uses or existing and potential point and non-point contaminant sources.

Evaluation – Projects establishing a water quality monitoring project to evaluate existing and potential threats to water quality. This could include evaluating and prioritizing potential threats (or protection activities) based upon new or more detailed information.

Source Protection Planning

Projects designed to identify appropriate protection measures, including development of a comprehensive DW Source Protection plan, educational projects, projects to identify and ensure implementation of Best Management Practices (BMPs), development of local DW Source Protection ordinances, development of restoration or conservation plans for the source area for future easement or land acquisition.

Implementation

Funds can be used to implement many types of protection strategies in drinking water source areas. This can include implementation of any *eligible activities that will reduce risks within the source water area or would contribute to a reduction of contaminant concentration within the drinking water source(s)*.

Examples of the types of projects that can be funded include:

- Implementing drug-take-back projects in source areas
- Projects for reducing pesticide application rates and loadings in source area
- Implementing pesticide and household hazardous waste collection events
- Closure of high-risk abandoned or unused (private or irrigation) wells close to supply well
- Projects for reforestation or replanting in sensitive or riparian areas
- Installation of fencing to protect sensitive riparian source areas
- Installation of signs at boundaries of zones or protection areas
- Projects for assessing risks from onsite systems near supply wells, inspections, pump-outs, or decommissioning onsite systems.
- Secondary containment for high-risk ABOVE ground tanks
- Focused workshop events for household/business instruction for changing to alternative nonhazardous product usage (“green chemical” products)
- Seismic spill prevention or inspection project in proximate areas for high-risk sources
- Permanent abandonment (i.e. filling) of inadequately constructed private wells within the source area
- Installation of fencing around the immediate intake or well area to provide protection
- Structures to divert contaminated stormwater runoff affecting the source area
- Set up ecosystem services (or similar) project in watershed to fund preservation areas
- Implementation of pollution prevention or waste reduction projects
- Restoration and/or conservation projects within the drinking water source area
- Implementation of water reuse and other conservation measures related to source protection
- Implementation of best management practice projects
- Implementation of conservation easements to protect sensitive source areas
- Implementation of a drinking water source protection ordinance
- Establishing management plans for easements or lands purchased within source areas
- Development of educational flyers/brochures for purposes of public education

- Purchase of lands within the drinking water source area (funded only via low interest loans)

Any *Public and Privately-owned Community and Nonprofit Non-Community water systems* with a completed *Source Water Assessment* are eligible for funds. A “community water system” is defined as a public water system that has 15 or more service connections used by year-round residents, or which regularly serves 25 or more year-round residents. This includes water systems that are owned privately, by non-profit or public entities such as a city, district, or port. A “nonprofit non-community water system” is a public water system that is not a community water system and that regularly serves at least 25 people (more than 6 months per year) and is legally recognized under Oregon law as a nonprofit entity.

For the source water protection funds, contact OHA regarding the letter of interest submittal schedule. Call Oregon OHA Drinking Water Services at 971-673-0422 or go to the OHA website: www.healthoregon.org/srf or contact IFA at 503-986-0123; www.orinfrastructure.org

Water/Wastewater Funding Program (WWFP)

This loan program funds the design and construction of public infrastructure needed to ensure compliance with the Safe Drinking Water Act or the Clean Water Act. The public entities that are eligible to apply for the program are cities, counties, county service districts, tribal councils, ports, and special districts as defined in ORS 198.010. Municipalities must either have a documented compliance issue or the potential of a compliance issue in the near future.

Allowable funded project activities may include:

- Construction costs, including Right of Way and Easements, for improvement or expansion of drinking water, wastewater or stormwater systems
- Design and construction engineering
- Planning/technical assistance for small communities

WWFP Loans

The maximum loan term is 25 years or the useful life of the infrastructure financed, whichever is less. The maximum loan amount is \$10 million per project (more with additional approval) through a combination of direct and/or bond funded loans. Loans are generally repaid with utility revenues or voter approved bond issues. A limited tax general obligation pledge also may be required. "Credit worthy" borrowers may be funded through the sale of state revenue bonds.

WWFP Grants

Grant awards up to \$750,000 may be awarded based on a financial review. An applicant is not eligible for grant funds if the applicant's annual median household income is equal or greater than 100 percent of the state average median household income for the same year.

Funding for Technical Assistance

The Infrastructure Finance Authority offers technical assistance financing for municipalities with populations of less than 15,000. The funds may be used to finance preliminary planning, engineering studies and economic investigations. Technical assistance projects must be in preparation for a construction project that is eligible and meets the established criteria.

Grants up to \$20,000 may be awarded per project.

Loans up to \$60,000 may be awarded per project.

To apply, call IFA at 503-986-0123, then contact your IFA Regional Coordinator for assistance and more information. <http://www.orinfrastructure.org/>

Special Public Works Fund (SPWF)

The Special Public Works Fund (SPWF) provides funds for publically owned facilities that support economic and community development in Oregon. Funds are available to public entities for planning, design, purchasing, improving and constructing publically owned facilities, replacing publically owned essential community facilities, emergency projects as a result of a disaster, and for planning. Public agencies that are eligible to apply for

funding are cities, counties, county service districts (ORS 451), tribal councils, ports, districts as defined in ORS 198.010, and airport districts (ORS 838).

SPWF Loans

Loans for development (construction) projects range from less than \$100,000 to \$10 million (more with additional approval). The Infrastructure Finance Authority offers very attractive interest rates that reflect tax-exempt market rates for highly qualified borrowers. Initial loan terms can be up to 25 years or the useful life of the project, whichever is less.

SPWF Grants

Grants are available for construction projects that create or retain traded-sector jobs. They are limited to \$500,000 or 85 percent of the project cost, whichever is less, and are based on up to \$5,000 per eligible job created or retained. Limited grants are available to plan industrial site development for publically owned sites and for feasibility studies.

To apply, call IFA at 503-986-0123, then contact your IFA Regional Coordinator for assistance and more information. <http://www.orinfrastructure.org/>

Community Development Block Grant (CDBG)

Grants and technical assistance are available to develop livable urban communities for persons of low and moderate incomes by expanding economic opportunities and providing housing and suitable living environments. Non-metropolitan cities and counties in rural Oregon can apply for and receive grants. *[Oregon tribes, urban cities (Albany, Ashland, Bend, Corvallis, Eugene, Gresham, Hillsboro, Medford, Portland, Salem and Springfield) and counties (Clackamas, Multnomah, Washington) receive funds directly from HUD.]* Funding amounts are based on the applicant's need, the availability of funds, and other restrictions defined in the program's guidelines. The maximum available grant for drinking water system projects is \$3,000,000.

All projects must meet one of three national objectives:

- The proposed activities must benefit low- and moderate-income individuals.
- The activities must aid in the prevention or elimination of slums or blight.
- There must be an urgent need that poses a serious and immediate threat to the health or welfare of the community.

To apply, call IFA at 503-986-0123, then contact your IFA Regional Coordinator for assistance and more information. <http://www.orinfrastructure.org/>

Port Revolving Loan Fund (PRLF)

The Port Revolving Loan Fund (PRLF) is a loan program to assist Oregon ports in the planning and construction of facilities and infrastructure. Ports must be incorporated under ORS Chapter 777 or 778. The Fund may be used for port development projects (facilities or infrastructure) or to assist port-related private business development projects. The variety of eligible projects is very broad and may include water-oriented facilities, industrial parks, airports and commercial or industrial developments. Eligible project costs can include engineering, acquisition, improvement, rehabilitation, construction, operation, and maintenance or pre-project planning. Projects must be located within port district boundaries. The maximum loan amount is \$3 million at any one time. The loan term can be as long as 25 years or the useful life of the project, whichever is less. Interest rates are set by the IFA at market rates, but not less than Treasury Notes of a similar term minus one percent.

Note: Flexible manufacturing space projects will not accrue interest until the building is at least 25 percent occupied or until three years after the date of the loan contract, whichever is earlier.

To apply, call IFA at 503-986-0123, then contact your IFA Regional Coordinator for assistance and more information. <http://www.orinfrastructure.org/>

Oregon Department of Environmental Quality (DEQ)

Clean Water State Revolving Fund (CWSRF)

Clean Water State Revolving Fund

503-229-6412

Website: <http://www.oregon.gov/DEQ/wq/cwsrf/Pages/default.aspx>

Low-cost loans for planning, design, and construction projects to attain and maintain water quality standards, and necessary to protect beneficial uses such as fish habitat, drinking water sources, irrigation, and recreation. Eligible borrowers are public entities, such as cities and counties, Indian tribal governments, sanitary districts, soil and water conservation districts, irrigation districts, various special districts and some intergovernmental entities.

CWSRF offers:

- Low-cost loans and bond purchases
- Lower than market interest rates
- Fixed interest rates
- Terms up to 30 years
- Up to 100% of eligible costs covered
- No match required
- Repayment begins after project is constructed
- No pre-payment penalty
- Additional financial incentives, including principle forgiveness

Applications are accepted year round with scheduled review and ranking in the first week of January, May and September. Contact the Oregon Department of Environmental Quality (DEQ); for a list of CWSRF project officers, go to <http://www.oregon.gov/deq/wq/cwsrf/Pages/CWSRF-Contacts.aspx>.

Financial incentives make CWSRF loans worth exploring. Principle forgiveness is available for communities meeting affordability criteria, or for meeting green project criteria. Implement a non-planning nonpoint source project *and* a traditional point source wastewater treatment project through the same application to reduce your interest rate on the combined two projects to as low as 1%. This combined application is called a sponsorship option.

CWSRF Pollution Reduction Funding

The Clean Water State Revolving Fund loan program provides low-cost loans to public entities for the planning, design or construction of both point source and nonpoint source projects that *prevent or mitigate water pollution*. Wastewater facility improvements and stormwater management projects are funded with CWSRF.

CWSRF loans fund development of nonpoint source water quality improvement plans, such as an integrated water resources plan and a regional or municipality-wide stormwater management plan. Planning loans can also fund the establishment of watershed partnerships, local ordinances to implement a stormwater master/management plan, engineering and development standards for new and redevelopment, permanent riparian buffers, floodplains, wetlands and other natural features.

CWSRF offers a Local Community Loan, which allows the borrower to make loans to private entities like home owners and farmers. The Local Community Loans fund the repair and replacement of failing decentralized systems. This loan type can also fund nonpoint source agricultural best management practices such as building manure containment structures, manure digesters, and fences to protect riparian resources capture and convert methane, and purchase calibrated application equipment.

CWSRF loans fund a variety of nonpoint source watershed improvement implementation projects such as establishing or restoring permanent riparian buffers and floodplains, and daylighting streams from pipes. Loans can fund protecting and restoring streamside areas, wetlands and floodplains, and to acquire riparian land, wetlands, conservation easements, and land to protect drinking water sources.

More information on DEQ's Clean Water State Revolving Fund program can be found here:

<http://www.oregon.gov/DEQ/wq/cwsrf/Pages/default.aspx>. For specific information on the Sponsorship Option, Planning Loans, Nonpoint Source Loans, or Local Community Loans, see

<http://www.oregon.gov/DEQ/wq/cwsrf/Pages/CWSRF-Application.aspx>. The application requirements for CWSRF loans may take some lead-time to develop and may require out-of-pocket expense to prepare. Prospective CWSRF applicants should discuss any questions about the required content of these items with a regional DEQ CWSRF Project Officer at the earliest opportunity (<http://www.oregon.gov/DEQ/wq/cwsrf/Pages/CWSRF-Contacts.aspx>).

Supplemental Environmental Projects (SEPs)

Supplemental Environmental Projects are administered by DEQ's Office of Compliance and Enforcement. When DEQ assesses civil penalties for environmental law violations, violators can offset up to 80% of their monetary penalty by agreeing to pay for a Supplemental Environmental Project that improves Oregon's environment. SEPs can be for pollution prevention or reduction, public health protection, environmental restoration and protection as long as it is a project that the respondent is not already required to do by law or where the project would be financially self-serving for the respondent. The work can be completed by a third-party like a local government, watershed council, non-profit or private entity. Coastal PWSs can develop a "SEP Application" with general information that OCE can distribute to respondents. Community organizations with proposed projects are also free to contact respondents on their own initiative. The enforcement case does not necessarily have to be in the same area (watershed/county, etc.) as the environmental project or even address the same media (i.e. air/water/land). Interested parties can sign up for DEQ's public notifications via email at <http://www.oregon.gov/deq/Get-Involved/Pages/Public-Notices.aspx> - when signing up, select types of information (select "enforcement actions") and which counties or subbasins are of interest.

Nonpoint Source Implementation 319 Grants

Nonpoint Source Grants support implementation and planning projects that address water quality problems in surface and groundwater resources resulting from nonpoint source pollution. Funds are appropriated by DEQ through the U.S. Environmental Protection Agency under Section 319 of the Clean Water Act and support a wide variety of management activities, including technical assistance, site assessment, public awareness and education, training, technology transfer, demonstration projects, and monitoring to assess the success of specific nonpoint source implementation projects. Eligible applicants include government agencies, tribal nations and nonprofit organizations. For more information including funding availability, eligible projects, and application requirements and timelines see <http://www.oregon.gov/deq/wq/programs/Pages/Nonpoint-319-Grants.aspx>

Oregon Water Resources Department (WRD)

Water Resources Development Program
725 Summer Street NE, Suite A
Salem, OR 97301
Phone: 503-986-0900

The Water Resources Department is the state agency charged with administration of the laws governing surface and ground water resources. The Department's core functions are to protect existing water rights, facilitate voluntary streamflow restoration, increase the understanding of the demands on the state's water resources, provide accurate and accessible water resource data, and facilitate water supply solutions. WRD is charged with carrying out the water management policies and rules set by the Water Resources Commission and with overseeing the enforcement of Oregon's water laws. By law, all surface and ground water in Oregon belongs to the public.

WRD's mission is to serve the public by practicing and promoting responsible water management through two key goals:

- to directly address Oregon's water supply needs, and
- to restore and protect streamflows and watersheds in order to ensure the long-term sustainability of Oregon's ecosystems, economy, and quality of life.

WRD developed *Oregon's 2012 Integrated Water Resources Strategy* to help individuals and communities address instream and out-of-stream needs now and into the future, including water quantity, water quality and

ecosystem needs. More information can be found at:

https://www.oregon.gov/owrd/Pages/law/integrated_water_supply_strategy.aspx

There is funding available to support planning, feasibility studies, and implementation of water projects:

Place-Based Integrated Water Resources Planning

Place-based planning is a voluntary, locally initiated and led effort in which a balanced representation of water interests within a basin or watershed work in partnership with the state to: characterize current water resources and issues (water quantity, water quality, ecosystem health); understand current and future instream and out-of-stream water needs and demands; identify and prioritize strategic solutions to address water needs; and, develop a place-based integrated water resources plan that informs the state-wide strategy.

Recent cycle of funding included \$750,000 in grants; requires 25% cost-share.

For more information, contact Harmony Burright at 503-986-0913.

Feasibility Study Grants

Once potential projects are identified, communities often find it difficult to secure funding to assess their viability. This program component addresses that need by providing grant funding to cover 50% of the cost of conducting feasibility studies for potential water conservation, storage and reuse projects. A feasibility study is an assessment of the practicality of a proposed project or plan and can be used to determine if and how a project should proceed to the implementation phase.

Recent cycle of funding included \$2.8 million in grants; 50% cost share required.

For more information, contact Jon Unger at 503-986-0869.

Water Project Grants & Loans (formerly Water Supply Development Grants & Loans)

This account provides grants and loans to evaluate, plan and implement instream and out-of-stream water development projects that have economic, environmental and social/cultural benefits. Eligible projects include, but are not limited to projects that: increase water use efficiency; develop new or expanded storage; allocate federally stored water; promote water reuse or conservation; and protect or restore stream flows.

Recent cycle funding included \$14 million in grants or loans; 25% cost share required; applications accepted year round.

For more information, contact Jon Unger at 503-986-0869.

More details and updates for these grants can be found at:

http://www.oregon.gov/OWRD/pages/Water_Resources_Development_Program.aspx

Municipal Water Management and Conservation Planning

Municipal water management and conservation planning provides a process through which cities and other municipal water suppliers estimate long-range water supply needs and identify alternatives, including water conservation programs, to meet those needs. The Department requires many municipal water suppliers to prepare plans as conditions of their water use permits or permit extensions.

Water Rights

Oregon's water laws are based on the principle of prior appropriation. This means the first person to obtain a water right on a stream is the last to be shut off in times of low streamflows. In water-short times, the water right holder with the oldest date of priority can demand the water specified in their water right regardless of the needs of junior users. The date of application for a permit to use water usually becomes the priority date of the right. Watermasters respond to complaints from water users and determine in times of water shortage, which generally occur every year, who has the right to use water. Each summer as streamflows drop, watermasters regulate junior users to provide water to the more senior users. On many streams throughout the state, by the end of summer, there is only enough water to supply users who established their rights in the late 1800s. All of the more recently established rights will have been regulated off by the [watermaster](#).

There are “watermaster” offices located around the state. The watermaster office is an excellent source of local information. Watermasters can research water rights for a particular stream reach and provide supporting maps (above). During critical flow periods, watermasters regulate water usage to enable senior water right holders to satisfy their water right. The watermaster may also provide information regarding instream leases, ground water rights, cancellations, transfers of water rights, streamflow data, and water right information in general (list as of 6/16).

Oregon Department of Forestry (ODF)

Salem Headquarters
2600 State Street
Salem, Oregon 97310

<http://www.oregon.gov/ODF/Pages/index.aspx>

The Oregon Department of Forestry manages and regulates activities on non-federal forestland in Oregon. There are three main divisions under ODF-- Fire Protection, Private Forests, and State Forests. The Private Forests Division administers the Forest Practices Act and various forestry incentive programs and employs the use of about 50 Stewardship Foresters who work closely with landowners and operators. The State Forests Division is responsible for forest management to provide economic, environmental, and social benefits to Oregonians.

Financial incentive programs are aimed at encouraging and assisting landowners in managing their resources and meeting their objectives. Typical forestry projects can be aimed at protecting the landowner's resources/investment from fire or insect and disease infestation, to increasing its monetary and environmental value in the future.

Information about all ODF and federal forestry-related grants and incentive programs can be found at:

<http://www.oregon.gov/ODF/AboutODF/Pages/GrantsIncentives.aspx>

Community Forest Program

The Community Forest and Open Space Conservation Program is a federal financial assistance program with grants available to local governments, Indian tribes, and qualified nonprofit organizations to establish community forests and sustainably manage them for many public benefits, including recreation, income, wildlife habitat, stewardship demonstration sites, and environmental education.

Conservation Stewardship Program

To help landowners and operators maintain existing stewardship and adopt additional conservation on privately-owned, non-industrial working forests and agricultural lands.

Forest Legacy Program

The Forest Legacy Program is a national program that addresses privately-owned forestlands that face threats of conversion to non-forest use by development pressures. The goal of the Forest Legacy Program is to promote stewardship and sustainable management of private forest lands by maintaining working forests that conserve important forest resource and conservation values. Forest Legacy provides funds for eligible private forestlands for the purchase of development rights through either conservation easement or fee-title acquisition into public ownership. All properties entered into Oregon's Forest Legacy Program – either through conservation easement, fee acquisition or donation – have their forest resources and conservation values protected and managed in accordance with a State Forester-approved Forest Stewardship Plan (see below).

Forest Stewardship Program

Oregon's Forest Management Planning System recognizes that forest management planning is a journey – Pathways to Stewardship -- involving several distinct steps. A landowner's initial interest may be related to a specific project or action that is pressing on their property – such as reducing hazardous wildfire fuels or combating an invasive weed. Landowner assistance organizations and agencies usually first cross paths through outreach efforts defined around mutual interests or resource concerns. Landowners who are just beginning the management planning process begin a more formal journey by taking the [Woodland Discovery](#) step. Woodland Discovery consists of gathering basic property information and solidifying management goals. The remaining steps for completing your forest management plan include organizing the planning elements into specific management planning modules: soil and water, forest vegetation, fish and wildlife, access and protection, scenery and enjoyment and tax and business. Every step completed along the way results in the identification of specific actions that a landowner can take to improve conditions of the forestland or otherwise meet goals in owning forestland. Completion of a forest management plan opens up formal types of engagement such as forest certification and the enrollment of lands into specialized conservation programs that define a long-term commitment to sustainable forestry.

Healthy Forests Reserve Program (HFRP)

The goal is to restore and enhance ecosystems and habitat for threatened and endangered species while promoting sustainable timber harvests on working forest lands.

Department of Agriculture Natural Resources Program

635 Capitol St. NE
Salem, OR 97301-2532
Phone: 503 986-4700

<http://www.oregon.gov/ODA/programs/NaturalResources>

The Oregon Department of Agriculture (ODA) is responsible for developing plans to prevent and control water pollution from agricultural activities and soil erosion on rural lands. ODA's Natural Resources Program aims to conserve, protect, and develop natural resources on public and private lands in order to ensure that agriculture will continue to be productive and economically viable in Oregon. Natural Resources Programs work to do the following:

- Address water quality and natural resource conservation on agricultural lands
- Protect Oregon's environment and public health by ensuring the proper and legal sale, use, and distribution of pesticide products
- Assist local soil and water conservation districts as they help landowners properly manage Oregon's natural resources

More information on the Agricultural Plan Areas and Regulations can be found at:

<https://www.oregon.gov/ODA/programs/NaturalResources/AgWQ/Pages/AgWQPlans.aspx>

Information on local management plans and your area's ODA Water Quality Specialist can be found at:

<http://www.oregon.gov/ODA/programs/NaturalResources/AgWQ/Pages/AgWQPlans.aspx>

More information on the regulation and use of pesticides can be found at:

<http://www.oregon.gov/ODA/programs/Pesticides/Pages/default.aspx>

Department of Agriculture Pesticide Analytical and Response Center (PARC)

<http://www.oregon.gov/ODA/programs/Pesticides/Pages/PARC.aspx>

The Pesticide Analytical and Response Center (PARC) was created by executive order in 1978. The program was reauthorized under the Oregon Department of Agriculture (ODA) as ORS 634.550, in 1991.

PARC is mandated to perform the following activities with regard to pesticide-related incidents in Oregon that have suspected health or environmental effects: Collect incident information, mobilize expertise for investigations, identify trends and patterns of problems, make policy or other recommendations for action, report results of investigations, and prepare activity reports for each legislative session.

PARC does not have regulatory authority. Their primary function is to coordinate investigations to collect and analyze information about reported incidents. Investigation coordination includes collecting reports produced by member agencies and consultation as necessary with a toxicologist with Oregon State University. Member agencies conduct most of the investigations and take any necessary enforcement action(s). The eight member agencies include the following: [Oregon Health Authority \(OHA\)](#), [Oregon Department of Fish and Wildlife \(ODF&W\)](#), [Oregon Department of Environmental Quality \(DEQ\)](#), [Oregon Department of Forestry \(ODF\)](#), [Oregon Occupational Safety and Health Administration \(OR OSHA\)](#), [Office of the State Fire Marshal \(SFM\)](#), [Oregon Poison Center \(OPC\)](#), [Oregon Department of Agriculture \(ODA\)](#).

To report a pesticide incident that has impacted people, animals, or the environment, contact:

Theodore Bunch Jr., PARC Coordination Team Leader at 503-986-6470 or toll-free at 844-688-7272

PARC@oda.state.or.us or Christina Higby, Citizen Advocate Liaison at 503-986-5105 chigby@oda.state.or.us

Oregon Watershed Enhancement Board (OWEB)

775 Summer St. NE Suite 360
Salem, OR 97301
Phone: (503) 986-0178
Website: www.oregon.gov/OWEB

The Oregon Watershed Enhancement Board (OWEB) is a state agency that provides grants to help Oregonians take care of local streams, rivers, wetlands and natural areas. Community members and landowners use scientific criteria to decide jointly what needs to be done to conserve and improve rivers and natural habitat in the places where they live. OWEB grants are funded from the Oregon Lottery, federal dollars, and salmon license plate revenue. The agency is led by a 17 member citizen board drawn from the public at large, tribes, and federal and state natural resource agency boards and commissions. OWEB provides grants to projects that contribute to the Oregon Plan for Salmon and Watersheds and the Oregon Conservation Strategy by protecting, restoring and improving clean water and fish and wildlife habitat. See the OWEB website for more information on grants: <http://www.oregon.gov/OWEB/GRANTS/pages/index.aspx>.

Oregon Sea Grant (OSG)

Oregon State University
Corvallis, Oregon
Phone 541-737-2714
<http://seagrants.oregonstate.edu/>

Oregon Sea Grant serves Oregon coastal communities through integrated research, education and public engagement on ocean and coastal issues. Based at Oregon State University, OSG is part of the national network of NOAA Sea Grant College Programs, dedicated to promoting environmental stewardship, long-term economic development and responsible use of America's coastal, ocean and Great Lakes resources. OSG targets research on better defining the relationships between the many pressures that can degrade water quality: climate change, upland and coastal land use, fish and habitat restoration efforts, aquatic invasive species. OSG works with groups whose interests sometimes come in conflict - landowners, outdoor recreationists, farmers and woodland managers, local government, the general public - to seek solutions that will help sustain healthy watersheds and our precious water resources. OSG focuses on the question of resilience - the ability to plan, adapt and rebound in the face of change by supporting physical and social science research aimed at better understanding ocean and coastal processes and the socio-economic barriers to hazard and climate change preparation. Publications and resources available from OSG can be found here: <http://seagrants.oregonstate.edu/sgpubs>.

OSG and OSU Extension produce textbooks and other publications on such topics as conservation-friendly gardening, sustainable living and low-impact development. OSG also partners with the Oregon State Marine Board to develop the Clean Vessel Act (CVA) Education Initiative. Funded by the Clean Vessel Act of 1992, the goal of the CVA Education Initiative is to improve boaters' awareness, accessibility and use of sewage pump-outs, dump stations, and floating toilets. Publications and resources available from OSG about watershed health can be found here: <http://seagrant.oregonstate.edu/sgps> by using "watersheds and wetlands" in the "Search by Subject" field.

Every two years, OSG awards approximately \$2 million in research grants addressing community preparedness for climate change, watershed health, other urgent or emerging regional needs with high relevance to coastal communities. For more information on grants, see: <http://seagrant.oregonstate.edu/research>

Source Water Collaborative – led by U.S. Environmental Protection Agency

Technical assistance and lists of resources and contacts are available from this national network that has worked to promote drinking water protection for several years. The Source Water Collaborative is a network of federal, state, and local organizations led by US EPA. Some of the key Source Water Collaborative members include the US EPA, US Department of Agriculture, AWWA, American Planning Association, ASDWA, ACWA, National Rural Water Association, Groundwater Protection Council, National Association of Counties, and The Trust for Public Land. Resources can be found here:

<http://sourcewatercollaborative.org/>

U.S. Environmental Protection Agency Catalog of Federal Funding Sources for Watershed Protection

This is an online, free searchable database of financial assistance sources (grants, loans, cost-sharing) available to fund a variety of watershed protection projects.

<https://ofmpub.epa.gov/apex/watershedfunding/f?p=fedfund:1>

U.S. Environmental Protection Agency Environmental Finance Centers

Free technical assistance is available through EPA's Environmental Finance Centers. There is currently no Environmental Finance Center for US EPA Region 10, but the resources are still available through the US EPA website. The program mission is to provide help to those facing the "how to pay" challenges of environmental protection. EFC is committed to helping the regulated community build and improve the technical, managerial, and financial capabilities needed to comply with federal and state environmental protection laws.

<https://www.epa.gov/waterfinancecenter/efcn>

U.S. Environmental Protection Agency Community Action for a Renewed Environment (CARE) Grants

Eligible Projects: Prevention of human exposure to harmful pollution; improve water quality. Form community-based collaborative partnerships; identifying and developing an understanding of the many local sources of risk from toxic pollutants and environmental concerns; and setting priorities for the reduction of the identified risks and concerns of the community

Eligible Applicants: Local, public non-profit institution/organizations, federally-recognized Indian tribal government, Native American organizations, private non-profit institution/organization, quasi-public nonprofit institution/organization both interstate and intrastate, local government, colleges, and universities

Funding Available: \$75,000 to \$100,000 with an average project funding of about \$90,000

How To Apply: www.epa.gov/care

U.S. Bureau of Reclamation Cooperative Watershed Management Program

Eligible Projects: Improve water quality; improve ecological resiliency of a river or stream; and to reduce conflicts over water at the watershed level by supporting the formation of watershed groups to develop local solutions to address water management issues

Eligible Applicants: States, Indian tribes, local and special districts (e.g., irrigation and water districts, county soil conservation districts, etc.), local governmental entities, interstate organizations, and non-profit organizations. To be eligible, applicants must also meet all of the following requirements: (1) Significantly affect or be affected by the quality or quantity of water in a watershed; (2) Be capable of promoting the sustainable use of water resources; (3) Be located in the western United States specifically: Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington.

Funding Available: \$22,000-\$100,000 in the past

How To Apply: <http://www.usbr.gov/WaterSMART/cwmp/index.html>

U.S. Department of Agriculture Farm Service Agency Conservation Programs

<http://www.fsa.usda.gov/programs-and-services/conservation-programs/index>

USDA Farm Service Agency oversees a number of voluntary conservation-related programs. These programs work to address a large number of farming and ranching related conservation issues including:

- Drinking water protection
- Reducing soil erosion
- Wildlife habitat preservation
- Preservation and restoration of forests and wetlands
- Aiding farmers whose farms are damaged by natural disasters

Source Water Protection Program (SWPP)

The SWPP is designed to protect surface and ground water used as drinking water by rural residents. Through a partnership with the National Rural Water Association, local teams are formed to develop plans to reduce pollutant impacts in rural areas.

<http://www.fsa.usda.gov/programs-and-services/conservation-programs/source-water-protection/index>

Conservation Reserve Program (CRP)

The CRP pays a yearly rental payment in exchange for farmers removing environmentally sensitive land from agricultural production and planting species that will improve environmental quality. In exchange for a yearly rental payment, farmers enrolled in the program agree to remove environmentally sensitive land from agricultural production and plant species that will improve environmental health and quality. Contracts for land enrolled in CRP are 10-15 years in length. The long-term goal of the program is to re-establish valuable land cover to help improve water quality, prevent soil erosion, and reduce loss of wildlife habitat.

<http://www.fsa.usda.gov/programs-and-services/conservation-programs/conservation-reserve-program/index>

Conservation Reserve Enhancement Program (CREP)

The CREP, an offshoot of CRP, targets high-priority conservation issues identified by local, state, or tribal governments or non-governmental organizations. In exchange for removing environmentally sensitive land from production and introducing conservation practices, farmers, ranchers, and agricultural land owners are paid an annual rental rate. Participation is voluntary, and the contract period is typically 10–15 years, along with other federal and state incentives as applicable per each CREP agreement.

<http://www.fsa.usda.gov/programs-and-services/conservation-programs/conservation-reserve-enhancement/index>

Emergency Conservation Program (ECP)

The ECP provides funding and technical assistance for farmers and ranchers to restore farmland damaged by natural disasters and for emergency water conservation measures in severe droughts. The ECP also provides funding and assistance to help ranchers and farmers install water conservation measures during severe drought.

<http://www.fsa.usda.gov/programs-and-services/conservation-programs/emergency-conservation/index>

Emergency Forest Restoration Program (EFRP)

The EFRP, which is very similar to the ECP, provides funding to restore privately owned forests damaged by natural disasters.

<http://www.fsa.usda.gov/programs-and-services/disaster-assistance-program/emergency-forest-restoration/index>

Farmable Wetlands Program (FWP)

The FWP is designed to restore wetlands and wetland buffer zones that are farmed. FWP gives farmers and ranchers annual rental payments in return for restoring wetlands and establishing plant cover.

<http://www.fsa.usda.gov/programs-and-services/conservation-programs/farmable-wetlands/index>

U.S. Department of Agriculture Natural Resources Conservation Service

NRCS provides farmers, ranchers and forest managers with free technical assistance, or advice, for their land. Common technical assistance includes: resource assessment, practice design and resource monitoring. The conservation planner will help you determine if financial assistance is right for you. Technical assistance is also available online through [Conservation Client Gateway](#).

More information about NRCS can be found on their home page:

<http://www.nrcs.usda.gov/wps/portal/nrcs/main/national/about/>

Environmental Quality Incentives Program (EQIP)

Grants are available for best management practices and conservation on private, non-industrial forestland and agricultural lands. Financial assistance is available to help plan and implement conservation practices that address natural resource concerns and for opportunities to improve soil, water, plant, animal, air and related resources on agricultural land and non-industrial private forestland. In addition, EQIP can help producers meet Federal, State, Tribal and local environmental regulations.

<http://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/financial/eqip/>

Eligible Applicants: Owners of land in agricultural or forest production or persons who are engaged in livestock, agricultural or forest production on eligible land and that have a natural resource concern on the land

Funding Available: Financial and technical assistance to agricultural and forestland producers through contracts up to 10 years. Not to exceed \$300,000 for all EQIP contracts entered into during any six-year period. If NRCS determines project has special environmental significance the payment limitation is a maximum of \$450,000.

Conservation Stewardship Program (CSP)

CSP helps agricultural producers maintain and improve their existing conservation systems and adopt additional conservation activities to address priority resources concerns. Through CSP, participants take additional steps to improve resource condition including soil quality, water quality, water quantity, air quality, and habitat quality, as well as energy. Participants earn CSP payments for conservation performance - the higher the performance, the higher the payment.

<http://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/financial/csp/>

Wetlands Reserve Easements (WRE)

WRE provides habitat for fish and wildlife, including threatened and endangered species, improve water quality by filtering sediments and chemicals, reduce flooding, recharge groundwater, protect biological diversity and provide opportunities for educational, scientific and limited recreational activities.

NRCS also provides technical and financial assistance directly to private landowners and Indian tribes to restore, protect, and enhance wetlands through the purchase of a wetland reserve easement.

<http://www.nrcs.usda.gov/wps/portal/nrcs/detail/or/home/?cid=stelprdb1249312>

Agricultural Land Easements (ALE)

ALE is designed to protect the long-term viability of the nation's food supply by preventing conversion of productive working lands to non-agricultural uses. Land protected by agricultural land easements provides additional public benefits, including environmental quality, historic preservation, wildlife habitat and protection of open space.

<http://www.nrcs.usda.gov/wps/portal/nrcs/detail/or/home/?cid=stelprdb1249312>

Emergency Watershed Protection (EWP)

The EWP program was set up by Congress to respond to emergencies created by natural disasters. The United States Department of Agriculture's Natural Resources Conservation Service is responsible for administering the program. EWP is designed to relieve imminent hazards to life and property caused by floods, fires, windstorms, and other natural occurrences. It is not necessary for a national emergency to be declared for an area to be eligible for assistance. Activities include providing financial and technical assistance to remove debris from streams, protect destabilized streambanks, establish cover on critically eroding lands, repairing conservation practices, and the purchase of flood plain easements. The purpose of EWP is to help groups of people with a common problem. EWP is generally not an individual assistance program. All projects undertaken must be sponsored by a political subdivision of the State, such as a city, county, general improvement district or conservation district, or by a tribal government.

<http://www.nrcs.usda.gov/wps/portal/nrcs/main/or/programs/financial/ewp/>

Other NRCS Programs

There are other NRCS programs that are specific to Oregon geographic areas---Wildfire Rehabilitation Initiative, Organic Initiative, drought funding, and restoration funding---see the Oregon NRCS link for more information on those: <http://www.nrcs.usda.gov/wps/portal/nrcs/main/or/programs/financial/eqip/>

Anyone applying for EQIP or any of the other NRCS grants for the first time should schedule a meeting with NRCS to discuss their options before moving forward.

U.S. Department of Agriculture Rural Development Water and Waste Disposal Direct Loans and Grants

Eligible Projects: Pre-construction and construction associated with building, repairing, or improving drinking water, solid waste facilities and wastewater facilities

Eligible Applicants:

- Cities or towns with fewer than 10,000 population
- Counties, special purpose districts, non-profit corporations or tribes unable to get funds from other sources at reasonable rates and terms

Funding Available: Loans (40-year term), grants in some cases, interest rates vary (currently 2.125 – 3.5%)

How To Apply: Applications accepted year-round on a fund-available basis. <http://www.rd.usda.gov/programs-services/water-waste-disposal-loan-grant-program>

U.S. Department of Commerce Community Development Block Grant Planning Program

Region 10 HUD

Seattle Regional Office

Phone: (206) 220-5101

<http://portal.hud.gov/hudportal/HUD?src=/states/washington/offices>

http://portal.hud.gov/hudportal/HUD?src=/program_offices/comm_planning/communitydevelopment/programs

Eligible Projects: Comprehensive plans, Infrastructure plans, Feasibility studies, Community action plans, Low-income housing assessments

Eligible Applicants: Projects must principally benefit low- to moderate-income people in non-entitlement cities and counties.

- Cities or towns with fewer than 50,000 people
- Counties with fewer than 200,000 people

Funding Available: Grants

- Up to \$24,000 for a single jurisdiction
- Up to \$35,000 for single jurisdiction projects that address urgent public health and safety needs
- Up to \$40,000 for multiple jurisdictions/joint application

How To Apply: <http://portal.hud.gov/hudportal/HUD?src=/states/washington/offices>

Rural Community Assistance Corporation (RCAC)

Environmental Programs

1020 S.W. Taylor Street Suite 450

Portland, OR 97205

Local contacts:

Chris Marko, Rural Development Specialist 503- 228-1780

RosAnna Noval, Rural Development Specialist 503-308-0207

Email: cmarko@rcac.org; moval@rcac.org

Website: www.rcac.org

At the national level, RCAC has a variety of loans for water and/or wastewater planning, environmental work, and other work to assist in developing an application for infrastructure improvements

Eligible Applicants: Non-profit organizations, public agencies, tribes, and low-income rural communities with a 50,000 population or less, or 10,000 or less if guaranteed by USDA Rural Development financing.

Funding Available:

- Maximum \$50,000 for feasibility loan
- Maximum \$350,000 for pre-development loan
- 1 year term
- 5.5% interest rate

How To Apply: Applications accepted anytime. www.rcac.org

National contact: Josh Griff, 720-951-2163, jgriff@rcac.org

Water Research Foundation - Source Water Protection Cost-Benefit Tool

This is a free, online suite of tools designed to assist in evaluating the triple bottom-line costs and benefits of different source water protection options. Cost/benefit calculations help evaluate, prioritize, justify, and ultimately implement source water protection initiatives. <http://www.swptool.org/index.cfm>

Healthy Watersheds Consortium

The Healthy Watersheds Consortium Grant Program has just published a Request for Proposals (RFP) to support local projects that protect and sustain healthy watersheds (including drinking water sources). Through this program, EPA will provide approximately \$3.75 million over six years to the U.S. Endowment for Forestry and Communities for projects that develop and/or support state, interstate, and tribal healthy watersheds programs and enhance collaboration among the many groups who benefit from protecting healthy watersheds such as drinking water utilities, hunters and fisherman, foresters and farmers, and more. The Endowment is also matching a portion of EPA's financial commitment to the partnership and expects to leverage additional funding from other public and private sources.

The goal of the Healthy Watersheds Consortium Grant Program is to accelerate strategic protection of healthy, freshwater ecosystems and their watersheds. This goal will be achieved by: Funding key projects identified in existing watershed protection or conservation plans; Building the sustainable organizational infrastructure, social support, and long-term funding commitments necessary to implement large-scale protection of healthy watersheds; and supporting innovative or catalytic projects that may accelerate or broadly advance the field of practice for watershed protection efforts. For more information and to view and download the RFP and other helpful documents, visit the website: <http://usendowment.org/partnerships/hwcgrantprogram.html>

For questions, please contact Peter Stangel at peter@usendowment.org.

Ecotrust

<http://www.ecotrust.org/>

Ecotrust works to protect and restore watersheds and the economic and public health of the communities that depend upon them. Ecotrust develops and applies strategic approaches that improve habitat for native fish and wildlife, create local jobs and recreational opportunities, increase public awareness of the value of nature's services like water, and ensure a more reliable access to clean water for all members of the Oregon communities. Ecotrust provides Ecosystem Services, GIS Analysis, Mapping, Cartography, Data and Software Development, Economic Impact Assessment, etc.

Ecotrust Forest Management

<http://ecotrustforests.com>

Ecotrust Forest Management is a for-profit forestland investment management company that acquires and manages land on behalf of investors and forestland owners to enhance forest health and productivity, and to produce a diverse array of forest products and services including timber, biomass, carbon, and improved habitat and water quality. Where possible, our goal is to transition land to long-term, local, stewards of land like Tribes, Community Forests, Public or State Agencies etc. EFM is adept at using a wide array of financing sources— New Market Tax Credits, carbon credits, conservation easements, and restoration funding — to supplement private capital resources in the acquisition and management of forestland. Contact: info@ecotrustforests.com

LAND TRUSTS

Resources to assist in locating a land trust can be found here:

<http://findalandtrust.org/states/oregon41>

Coalition of Oregon Land Trusts

The Coalition of Oregon Land Trusts (COLT) is a newly formed nonprofit representing and serving Oregon's land trusts. Its mission is to serve and strengthen the land trust community in Oregon. Oregon's land trust community is working at local, regional, and statewide scales with landowners, communities, public agencies and other partners to maintain the state's natural heritage and the economies it supports. COLT will accomplish its mission by strengthening public policies and programs that are supportive of land conservation, helping to build capacity within and across land trusts, and communicating to key audiences about the role of land trusts in conserving Oregon's natural heritage and healthy human communities that depend on it. There are currently 18 land trusts that are members of COLT.

Coalition of Oregon Land Trusts

322 NW 5th, Suite 312 Portland, OR 97209

Phone: 503-719-4732 <http://oregonlandtrusts.org/>

Land Trust Alliance

The Land Trust Alliance is a national conservation organization that works preserve land through conservation and easements, so land and natural resources get protected. The Alliance is based in Washington, D.C., and has several regional offices.

Northwest Conservation Manager

The Nature Conservancy

<http://www.nature.org/>

FOUNDATIONS

The Oregon Community Foundation / Community Grant Program

Eligible Projects: Community Livability, Environment & Citizen Engagement (*10 to 20 percent of grants*)

- Promote leadership development, volunteerism, immigrant integration, and civic participation
- Support stewardship and appreciation of Oregon's outdoor spaces and scenic beauty
- Address social, economic and environmental challenges or opportunities by bringing together disparate stakeholders
- Preserve places essential to communities' civic and historic identities

Eligible Applicants: nonprofits with tax-exempt status under Section 501(c)(3)

Funding Available: average grant is \$20,000

Contact: <http://www.oregoncf.org/grants-scholarships/grants/community-grants>

National Fish and Wildlife Foundation

Eligible Projects: Environmental Solutions for Communities (1:1 match required)

- Supporting sustainable agricultural practices and private lands stewardship;
- Conserving critical land and water resources and improving local water quality;
- Restoring and managing natural habitat, species and ecosystems that are important to community livelihoods;
- Facilitating investments in green infrastructure, renewable energy and energy efficiency; and
- Encouraging broad-based citizen and targeted youth participation in project implementation.

Eligible Applicants: non-profit 501(c) organizations, state government agencies, local governments, municipal governments, Indian tribes, educational institutions

Funding Available: grants range from \$25,000 to \$100,000

Contact: 202-595-2434 - Community-Based Conservation

Access Fund Foundation

Eligible Projects: land acquisitions; considering the management and financial resources of land ownership, the Access Fund views land acquisitions as a tool of last resort and have adopted the following guidelines for land acquisition projects. If you are requesting funds for a land acquisitions please call the Access Fund before submitting your application.

- The area must be imminently threatened with permanent closure or sale to an outside party that may consider land development opportunities or other uses threatening its climbing and/or access resources.
- The area can be acquired for a reasonable price (reasonable price being one that falls within existing market values and is not in excess of appraised value), together with a reasonable budget (including secured funding) or secured exit-strategy for management by another land trust, local climbers organization or governmental agency.
- A fully executed purchase agreement stating how the project will be funded is required before Access Fund grant funds will be allocated to any acquisition.
- A high degree of matching funds is required. The Access Fund's role in land acquisitions is as an additional, not primary, funding resource.
- Applicants whose projects require continued payments and/or financing should submit a plan describing how these payments will be met in the future. These include, but are not limited to, property tax payments, loan payments, lease and mortgage payments. This payment plan will be taken into consideration during the grant review process.

Eligible Applicants: Local climbing groups, individuals or organizations (Note: tax exempt 501(c)(3) status is not a pre-requisite); governmental agencies that wish to sponsor or organize a local project; conservation organizations and land trusts.

Funding Available: \$1,000 to \$4,000. (The Access Fund considers requests for over \$10,000, but these projects should have national significance and utilize a high degree of matching funds.)

Contact: <http://www.accessfund.org/>

The Collins Foundation

Eligible Projects: land acquisitions; grants are for projects that directly benefit the residents of Oregon

Eligible Applicants: nonprofits with tax-exempt status under Section 501(c)(3) / agencies that have current registration with the offices of the Oregon State Attorney General and the Secretary of State

Funding Available: varies; grants may range from \$3000 to \$150,000

Contact: www.collinsfoundation.org

Giles W. and Elise G. Mead Foundation

Eligible Projects: Preserving and improving the environment; primary emphasis forestry, fisheries and the sustainable use of natural resources in western North America

Eligible Applicants: nonprofits with tax-exempt status under Section 501(c)(3) in western North America

Funding Available: past grants ranged from \$15,000 to \$100,000

Contact: <http://www.gileswmeadfoundation.org/>

Rose E. Tucker Charitable Trust

Eligible Projects: giving limited to organizations and projects in Oregon, with emphasis on the metropolitan Portland area; land acquisition is eligible

Eligible Applicants: nonprofits with tax-exempt status under Section 501(c)(3)

Funding Available: past grants ranged from \$6,000 to \$150,000

How to Apply: apply anytime; board meets approximately every 2 months

Contact: Tuckertrust@stoel.com

Doris Duke Charitable Foundation

Eligible Projects: The foundation's grant-making is designed to provide frameworks and concrete examples of how practitioners can protect biodiversity in light of climate change through strategic land conservation. The program's adaptation efforts focus on three critical land conservation activities undertaken by non-profit organizations and government natural resource agencies:

- Habitat conservation planning (i.e., the identification of which sites should be conserved in their natural state to benefit wildlife);
- Permanent land protection (i.e., the acquisition of conservation easements or fee title to secure high priority sites); and C) Management of lands already in protected status. The goal for each of these activities is to encourage the conservation community to augment the dominant species-based approach to wildlife conservation with a focus on maintaining ecosystem functionality as climate change takes hold.
- The program has adopted three approaches to achieve its objectives: 1) Identifying resilient landscapes; 2) Protecting resilient landscapes; and 3) Managing conserved lands.

Eligible Applicants: nonprofits with tax-exempt status under Section 501(c)(3)

Funding Available: past grants ranged in the \$100K

Contact: <http://www.ddcf.org/what-we-fund/environment/>

Bonneville Environmental Foundation

Eligible Projects: renewable power and acquire, maintain, preserve, restore, protect, and/or sustain fish and wildlife habitat within the Pacific Northwest.

Interest area: Watershed Restoration Program---supports restoration of damaged watershed ecosystems; supports communities trying to heal their local watersheds by supporting watershed restoration projects grounded in the best available watershed science

Eligible Applicants: nonprofit organizations

Funding Available: varies

Contact: www.b-e-f.org

The Bullitt Foundation

Program priorities:

- Manage freshwater resources: control, use, distribution, conservation;
- Conserve and restore resilient watersheds, wetlands and estuaries;
- Maintain a working land base for sustainable agriculture and forestry;
- Enforce laws and policies intended to assure air and water quality;
- Create landowner incentives for maintaining and enhancing ecosystem services, including the development of market-based mechanisms.

Eligible Applicants: nonprofit organizations in Washington, Oregon, Idaho, western Montana, south-central Alaska, and British Columbia. Within that broad geographic range, work is targeted to specific sub-regions generally associated with major population centers.

Funding Available: varies---past grants ranged from \$10,000 to over \$600,000

Contact: <http://www.bullitt.org/>

Weyerhaeuser Foundation

Eligible Projects: forestry practices, manufacturing's effects on air, water and land; free trade, recycling, diversity, land conservation and environmental education; land acquisitions or conservation easement projects may fit with the Foundation's priorities and goals

Eligible Applicants: educational institutions, non-profit organizations, research institutions in Oregon and Washington

Funding Available: \$1,000 - \$50,000

Contact: <http://www.wfamilyfoundation.org/>

Laird Norton Foundation

Eligible Projects: projects contribute to a heightened awareness of the ecological, social and economic significance of water sources and watersheds. Preference will be given to projects which demonstrate innovative measures for protecting and restoring water resources and which involve local communities and/or regional institutions.

Eligible Applicants: nonprofit organizations working in Hood Canal (WA), Upper Deschutes (OR), and Rogue (OR) watersheds

Funding Available: varies; past grants ranged from \$10k to \$100k

Contact: <http://www.lairdnorton.org>

Alternative formats

Documents can be provided upon request in an alternate format for individuals with disabilities or in a language other than English for people with limited English skills. To request a document in another format or language, call DEQ in Portland at 503-229-5696, or toll-free in Oregon at 1-800-452-4011, ext. 5696; or email deqinfo@deq.state.or.us.

City of Grants Pass
00342

- This information supplements the Original Source Water Assessment Inventory dated between 2000 and 2005 and should be used in conjunction with the original inventory to provide a more detailed analysis of potential sources of pollution.
- Note that due to state database limitations, some sites will require further research to verify presence and location.
- This summary only includes potential sources of pollution within the estimated 8-hour time of travel area which is provided as a planning tool since eight hours should provide adequate response time to protect the integrity of the public water system intake after a spill or release at any crossing or discharge point to the stream. It is recommended the water system and community considers increased protection within this 8-hour travel time from the intake for spills and other acute risks. Focus may need to extend further upstream for contaminants that are contributed to the stream over long time periods or recur frequently.

Primary Land								Data Source
Multiple land uses, primarily urban (residential, municipal, commercial/industrial) near the intake, expending into rural, agricultural. private forestland and Federal (BLM) land uses.								Land use map - Figure 4
Other potential sources of								
Name				Address/location	City	County		Data Source
Drinking water treatment plant(s)								aerial photograph

APPENDIX B. Memorandum of Agreement - Rogue Drinking Water Partnership

Memorandum of Agreement – Rogue Drinking Water Partnership

February 3, 2020

I. Background

The overall goal of the Rogue Drinking Water Partnership (RDWP) is to protect sources of drinking water and improve drinking water quality in the Rogue River Basin by sustaining a collaborative partnership of drinking water providers and other organizations concerned with clean drinking water. Protecting the quality and quantity of our drinking water resources not only serves public health, but also benefits nature. It is the underlying intent of the RDWP to develop and support strategies designed to protect the lakes, streams, rivers and aquifers used for drinking water and the land which protects and recharges these sources of water. To ensure that the RDWP is useful to our members and other users, we have developed a Memorandum of Agreement (MOA), the ***Rogue Drinking Water Partnership Agreement***, between participating drinking water providers and other interested organizations committing to engagement and cooperation in drinking water source protection. This agreement was created through an open and collaborative process in RDWP meetings and discussions between members. This MOA asks for a commitment to engage and cooperate. A major benefit of the collaboration will be a common understanding of the greatest threats to drinking water sources and agreement on the highest priority actions to protect source water. This MOA describes the purpose, vision, structure, principles, operations and outputs of the RDWP.

II. Purpose and Vision of RDWP

The RDWP meets quarterly to share information, determine ways to effectively collaborate on mutually beneficial projects, assess RDWP progress on projects, and act in an advisory capacity on a wide range of decisions and products, such as current and projected water quality conditions; monitoring; data analysis; water quality treatment; agency initiatives and requirements; geographic areas of interest in the Rogue source watersheds; sociological and political areas of concern for drinking water; communications and public outreach plans, messages and means; technical assistance; training opportunities; grant funding; and identification of high priority collaborative projects, e.g., emergency response and contingency plans and programs.

RDWP Vision

- To foster closer relationships with each other.
- To collectively coordinate and obtain funding for source water protection efforts, public outreach and education.
- To realize economies of scale and save money by sharing in costs.
- To speak in one voice regarding drinking water resource issues.
- To protect the Rogue River Basin's drinking water resources to provide safe, sustainable drinking water for the benefit of all citizens.

The ***Rogue Drinking Water Partnership Agreement*** is:

- A living document to be maintained and modified by the RDWP.
- A procedural guide, describing the operation of the RDWP's collaborative work and how RDWP members commit to interact constructively in good faith.
- An informal, non-binding agreement among RDWP members.
- A public document, available for anyone to read and review. Comments about this document should be addressed to the RDWP Coordinator.

III. RDWP Structure, Composition

The RDWP is comprised of drinking water providers and other key interest groups that represent a wide set of sectors and perspectives. Organizations can become members of the RDWP by adopting this MOA and regularly attending RDWP meetings and activities. The following list includes organizations that have attended RDWP meetings and expressed interest in membership, but it is not an exhaustive list. Other organizations may become members of the RDWP by adopting the MOA and actively participating in RDWP meetings and activities.

RDWP organizations and team members:

Drinking Water Providers -

City of Ashland
City of Central Point
City of Eagle Point
City of Gold Hill
City of Grants Pass
City of Jacksonville
City of Phoenix
City of Rogue River
City of Talent
Medford Water Commission
Anglers Cove/Shady Cove Hiland Water Co.
Country View Mobile Home Estates

Other Organizations -

City of Cave Junction
City of Shady Cove
Jackson Soil and Water Conservation District
Oregon Department of Environmental Quality
Rogue River Watershed Council
Rogue Valley Council of Governments
Rogue Valley Sewer Services

Roles and Responsibilities

The RDWP will be coordinated by an organization or individual acceptable to all members of the RDWP. The Coordinator will be responsible for convening and facilitating meetings; summarizing meetings; soliciting, researching, and summarizing end user needs and feedback;

developing and disseminating RDWP-related materials; and other coordinating tasks as necessary.

RDWP organizations will appoint a member who will serve as the main point of contact to their respective organizations, gathering needs and suggestions from their organizations, keeping their organizations informed of relevant RDWP activities; and bringing information and perspectives from their organizations to inform RDWP business. Another person from the member organization will be able to fill in for the primary member if he or she is unable to attend a meeting or participate in an activity.

RDWP members are expected to read all meeting preparation materials before the meetings take place and to attend all meetings, if possible. Additional roles and tasks for individual RDWP members may be identified and agreed upon by the RDWP.

Meetings and Communications

Meetings will be held as frequently as the RDWP decides is useful to advancing the goals of the RDWP and ensuring a productive collaborative process. As of January 2020, the anticipated schedule is quarterly meetings of approximately 2 hours in length. All meetings will be held in locations convenient for the majority of the RDWP, and off-site participation will be made available upon request when possible.

Meeting notes will be drafted by the Coordinator and reviewed at the following meeting by the RDWP before being considered a part of the RDWP record or being distributed.

Each meeting will end with a brief and informal dialogue to ensure that progress is being made and that RDWP members feel that their time is used wisely.

In addition to regularly scheduled meetings, RDWP members may be asked from time to time to review documents, offer opinions, or consult individually or in groups with the Coordinator and other RDWP members.

IV. Operating Protocols

General Principles of Collaboration

Using the following general principles of collaboration, RDWP members agree to:

- Commit to expending the time, energy, and organizational resources necessary to meet objectives mutually agreed upon by the RDWP.
- Recognize the validity of differing points of view.
- Be prepared to listen intently to understand others' views.
- Regard disagreements as problems to be solved, not battles to be won.

Decision Making

RDWP members will strive for consensus when making decisions on substantive issues and recommendations. If consensus cannot be reached, decisions will be made on a super-majority vote (at least 2/3 of members present).

Conflict Resolution

Should disagreement arise among RDWP members (e.g., over data sources or interpretation, RDWP outputs, etc.), the group will strive to first resolve the disagreement internally with the assistance of the RDWP Coordinator. Should conflict remain, other appropriate conflict resolution methods will be explored, e.g., professional facilitation or mediation.

V. Outputs**Meeting Records**

Meeting agendas and meeting notes with action items, decisions, and recommendations will be distributed to RDWP members and kept by the Coordinator. These notes and other documents produced by the RDWP will serve as the sources of documentation for the collaborative process. RDWP members must review and refine these notes and documents before they are made public.

Needs Assessment

RDWP members and Coordinator will gather input from RDWP members and draft a concise needs assessment describing the RDWP niche in drinking water source protection, including primary measurable objectives, existing organizations and programs, barriers, target audiences, etc. The role of the RDWP is to provide feedback and input on drafts, to agree that the documents accurately reflect pressing needs, and to recommend findings from this needs assessment to be incorporated into the next stages of RDWP development.

RDWP Action Plan

An Action Plan will be developed by the RDWP identifying short- and long-term high priority measures for collaborative source water protection to be implemented by the RDWP and its members. The Action Plan will identify measures that:

- Prevent, minimize and mitigate activities that have known or potentially harmful impacts on drinking water quality.
- Promote public awareness and stewardship of drinking water sources and healthy watersheds in collaboration with other stakeholders.
- Develop resources and financial support for RDWP Action Plan implementation.

The Action Plan will be reviewed and revised as needed on a five-year basis.

APPENDIX C. Conceptual Model - Risk Matrix

Conceptual Model – Risk Matrix

Using interactive maps* from the City of Grants Pass (City) and the source water assessments (SWA) for Grants Pass from the Oregon Department of Environmental Quality (ODEQ), the following components and scoring were created to identify high priority potential contaminant sources (PCS). As a result of using this risk matrix, site-specific best management practices (BMP) recommendations will be determined for each high priority PCS within Grants Pass, which the City may offer to businesses in order to protect drinking water quality.

*The interactive maps used included the Public Works – Water, Sewer and Stormwater Systems and Hazards – Fire, Flood, Earthquake, & Steep Slope, which can be found here:

<https://grantspassoregon.maps.arcgis.com/home/index.html>.

Scoring Ranges:

- 1 – 4: Low (L) risk; green circle on map*
- 5 – 8: Moderate (M) risk; yellow circle on map*
- 9 – 13: High (H) risk; red circle on map*

Colored circles will also be labeled with either an “A,” for area of interest, or “P,” for point of interest on the associated map.

1. Stormwater Basin:

Score:	General Description:
0	Gilbert/Allen/Sand creeks are downstream of the drinking water intake
1	“Needs Basin ID” is upstream of the drinking water intake, but does not cover any urban or industrial areas
2	Jones Creek is farther upstream from the city center, but does cover industrial areas
3	Skunk/Fruitdale creeks cover the city center, industrial areas, and are both mostly upstream of the drinking water intake

Stormwater Basin Data from the Interactive Maps, City of Grants Pass.

2. Proximity to Waterway (river, tributary, irrigation canal):

Score:	General Description:
0	1,500' and beyond
1	1,001' – 1,499'
2	501' – 1,000'
3	0 – 500'

3. Surface Water (SW) Risk:

Score:	General Description:
0	Low (L) risk
1	Medium (M) risk
2	High (H) risk

Surface Water (SW) Risk Data from the SWAs, ODEQ.

4. Flood Hazard:

Score:	General Description:
0	Beyond the flood hazard area
1	500-year flood
2	100-year flood
3	Floodway

Flood Hazard Data from the Interactive Maps, City of Grants Pass.

5. Jurisdiction:

Score:	General Description:
1	Outside the urban growth boundary (UGB)
2	Inside the UGB

Jurisdiction Data from the Interactive Maps, City of Grants Pass.

APPENDIX D. Directions - Applying the Risk Matrix to GIS

Rogue Drinking Water Partnership

Directions – Applying the Risk Matrix to GIS

Amie Siedlecki

7/30/19

Area of Interest:

1. Start the “Editor” tool,
2. Create a CityName_AOI polygon layer by clicking on four points on the map (creates a square or rectangular area) that captures both the City Limits and/or Urban Growth Boundary (UGB) layers,
3. Stop editing, and
4. Clip all layers to be completely within the CityName_AOI.

PCS (Surface Water Risk):

1. Select by location,
2. Use RDWP_PCS layer,
3. Select “completely within” the AOI layer, and
4. Create a new layer: RDWP_PCS_selection (rename if needed).

Proximity to Waterway:

1. Turn on both the Ditches and Waterlines layers,
2. Create one layer that combines the two layers,
3. Select by location,
4. Use the combined Ditches and Waterlines layer,
5. Select “completely within” the AOI layer,
6. Use the “Buffer” tool to create 500 ft., 1,000 ft., and 1,500 ft. buffers around the CityName_AOI_Water layer. (500 ft., FULL, FLAT; 1,000 ft., FULL, FLAT; 1,500 ft., FULL, FLAT, etc.),
7. Save each layer as CityName_500ft_Buffer, CityName_1000ft_Buffer, CityName_1500ft_Buffer, etc.
8. Use the “Overlay Analysis – Overlay Erase” tool to erase the 1,000 ft. buffer from the 1,500 ft. buffer, and the 500 ft. buffer from the 1,000 ft. buffer, which separates each buffer out from the others. (Example: 1,500 ft. is the input, 1,000 ft. is the layer to be erased; larger number erases the smaller number).

Floodplain (Flood Hazard):

1. Turn on the Floodplain layer,
2. Use the “Clip” tool to show only the Floodplain area that lies within the AOI layer, and
3. Create a new layer: CityName_Floodplain.
4. Select by attributes to visually show the “floodway,” “100-year flood zone,” “500-year flood zone,” and beyond: “Flood” = “Floodway,” etc., and
5. Create a selection layer for each of the flood zones.

Attribute Table Preparation:

1. Using the “Editor” tool, add risk component column headers into the original RDWP_PCS layer attribute table: SWScore, Jurisd., Proximity, and Floodzone,
2. Select by attributes,
3. Use RDWP_PCS layer,
4. Select “H” risk “within” the CityName_500ft_Buffer,
5. Enter the scores associated with where the PCS fall on the map,
6. Repeat for CityName_1000ft_Buffer and CityName_1500ft_Buffer, as well as “M” risk,
7. Use the “Editor” tool to add scores into the attribute tables, save, and “Stop Editing,”
8. Merge the “H” and “M” PCS into one shapefile,
9. Export data to an Excel spreadsheet, and
10. Create a “Total Score” column in Excel and add up the scores to determine overall risk and where windshield surveys will be conducted.

APPENDIX E. Windshield Survey Sites

Grants Pass Stormwater Project

Windshield Survey Sites

Amie Siedlecki

12/30/18

Visited in the Following Order:

1. Swiss Metric – 1610 Parkdale.
2. Parkdale Subdivision – Established at time of survey; no perceived surface water (SW) risk.
3. Jerry's Appliance and Repair – 1077 Rogue River Highway; closed.
4. Automania Car Sales – 1455 Rogue River Highway; moved to Gladiola.
5. Brakes Plus – 1499 Rogue River Highway.
6. High density housing – 1560 Hamilton Lane – Established at time of survey; no perceived SW risk.
7. Heating Oil Tank – 1560 Hamilton Lane; could not find.
8. Unknown Operation – Hamilton Lane; could not find.
9. Clovercrest Service Center – 2600 Cloverlawn Lane; now NAPA Autocare Center.
10. Panoramic Loop Construction – Established at time of survey; no perceived SW risk.
11. Willow Development – 2221 Haviland – Established at time of survey; no perceived SW risk.
12. Grants Pass Irrigation District (GPID) Easement – 2202 Haviland.
13. Powell Distributing – 1919 Rogue River Highway; now Timber Mountain Construction, Inc.
14. Robco/Three Rivers Paving – 1935 Rogue River Highway; now Timber Mountain Construction, Inc.
15. Big Sam's Auto Repair – Highway 99; could not find.
16. Heating Oil Tank – 1980 Rogue River Highway; could not find.
17. Muffler King/A-1 Exterminators – 1492 Rogue River Highway; closed.
18. High density housing – SE Mystic Drive – Established at time of survey; no perceived SW risk.
19. Caveman RV – 1182/1190 Rogue River Highway.
20. Gary Peterson – 910 SE M Street.
21. Auto Wrecker – M Street; could not determine by listing.
22. Warehouse Rebuilding – 961 SE N Street; moved to Gladiola.
23. Grants Pass Equipment Rentals – 851 SE Milbank; now Southern Oregon Tire.
24. Oregon Swiss Precision – 1080 SE M Street; moved. Now Caveman Fence.
25. Timber Products Company – 1090 SE M Street.
26. Indian Creek Auto Dismantlers – 1098 SE M Street.
27. Cabinet Crafters – 1586 SE N Street; could not find.
28. Umpqua Dairy Products Company – 1686 SE N Street.
29. Ferguson Fabrication – 959 Gladiola; moved. Now Warehouse Rebuilders.
30. Grants Pass School District 7 – 1053 Gladiola.
31. Clearwater Co-op – 1130 Gladiola; appeared closed.
32. Gladiola Campus – 1137 Gladiola.
33. Riverside Elementary School – 1200 Harvey.
34. Spalding and Son – 2345 SE N Street; also on Spalding Ave.
35. Roger Hansen – 450 Ament; could not find. Illegal dump site on the other side of the road.
36. RV Marble/Castle Marble and Granite LLC – 2375 Foothill Boulevard.
37. Oregon Department of Transportation – 345 Agness.
38. Edgewater Christian Office – 101 Assembly Circle – Established at time of survey; no perceived SW risk.
39. Edmond Corporation/Schnitzer Steel – 605 Agness; moved.

APPENDIX F. Source Water Protection Inspection Worksheet

**Grants Pass Stormwater Project:
Source Water Protection Inspection Worksheet**

Facility Information	
Facility Name	
Facility Address/Phone Number	
Receiving Waterbody	

General Information		
Date	Name(s)	
Weather Conditions	Time	

Site Information	
Facility Description	
Activity at Site	

**Grants Pass Stormwater Project:
Source Water Protection Inspection Worksheet**

Observations:

Item		Notes/Describe Observation
Evidence of visual sheen (oil/grease) on ground or other surfaces?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Evidence of spilled materials ? Note location, substance, and container.	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Evidence of erosion , water movement, pooling water?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Bulk storage areas present (tanks, drums, pallets, other materials/supplies, etc.)?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Loading/unloading or shipping/receiving areas present?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> Covered? Yes No <input type="checkbox"/> <input type="checkbox"/>	
Are raw materials , intermediate product, by-product, and/or final product storage on site?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	

Item		Notes/Describe Observation
Evidence of excavation or ground disturbance?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Vehicle maintenance areas present?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Gas, oil, and grease storage and management areas present?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Chemical storage and management areas present? Describe.	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Any erosion and sediment control features ? Are they functioning?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> Functioning? Yes No <input type="checkbox"/> <input type="checkbox"/>	
Storm drains or catchment basins present?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> Functioning? Yes No <input type="checkbox"/> <input type="checkbox"/>	
Wash and drainage areas present? Describe plumbing of wash area: Sanitary? Storm? Unknown?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
How was plumbing verified? Verbal? Dye test? As-builts?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	

Stormwater Runoff		
Was stormwater discharging from the site at time of inspection?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	If yes, describe volume (estimated CFS), color, and odor:
Does there appear to be any stormwater BMPs in place?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
If there are BMPs, are they functioning as intended?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	
Other notes		

Stormwater Controls Observed	
Control Measures Observed (BMPs)	<input type="checkbox"/> Catch basin or other inlet treatment/filter system <input type="checkbox"/> Oil/water separator <input type="checkbox"/> On-site bio-swale <input type="checkbox"/> Constructed wetlands <input type="checkbox"/> Roof downspout (gutter) treatment/filter system <input type="checkbox"/> Dumpster and equipment cover <input type="checkbox"/> Drum and container containment <input type="checkbox"/> Sweeping (manual or mechanical) <input type="checkbox"/> Stormwater diversion <input type="checkbox"/> Vegetated buffer zone <input type="checkbox"/> Storm treatment system (stormwater is sent to the log pond) <input type="checkbox"/> Multi-chambered treatment train

Stormwater Pollution Control Plan (SWPCP) or Spill Plan			
Is there a SWPCP?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		
Is there a spill prevention and response plan?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		
Are employees aware of and understand spill plan?	Yes No N/A <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		

APPENDIX G. BMP Database

PCS Code	Activity at Site	SW Risk	BMP Code	BMP Name
A03	Confined Animal Feeding Operations (CAFOs)	H	BMP17	Stormwater Wetland

BMP Code	BMP Name	BMP Description	Type	Source	Cost	Vendor(s)
BMP1	Check Dam	Small dam to reduce erosion and settling of suspended sediments. Constructed of washed rocks, gravel bags, silt dikes, cobags, or sandbags.	Runoff Controls	ACWA		
BMP2	Diversion of Run-On	Diversion structures that divert runoff away from sloping land or sensitive areas.	Runoff Controls	ACWA		
BMP3	Preservation of Existing Vegetation	Vegetated buffers that protect sensitive areas (i.e. wetlands, streams, and lakes). Protect soil infiltration capacity, stream shade, wildlife habitat, and scenic views.	Erosion Prevention	ACWA	-	-
BMP4	Mulches	Prevents erosion, promotes germination, and protects seeds from direct heat and being carried away by runoff.	Erosion Prevention	ACWA, HomeGuide (for costs)	\$15 - \$65 per yard	
BMP5	Seeding and Planting	Well-established vegetation reduces erosion.	Erosion Prevention	ACWA	-	Plant Oregon, Shooting Star Nursery.
BMP6	Erosion Blankets and Mats	Covers the soil to prevent erosion and assist in the establishment of vegetation.	Erosion Prevention	ACWA, Minnesota Stormwater Manual (for costs)	\$1.02 - \$2.90 per square yard	The Home Depot, Lowes, GEI Works, East Coast Erosion Control, GeoSolutions, Inc., Grainger, Inc.
BMP7	Entrance/Exit Tracking	Helps prevent the tracking of soil onto public and private roadways that could flow into stormwater conveyance systems or surface waters. Stabilized rocks pads, plates, panels, and other structural systems are used.	Sediment Controls	ACWA, Minnesota Stormwater Manual (for costs)	\$5,763.08	FODS Trackout Control Mats, Presto GeoSystems, Rubberform, GEI Works, Niles.
BMP8	Sediment/Silt Fence	Temporary sediment trap made of filtering geotextile fabric stretched between and attached to support posts. Treats overland/sheet flow.	Sediment Controls	ACWA, EPA	\$1.14 - \$4.88 per linear foot	
BMP9	Inlet Protection	Devices that filter course sediments from runoff, preventing them from entering storm drainage systems.	Sediment Controls	ACWA	-	
BMP10	Fiber Rolls or Wattles	Intercepts and captures sediment entrained in sheet flow. Light-weight and easy-to-install. Applied on steep slopes and for inlet protection.	Sediment Controls	ACWA, After Wildfire - A Guide for New Mexico Communities	\$1,100 - \$4,000 per acre	
BMP11	Concrete Management	Prevents or reduces discharge of pollutants to stormwater from concrete waste.	Pollution Prevention	ACWA		
BMP12	Stockpile and Materials Management	Stockpile management reduces or eliminates the discharge of pollutants to stormwater. Materials management prevents or reduces discharge of pollutants to stormwater from material delivery and storage by minimizing the storage of hazardous materials on site, storing materials in a designated area, installing secondary containment, conducting regular inspections, and training employees and subcontractors.	Pollution Prevention	ACWA	-	-
BMP13	Emergency Spillway	Vegetated channels, pipes, or culverts with a bottom width of greater than 10 feet and a level section of 30 feet or more. Excavations should be done on undisturbed soil rather than fill material.	Runoff Controls	Minnesota Pollution Control Agency	-	-
BMP14	Wet Pond	Stores stormwater until new runoff enters. Provides water quality treatment by allowing suspended solids to settle to the bottom.	Runoff Controls	Minnesota Pollution Control Agency		
BMP15	Wet Extended Detention Pond	Combination of permanent pool storage and extended detention storage. Provides water quality and rate control. Water from large storm events is captured and released slowly over a period of time. Allows for settling of suspended solids and keeps flow rates in check.	Runoff Controls	Minnesota Pollution Control Agency		
BMP16	Dry Pond	No permanent pool. Rely upon extended detention storage for treatment. Highly susceptible to sediment re-suspension, but can be useful for flow rate control.	Runoff Controls	Minnesota Pollution Control Agency		
BMP17	Stormwater Wetland	Constructed wetland with varying water depths and vegetation. Vegetation can remove pollutants, but requires care to protect plant life for long-term operation.	Runoff Controls	Minnesota Pollution Control Agency		
BMP18	Infiltration Trench	Shallow excavated trench, 2 to 10 feet wide and 2 to 4 feet deep, filled with a coarse stone aggregate. Provides temporary stormwater runoff storage before infiltrating into the sub-surface soil.	Runoff Controls	Minnesota Pollution Control Agency		
BMP19	Infiltration Basin	Captures and temporarily stores stormwater runoff while allowing it to infiltrate into sub-surface soils. Rather than stored within a stone aggregate, water is stored in a basin.	Runoff Controls	Minnesota Pollution Control Agency		
BMP20	Bio-Retention Practices	Rain gardens and enhanced vegetation swales. Similar to infiltration basins, but smaller in size, shallower in depth, and captures stormwater underground in pipes or tanks and allows stormwater to infiltrate into sub-surface soils through	Runoff Controls	Minnesota Pollution Control Agency, Reduce Runoff, Interstate	\$10 - \$40 per square foot	-
BMP21	Underground Infiltration Devices	Captures stormwater underground in pipes or tanks and allows stormwater to infiltrate into sub-surface soils through	Runoff Controls	Minnesota Pollution Control Agency		
BMP22	Hydrodynamic Separators	Small, flow-through devices that remove sediment, trap debris, and separate floating oils from runoff. Designed to	Runoff Controls	Minnesota Pollution Control Agency		
BMP23	Catch Basin Media Inserts	Installed in a storm drain inlet. Filters contaminants out of runoff entering the inlet. Alternative to conventional oil-	Runoff Controls	Minnesota Pollution Control Agency, Environmental Review Toolkit	\$100 - \$1,500 per unit	Advanced Drainage Systems, Inc.,
BMP24	Filtration Systems	Proprietary stormwater treatment devices which use a filter media. Filter media can be specific to certain pollutants.	Runoff Controls	Minnesota Pollution Control Agency	-	Hydro International, Contech
BMP25	Infiltration Systems	Proprietary system devices that are often buried underground, allowing stormwater to drain through them on the way	Runoff Controls	Minnesota Pollution Control Agency		
BMP26	Porous Pavement	Allows stormwater to infiltrate the pavement and enter the soil. This removes fine grain pollutants and provides erosion	Runoff Controls	Rouge River National Wet Weather Demonstration Project		
BMP27	Clean and Maintain Storm Drainage System	Clean and maintain catch basins annually, or more frequently at sites with activities generating a lot of sediment and	Sediment Controls	King County Stormwater Services	-	-
BMP28	Stormdrain Inlet Labels	Stencil or apply stormdrain markers adjacent to stormdrains to help prevent improper disposal of pollutants.	Pollution Prevention	King County Stormwater Services		
BMP29	Illicit Connection Identification and Elimination	Illicit connections convey substances other than stormwater (internal floor drains, HVAC systems, industrial processes,	Pollution Prevention	King County Stormwater Services		
BMP30	Spill and Leak Prevention	Visually inspect vehicles entering the facility for leaks.	Pollution Prevention	Sustainable Conservation		
BMP31	Spill Clean-Up	When spills and leaks happen, clean up as much of the fluid as possible using dry methods (i.e. cat litter).	Pollution Prevention	Sustainable Conservation		
BMP32	Proper Fluids Handling	After removing vehicle fluids, store the fluids in clearly marked containers. This applies to other types of fluids, as well.	Pollution Prevention	Sustainable Conservation		
BMP33	Drain, Cover, and Contain Oily Parts Stored Outside	If storing oily parts outside or in vehicles that are outside, ensure that they are covered to prevent contact with rain or	Pollution Prevention	Sustainable Conservation		
BMP34	Equipment Maintenance	Schedule and perform periodic inspections of equipment.	Pollution Prevention	Sustainable Conservation		
BMP35	Pave Refueling Areas	Pave refueling areas with concrete to prevent contamination of the soil and to enable clean-up.	Pollution Prevention	Sustainable Conservation		
BMP36	Housekeeping	Sweep and clean paved surfaces daily to reduce sediment and contaminant build-up.	Pollution Prevention	Sustainable Conservation	-	-
BMP37	Proper Wash Water Disposal	Wash water from equipment, work areas, or shop floors cannot come into contact or mix with rainfall or surface	Pollution Prevention	Sustainable Conservation		
BMP38	Vehicle Owner Education	Inform customers who remove parts to do so properly and to appropriately dispose of fluids.	Pollution Prevention	Sustainable Conservation		
BMP39	Proper Grease and Oil Disposal	Recycle grease and oil instead of pouring down sinks, floor drains, and/or into parking lots and streets.	Pollution Prevention	Environmental Services, City of Portland		
BMP40	Dumpster Maintenance	Keep dumpster areas clean and the lids closed. Don't fill with liquid waste or hose them out.	Pollution Prevention	Environmental Services, City of Portland	-	-
BMP41	Minimize Chlorinated Cleaners and Solvents	Effective non-chlorinated cleaners are available for all jobs. See if one or two general, less-toxic cleaning materials can	Pollution Prevention	Oregon Department of Environmental Quality		
BMP42	Properly Working Portable Toilets	Make sure portable toilets are in good working order and not leaking.	Pollution Prevention	EPA - Midwest Research Institute		
BMP43	Water Conservation	Use as little water as possible for dust control.	Pollution Prevention	EPA - Midwest Research Institute		
BMP44	Proper Timing for Construction	Schedule excavation and grading activities for dry weather periods.	Pollution Prevention	EPA - Midwest Research Institute		
BMP45	Reduce Soil Compaction	Use gravel approaches to reduce soil compaction and limit the tracking of sediments into streets.	Sediment Controls	EPA - Midwest Research Institute		
BMP46	Downspout Extenders	Prevents erosion from roof runoff and allows for groundwater recharge.	Erosion Prevention	University of Wisconsin - Extension	~\$5 - ~\$50 per unit	The Home Depot, Lowes, Menards,
BMP47	Proper Garden and Lawn Maintenance	Do not over-water, place clippings and pruning waste in approved containers for pick-up, do not blow or rake leaves	Pollution Prevention	EPA - Midwest Research Institute	-	-
BMP48	Use Pesticide Alternatives	Utilize Integrated Pest Management: physical controls (caulking holes, using traps, etc.), biological controls (predatory	Pollution Prevention	EPA - Midwest Research Institute		
BMP49	Secondary Containment	Use berms, spill containment pallets, double-walled containers, etc. around machines and barrels that may leak,	Pollution Prevention	Santa Clara Valley Urban Runoff Pollution Prevention Program	~\$50 - \$3,000/unit	Instate Products, ULIN, New Pig,
BMP50	Proper Hazardous Waste Disposal	Metalworking fluids that can't be recycled, cleaning solutions, and absorbent materials used to clean up those fluids	Pollution Prevention	Santa Clara Valley Urban Runoff Pollution Prevention Program		
BMP51	Materials Safety Data Sheets (MSDS) On-Hand	Obtain MSDS for all chemicals and metals stored in the facility and keep them accessible at all times.	Pollution Prevention	Santa Clara Valley Urban Runoff Pollution Prevention Program		
BMP52	Site Stabilization	Vegetate, mulch, or otherwise stabilize all exposed areas as soon as land alternatives have been completed.	Sediment Controls	EPA, HomeGuide (for mulch costs)	\$15 - \$65 per yard	The Home Depot, Ground Control,
BMP53	Protecting Slopes	Rough grade or terrace slopes. Break up long slopes with sediment barriers, or under drain, or divert stormwater away	Sediment Controls	EPA (for silt fence costs), After Wildfire - A Guide for New Mexico	\$1.14 - \$4.88 per linear foot	The Home Depot, Grainger, Inc.,

Definitions
Erosion Prevention: Used to prevent the movement of soils.
Pollution Prevention: Used to prevent pollution from reaching the storm drain system or waterbodies.
Runoff Controls: Used to divert and control drainage at a site.
Sediment Controls: Used to manage soils and debris that are moving.

Activity at Site
Above Ground Storage Tanks-Excluding Water Tanks and Residential ASTs
Aboveground Storage Tanks - Residential
Apartments and Condominiums
Auto - Body Shops
Auto - Car Washes
Auto - Gas Stations
Auto - Gas Stations - Historic
Auto - Repair Shops
Automobiles - Body Shops
Automobiles - Gas Stations
Boat Services/Repair/Refinishing
Campgrounds/RV Parks
Cement/Concrete Plants
Cemeteries - Pre-1945
Chemical/Petroleum Processing/Storage
Communications Office
Confined Animal Feeding Operations (CAFOs)
Construction Company
Construction/Demolition Area
Crops - Irrigated - Berries, Hops, Mint, Orchards, Vineyards/Nurseries, Green Houses, Vegetables, etc.
Crops - Nonirrigated - Christmas Trees, Grains, Grass Seeds, Hay, Pasture
Drinking Water Treatment Plants
Dry Cleaners
Electrical/Electronic Manufacturing
Fire Station
Fleet/Trucking/Bus Terminals
Furniture/Lumber/Parts Stores
Graywater reuse/disposal or Industrial reuse
Grazing Animals - > 5 Large Animals or Equivalent/Acre
Historic Waste Dumps/Landfills
Home Manufacturing
Homesteads - Rural - Septic Systems < 1/Acre
Housing - High Density - > 1 House/0.5 Acres
Industrial/Commercial Injection Wells/Drywells/Sumps - Class V UICs
Irrigation Canal/Pond
Junk/Scrap/Salvage Yards
Known Contamination listed as NFA (Sites/Plumes/Spills from ECSI)
Known Contamination Sites/Plumes/Spills (ECSI)
Lagoons/Liquid Wastes - Municipal/Industrial Wastewater Treatment
Large Capacity Septic Systems -Class V UIC (serves >20)
Lawn Care - Highly Maintained Areas
Machine Shops
Maintenance Shop/Equipment Storage - Not Transportation Related
Maintenance Shop/Equipment Storage - Transportation Related
Managed Forest Lands - Clearcut Harvested - < 35 yrs
Medical/Vet Offices
Metal Plating/Finishing Fabrication
Mining Activities - Active - sand/gravel/rock/soil
Mining Activities - Gravel Mines/Gravel Pits
Mining Activities - Inactive - other than sand/gravel/rock/soil
Mining Activities - Inactive - sand/gravel/rock/soil
Miscellaneous Equipment Maintenance
Miscellaneous Manufacturing
Municipal/Industrial Landfill
Parking Lots/Malls - > 50 Spaces
Parks
Pesticide/Fertilizer/Petroleum Storage, Handling, Mixing, & Cleaning Areas
Photo Processing/Printing
Pipelines - Chemical and Petroleum
Plastic/Synthetics Producer
Ponds/Streams/Wetlands
River Recreation - Heavy Use (inc Campgrounds)
RV/Mini Storage
Schools
Septic Systems - High Density - > 1/Acre
Sewer Lines - Close Proximity to PWS
Stormwater Wastewater Injection/Dry Wells, Sumps - Class V UICs
Surface Water on 303d list
Transmission Lines - Right-of-Ways
Transportation - Railroads
Transportation Corridors - Freeways/Highways or other heavy use roads
Transportation Corridors - High Use Roads/Streets
Transportation Corridors - Railroads
Transportation Corridors - Stream Crossing - Perennial
Unknown Operation
Upstream Reservoirs/Dams
UST - Confirmed Leaking but listed as NFA - DEQ LUST List
UST - Confirmed Leaking Tanks - DEQ LUST List
UST - Decommissioned - Inactive
UST - Status Unknown
UST - Upgraded and/or Registered - Active
Utility Stations - Maintenance/Transformer Storage (Inc. Hydroelectric Power Equip.)
Warehouses
Wastewater Treatment Plants/Collection Stations
Wells - Abandoned
Wells - Production
Wood/Pulp/Paper Processing and Mills
